

# INFERENCE

Inference is a cognitive process whereby we derive conclusions, assumptions, predictions, and explanations based on our interpretations of observable data.

## OVERVIEW

The process of inferring something serves us well because it helps us make guesses and estimates, predict outcomes, and come to well-founded assumptions that can inform our decision-making.

It enables us to make sense of the world around us based on a combination of observation and prior knowledge.

## EXAMPLES

Sherlock Holmes draws conclusions from small observations in their surroundings. A speck of mud on a person's shoe, for example, could lead Holmes to infer the individual recently visited a specific location. There's room for error here, but Sherlock feels confident based on his prior experience and skillset.

Zackariasson, 2014-07-23 This collection explores whether and how religious and secular worldviews and political ideologies held by scientists citizens decision makers and politicians influence science as practiced and understood today Contributors explore the social and scientific repercussions of customizing science to fit the needs and interests of various groups

*Ernan McMullin and Critical Realism in the Science-Theology Dialogue* Paul L. Allen, 2016-05-13 Scientists philosophers and theologians have wrestled repeatedly with the question of whether knowledge is similar or different in their various understandings of the world and God Although agreement is still elusive the epistemology of critical realism associated with Ian Barbour John Polkinghorne and Arthur Peacocke remains widely credible Relying on the lifetime work of philosopher Ernan McMullin this book expands our understanding of critical realism beyond a permanent stand off between the subjective and objective whether in science or theology Critical realism illuminates the subject and the objectively known simultaneously Responding to criticisms made against it this book defends critical realism in science and theology with a specific role to play in our understanding of God      **Creation and the God of Abraham** David B. Burrell, Carlo

Cogliati, Janet M. Soskice, William R. Stoeger, 2010-09-02 Creatio ex nihilo is a foundational doctrine in the Abrahamic faiths It states that God created the world freely out of nothing from no pre existent matter space or time This teaching is central to classical accounts of divine action free will grace theodicy religious language intercessory prayer and questions of divine temporality and as such the foundation of a scriptural God but also the transcendent Creator of all that is This edited collection explores how we might now recover a place for this doctrine and with it a consistent defence of the God of Abraham in philosophical scientific and theological terms The contributions span the religious traditions of Judaism Christianity and Islam and cover a wide range of sources including historical philosophical scientific and theological As such the book develops these perspectives to reveal the relevance of this idea within the modern world      **The Art of Abduction**

Igor Douven, 2022-05-03 A novel defense of abduction one of the main forms of nondeductive reasoning With this book Igor Douven offers the first comprehensive defense of abduction a form of nondeductive reasoning Abductive reasoning which is guided by explanatory considerations has been under normative pressure since the advent of Bayesian approaches to rationality Douven argues that although it deviates from Bayesian tenets abduction is nonetheless rational Drawing on scientific results in particular those from reasoning research and using computer simulations Douven addresses the main critiques of abduction He shows that versions of abduction can perform better than the currently popular Bayesian approaches and can even do the sort of heavy lifting that philosophers have hoped it would do Douven examines abduction in detail comparing it to other modes of inference explaining its historical roots discussing various definitions of abduction given in the philosophical literature and addressing the problem of underdetermination He looks at reasoning research that

investigates how judgments of explanation quality affect people's beliefs and especially their changes of belief. He considers the two main objections to abduction: the dynamic Dutch book argument and the inaccuracy minimization argument, and then gives abduction a positive grounding using agent-based models to show the superiority of abduction in some contexts. Finally, he puts abduction to work in a well-known underdetermination argument, the argument for skepticism regarding the external world.

***Dead Reckoning*** Ph.D. Nordby, 1999-12-20 Her Brentwood home became a hotbed for homicide. But in the wake of intense public and media attention, one salient and hard truth was often overlooked: the murder of Nicole Brown Simpson, while brutal and heinous in its form, was just one of thousands of homicides committed during that same year. Most escaped the scrutiny of public interest. Many never made it to trial, and still others were dismissed as natural deaths, perfect crimes that remain forever unsolved. How then do investigators solve a murder when the trail goes cold? Like mariners navigating without landmarks under a starless night sky, lacking a reliable witness or smoking gun, they plot their course through the clues by applying their own style of *Dead Reckoning*: reconstructing the crime by disciplined observation, careful reasoning, and experience. *Dead Reckoning: The Art of Forensic Detection* examines the applications of logic and science to decipher chaotic death scenes and difficult cases and to derive orderly explanations from their jumbled clues. The 10 case studies in this book illustrate the powers of observation exercised in reading the signs, identifying them as clues, and reasoning from them to the best explanation. For investigators as well as forensic pathologists, coroners, prosecutors, and defense attorneys, *Dead Reckoning: The Art of Forensic Detection* stresses the importance of trusting your own observations, even in the wake of contradictory evidence.

***Science and the Study of God*** Alan G. Padgett, 2003 For many today, religion and science are seen as enemies battling for human hearts and minds. In this new book, Alan Padgett shows that they can and should work together in developing a worldview that is at once spiritually meaningful and scientifically sound. Pursuing a perspective that he calls the mutuality model, Padgett highlights the contributions that both religion and science make to a full understanding of the world and our place in it. He argues convincingly that the natural sciences and theology can rationally influence each other without giving up their important distinctives and methods. The book explores the nature of informal reason and worldviews, the character of theology as a spiritual and academic discipline, and the question of what counts as natural science. Along the way, Padgett discusses such topics as thermodynamics, time, resurrection, and the historical Jesus as examples of the powerful model that he is developing.

***The SAGE Handbook of the Philosophy of Social Sciences*** Ian C. Jarvie, Jesus Zamora-Bonilla, 2011-03-14 In this exciting Handbook, Ian Jarvie and Jesus Zamora Bonilla have put together a wide-ranging and authoritative overview of the main philosophical currents and traditions at work in the social sciences today. Starting with the history of social scientific thought, this Handbook sets out to explore the core fundamentals of social science practice, from issues of ontology and epistemology to issues of practical method. Along the way, it investigates such notions as paradigm, empiricism, postmodernism, naturalism, language, agency, power, culture, and causality.

**The Nature of Christian Doctrine** Alister E. McGrath, 2024-01-02 A groundbreaking account of the origins development and enduring significance of Christian doctrine explaining why it remains essential to the life of Christian communities Noting important parallels between the development of scientific theories and Christian doctrine Alister E McGrath examines the growing view of early Christianity as a theological laboratory We can think of doctrinal formulations as proposals submitted for testing across the Christian world rather than as static accounts of orthodoxy This approach fits the available evidence much better than theories of suppressed early orthodoxies and reinforces the importance of debate within the churches as a vital means of testing doctrinal formulations McGrath offers a robust critique of George Lindbeck's still influential *Nature of Doctrine* 1984 raising significant concerns about its reductionist approach He instead provides a more reliable account of the myriad functions of doctrine utilising Mary Midgley's concept of mapping as a means of coordinating the multiple aspects of complex phenomena McGrath's approach also employs Karl Popper's Three Worlds allowing the theoretical objective and subjective aspects of doctrine to be seen as essential and interconnected We see how Christian doctrine offers ontological disclosure about the nature of reality while at the same time providing a coordinating framework which ensures that its various aspects are seen as parts of a greater whole Doctrine provides a framework or standpoint that allows theological reality to be seen and experienced in a new manner it safeguards and articulates the core vision of reality that is essential for the proper functioning and future flourishing of Christian communities
