Surfactant Aggregation:

Surfactant Aggregation J.H. Clint, 2012-12-06 Surface Active Agents surfactants are vital components in biological systems form key ingredients in consumer products and play an important role in many industrial processes For example cell membranes owe their structure to the aggregation of surfactants known as lipids which form a major component of the membrane Other natural surfactants occur in the digestive system in the lungs and even in such substances as crude oil Man made surfactants are used in a wide range of domestic and industrial products and processes In addition to detergents and personal care products surfactants have found uses in almost every branch of the chemical industry as well as in several other industries These include dyestuffs fibres mineral processing oil field chemicals paints pesticides pharmaceuticals and plastics Surfactants are versatile materials which are manufactured in a huge variety of forms to suit all of these applications As a result of their importance the technical literature on all aspects of surfactant behaviour is now very extensive

Surprisingly however the treatment in textbooks has been somewhat fragmented often in the form of conference proceedings or edited multi authored works both lacking in continuity

Surfactant Aggregation John H.

Clint, 1992 Surface active agents surfactants occur widely in nature being found in locations as different as the membranes of living cells and in crude oil Compounds in this class are surface active because of their amphiphilic nature A consequence of this is that they have a remarkable tendency to aggregate in a variety of forms whose exact structures depend on the state of solvency and on some simple but at times subtle geometric packing considerations

industries In the past 15 years however the situation has radically changed and we have witnessed a drastic increase in the number of publications on the electrochemistry of immiscible electrolytes We are glad to note that the investigations show not only a quantitative but also a qualitative change The theoretical works on the oil water interface test not only the thermodynamic aspects of the interface but also recreate the molecular picture of the process Along with the now conventional oilwater system electrochemical studies are made on various membranes including the finest bilayer lipid membranes and also on microemulsion systems A prominent place in the investigation of the oil water interface is occupied by photoprocesses that come into play at the interface between two ionic conductors

Surfactants in Solution K.L. Mittal,P. Botherel,2013-03-09 This and its companion Volumes 4 and 6 document the proceedings of the 5th International Symposium on Surfactants in Solution held in Bordeaux France July 9 13 1984 This symposium was the continuation of the series of symposia initiated in 1976 in Albany New York under the title Micellization Solubilization and Microemulsions The next two symposia were labelled Solution Chemistry of Surfactants and Solution Behavior of Surfactants Theoretical and Applied Aspects held in Knoxville TN in 1978 and Potsdam N Y in 1980 respectively In 1982 at the time of the 4th Symposium in this series it became amply evident that there was a definite need to have more a generic title to describe these biennial events and after much deliberation it was decided that an appropriate title would be Surfactants in Solution as both the aggregation and adsorption aspects of surfactants were addressed So the 4th Symposium was held in 1982 in Lund Sweden under this new rubric and it was decided to continue these symposia in the future under this appellation Naturally the Bordeaux Symposium was dubbed as the 5th International Symposium on Surfactants in Solution and our logo became SIS which is very apropos and appealing It was in Bordeaux that the decision was made to hold the 6th SIS Symposium in New Delhi and it is scheduled for August 18 22 1986 in the capital of India *Surfactants in Cosmetics*
