Surface Water Quality Have The Laws Been Successful:

Surface Water Quality Ruth Patrick, Faith Douglass, Drew M. Palavage, Paul M. Stewart, 2014-07-14 Addressing ecologists legislators lawyers and industrialists alike Ruth Patrick asks what has been accomplished with the millions of dollars spent on upgrading our surface waters Has the water improved in spite of the fact that the crayfish snails and algae are not those that one would expect to find in natural rivers and estuaries To evaluate the success of environmental laws over the past two decades the author examines the aquatic life of river systems in the Delaware Valley Texas and Georgia the only areas in the United States where she found enough biological data to determine trends over time Although tracing the impact of environmental laws is difficult Patrick found that for these three water systems the results were generally positive However if society as a whole wants effective environmental legislation organizations must take on a more systematic and orderly approach to data gathering Patrick argues that in monitoring the waters one must study protozoa algae and worms as well as fish oysters and shrimp one must track amounts of metal as well as low concentrations of oxygen In proposing options for the future the author predicts that the cost of such monitoring will be higher than present expenditures but the cost of lax control will be even greater Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 *Regulating Water Quality* Joe Makuch, 1993 **Protecting the nation's groundwater from contamination** United States.
