Pollack, Mildred Shapley Matthews, 1989 An integrated discussion of the similarities and differences between the atmospheres of various bodies of the solar system including the Earth *Surfaces and Interiors of Planets and Satellites* Audouin Dollfus, 1970 **Surfaces and interiors of planets and satellites. Ed. by A[udouin] Dollfus**, 1970 *Origin and Evolution of Planetary and Satellite Systems* Dierich Möhlmann, Heinz Stiller, 1989-12-31 No detailed description available for Origin and Evolution of Planetary and Satellite Systems **D.R.D.A. Reporter**, 1992 **Planetary Cartography in the Next Decade (1984-1994)** United States. National Aeronautics and Space Administration. Planetary Cartography Working Group, 1984 The cartographic products required to support science and planetary exploration during the next 10 years were assessed Only major map series or first order maps needed to characterize the surface physiography of a planet or satellite were considered Included in these considerations are maps needed as bases for plotting geologic geophysical and atmospheric phenomena and for planning future planetary exploration These products consist of three types of maps controlled photomosaics shaded relief maps and topographic contour maps *Treatise on Geophysics*, 2015-04-17 *Treatise on Geophysics* Second Edition is a comprehensive and in depth study of the physics of the Earth beyond what any geophysics text has provided previously Thoroughly revised and updated it provides fundamental and state of the art discussion of all aspects of geophysics A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution Additional features include new material in the Planets and Moon Mantle Dynamics Core Dynamics Crustal and Lithosphere Dynamics Evolution of the Earth and Geodesy volumes New material is also presented on the uses of Earth gravity measurements This title is essential for professionals researchers professors and advanced undergraduate and graduate students in the fields of Geophysics and Earth system science Comprehensive and detailed coverage of all aspects of geophysics Fundamental and state of the art discussions of all research topics Integration of topics into a coherent whole

Treatise on Geophysics, Volume 10 Tilman Spohn, 2010-05-20 *Planets and Moons* covers topics relating to the physics of the major planetary bodies in the solar system starting with an introductory description of the solar system and collection of pertinent data continuing with a discussion of the early history of the planets and finishing with articles about planet dynamics thermal evolution of planets and satellites and descriptions of their magnetic fields and the processes that generate them In addition to providing a review on the solid planets and the satellites this volume addresses the interactions of solid surfaces and atmospheres as well as the roles of water and ice in shaping the surfaces of planetary bodies Self contained volume starts with an overview of the subject then explores each topic with in depth detail Extensive reference lists and cross

references with other volumes to facilitate further research Full color figures and tables support the text and aid in understanding Content suited for both the expert and non expert International Aerospace Abstracts ,1987 **Literature**

Jay Melosh,2011-08-25 Planetary Surface Processes is the first advanced textbook to cover the full range of geologic processes that shape the surfaces of planetary scale bodies Using a modern quantitative approach this book reconsiders geologic processes outside the traditional terrestrial context It highlights processes that are contingent upon Earth's unique circumstances and processes that are universal For example it shows explicitly that equations predicting the velocity of a river are dependent on gravity traditional geomorphology textbooks fail to take this into account This textbook is a one stop source of information on planetary surface processes providing readers with the necessary background to interpret new data from NASA ESA and other space missions Based on a course taught by the author at the University of Arizona for 25 years it is aimed at advanced students and is also an invaluable resource for researchers professional planetary scientists and space mission engineers **Planetary**
