The Intellectual Appropriation Of Technology Discourses On Modernity 1900 1939:

The Intellectual Appropriation of Technology Mikael Hard, Andrew Jamison, 1998-10-27 This book examines the broad range of social and intellectual responses to technology in the first four decades of this century and suggests that these responses set the terms that continue to govern contemporary debates Starting around 1900 technology became a lively subject for debate among intellectuals writers and other opinion leaders The expansion of the machine into ever more areas of social and economic life had led to a need to interpret its meanings in a more comprehensive way than in the past World War I and its aftermath shifted the terms of this ongoing debate by underlining both the potential dangers of technology and its centrality to modern life This book examines the broad range of social and intellectual responses to technology in the first four decades of this century and suggests that these responses set the terms that continue to govern contemporary debates Focusing on the broader contexts within which intellectual positions are formed the book highlights the ways in which attitudes toward technology were shaped in a wide variety of national and organizational settings A common theme is that in debating technology people drew on their distinctive national symbols and cultural traditions By emphasizing the interplay between debates on technology and the making of modernity the book challenges standard historical accounts of the early twentieth century Contributors Ketil G Andersen Aant Elzinga Tor Halvorsen Mikael H rd Kjetil Jakobsen Andrew Jamison Catharina Landstr m Conny Mithander Sissel Myklebust Dick van Lente Peter Wagner **Modernity and Technology** Thomas J. Misa, Philip Brey, Andrew Feenberg, 2003 The book is divided into three parts **Weak Knowledge** Moritz Epple, Annette Imhausen, Falk Müller, 2019-12-18 Im Gegensatz zu landl ufigen Vorstellungen sind wissenschaftliche Wissensbest nde h ufig prek re Ressourcen Sie k nnen in bestimmten Situationen aus epistemischen Gr nden schwach sein weil Begr ndungen oder empirische Evidenz problematisch sind In anderen Situationen fehlt die kulturelle und soziale Anerkennung oder das fragliche Wissen bleibt schwach weil es nicht gelingt es praktisch nutzbar zu machen Der Band versammelt Beitr ge aus allen historischen Epochen und aus einem breiten Spektrum von Wissensgebieten von der Medizin bis zur Klimatologie Alva and Gunnar Myrdal Thomas Etzemüller, 2014-07-29 As two of the leading social scientists of the twentieth century Alva and Gunnar Myrdal tried to establish a harmonious organic Gemeinschaft community in order to fight an assumed disintegration of modern society By means of functionalist architecture and by educating sensible citizens disciplining bodies and reorganizing social relationships they attempted to intervene in the lives of ordinary men The paradox of this task was to modernize society in order to defend it against an ambivalent modernity This combination of Weltanschauung world view social science and technical devices became known as social engineering The Myrdals started in the early 1930s with Sweden and then chose the world as their working field In 1938 Gunnar Myrdal was asked to solve the negro problem in the United States and in the 1970s Alva Myrdal campaigned for the world s super powers to abolish all of their nuclear weapons The Myrdals successfully established their own modern American marriage as a media image and role

model for reform Far from perfect their marriage was disrupted by numerous conflicts mirrored in thousands of private letters This marital conflict propelled their urge for social reform by exposing the need for the elimination of irrational conflicts from everyday life A just society according to the Myrdals would merge social expertise with everyday life and ordinary men with the intellectually elite Thomas Etzem ller s study of these two figures brings to light the roots of modern social engineering providing insight for today s sociologists historians and political scholars

ICTs and Development in India T. T. Sreekumar,2011 ICTs and Development in India is a unique attempt to study the nature and consequences of the growing presence of Information Technology in development projects in India focusing particularly on E governance and Information Communication Technologies ICT development programs initiated by Civil Society Organizations CSOs Sreekumar persuasively argues that there is in fact a wide chasm between the expectations and the actual benefits of CSO initiatives in rural India and that recognising this crucial fact yields important lessons in conceptualizing development and social action in rural areas

Leonardo to the Internet Thomas J. Misa,2004 Beginning his narrative at the dawn of the modern era he surveys the intersections of technology politics and culture in the Renaissance court system of Western Europe the role of technology in Holland s commercial expansion the diverse paths to and through Britain s industrial revolution the links among technology imperialism and trade in the nineteenth century and the application of scientific discoveries in chemistry and physics to industry in Germany and the United States at the turn of the twentieth century He then examines the introduction of mass produced consumer goods and their impact on daily life and modernist sensibilities the rise of the military industrial complex during World War II and the technological innovations generated by the command and control economies of the Cold War and the emergence of a technology oriented global culture since the 1970s

Valuing Animals Susan D. Jones,2003-04-30 Over the course of the twentieth century the relationship between Americans and their domestic animals has changed dramatically In the 1890s pets were a luxury horses were the primary mode of transport and nearly half of all Americans lived or worked on farms Today the pet industry is a multibillion dollar a year business keeping horses has become an expensive hobby and consumers buy milk and meat in pristine supermarkets Veterinarians have been very much a part of these changes in human animal relationships Indeed the development of their profession from horse doctor to medical scientist provides an important perspective on these significant transformations in America s social cultural and economic history In *Valuing Animals* Susan D Jones trained as both veterinarian and historian traces the rise of veterinary medicine and its impact on the often conflicting ways in which Americans have assessed the utility and worth of domesticated creatures She first looks at how the eclipse of the horse by motorized vehicles in the early years of the century created a crisis for veterinary education practice and research In response veterinarians intensified their activities in making the livestock industry more sanitary and profitable Beginning in the 1930s veterinarians turned to the burgeoning number of house pets whose sentimental value to their owners translated into new market opportunities Jones

describes how vets overcame their initial doubts about the significance of this market and began devising new treatments and establishing appropriate standards of care helping to create modern pet culture Americans today value domestic animals for reasons that typically combine exploitation and companionship Both controversial and compelling *Valuing Animals* uncovers the extent to which veterinary medicine has shaped and been shaped by this contradictory attitude

The Humanities and the Modern Politics of Knowledge Anders Ekström, Hampus Östh Gustafsson, 2025-10-01 This book addresses the shifting status of the humanities through a national case study spanning two centuries The societal function of the humanities is considered from the flexible perspective of knowledge politics in order to historicize notions of impact and intellectual organization that tend to be taken for granted The focus on modern Sweden enables an extended but still empirically coherent historical analysis inviting critical comparisons with the growing literature on the history of the humanities from around the world In the Swedish case the humanities were instrumental to the construction of modern societal institutions political movements and professional education in the second half of the 19th century while in the 20th century the sense of future making shifted towards science and medicine and later technology and economy The very rationale of the humanities was thus put under pressure as their social contract required novel negotiations Their state and connections to society were nevertheless of a complex and ambiguous character as is demonstrated by this volume whose contributions explore the many faces and places of the modern humanities

Politics of Things Michelle Christensen, Florian Conradi, 2020-02-24 In a state of ontological crisis all boundaries have been ruptured between nature and culture human and machine and object and subject We find ourselves exhaustively tackling the turmoil of our own designed circumstances as we emerge to become extensions of the extensions that we built In this practice based design theory project the authors share their experiments in negotiating power with things hacking mundane objects and thus their own everyday lives allowing themselves to be swayed and misled disrupted and called into question The experiments delineate a mode of critical cultural inquiry where design and sociology collide to elicit critical perspectives on the designer and the designed as we act within an entangled politics of things

Egypt's Beer Omar D. Foda, 2019-12-15 Although alcohol is generally forbidden in Muslim countries beer has been an important part of Egyptian identity for much of the last century Egypt's Stella beer which only coincidentally shares a name with the Belgian beer Stella Artois became a particularly meaningful symbol of the changes that occurred in Egypt after British Occupation Weaving cultural studies with business history Egypt's Beer traces Egyptian history from 1880 to 2003 through the study of social economic and technological changes that surrounded the production and consumption of Stella beer in Egypt providing an unparalleled case study of economic success during an era of seismic transformation Delving into archival troves including the papers of his grandfather who for twenty years was CEO of the company that produced Stella Omar D Foda explains how Stella Beer achieved a powerful presence in all popular forms of art and media including Arabic novels songs films and journalism As the company's success was built on a mix of innovation

efficient use of local resources executive excellence and shifting cultural dynamics this is the story of the rise of a distinctly Egyptian modernity seen through the lens of a distinctly Egyptian brand The Ideal of Total Environmental Control Suzanne Strum,2017-10-19 Finalist for the Thought and Criticism category of the FAD Awards 2019 This book traces the ideal of total environmental control through the intellectual and geographic journey of Knud L nberg Holm a forgotten Danish architect who promoted a unique systemic cybernetic and ecological vision of architecture in the 1930s A pioneering figure of the new objectivity and international constructivism in Germany in 1922 and a celebrated peer of radical figures in De Stijl the Bauhaus and Russian constructivism when he emigrated to Detroit in 1923 he introduced the vanguard theory of productivism through his photography essays designs and pedagogy By following L nberg Holm s ongoing matrix of relations until the postwar era with the European vanguards in CIAM and former members of the Structural Study Associates SSA especially Fuller Frederick Kiesler and C Theodore Larson this study shows how their definition of building as a form of environmental control anticipated the contemporary disciplines of industrial ecology industrial metabolism and energy accounting *Techno-Fixers* Sean F. Johnston,2020-03-26 This is the story of a seductive idea Over the past century the potential of new technology to solve social dilemmas has captivated modern culture From apps that encourage physical activity to airport scanners meant to prevent terrorism the concept that clever innovation can improve society is irresistible but faith in such technological fixes is seldom questioned Where did this idea come from what makes it so appealing and how does it endanger our future Techno Fixers traces the source of modern confidence in technology to engineering hubris radical utopian movements science fiction fanzines policy makers soundbites corporate marketing and optimistic consumer culture from the turn of the twentieth century until today Sean Johnston demonstrates that through the promotion of prominent government scientists technocrats entrepreneurs and popular media modern invention became the favourite tool for addressing human problems and society s ills Nonetheless when it comes to assessing the success of cigarette filters as the solution to safe smoking or DDT as the answer for agricultural productivity the evidence is sobering Cautioning that the rhetoric of technological fixes seldom matches reality Johnston examines how employing innovation to bypass traditional methods can foster as many problems as it solves A critical examination of modern faith in technology Techno Fixers evaluates past mistakes present implications and future opportunities for innovating societies **Ethics, Politics, and Whistleblowing in Engineering** Nicholas Sakellariou,Rania Milleron,2018-11-09 The aim of this book is to generate a strong operational ethic in the work of engineers from all disciplines It provides numerous examples of engineers who sought to meet the highest ethical standards risking both professional and personal retaliations In short it presents the fields of engineering ethics in the context of actual conflict situations on the job and points to an urgent need for a strong ethical framework for the profession This book is about engineering students and practitioners truly understanding valuing and championing their wider critical role Ralph Nader the consumer advocate and champion of engineers wrote the preface

Presents various viewpoints which hail from a wide variety of disciplines in the engineering science and technology communities Includes a mix of historical and contemporary examples a list of relevant television series and documentaries for engineers as well as links to informative websites for practicing engineers and engineering students Examines engineering professionalism as related to the imperative of sustainable development Provides numerous examples of corporate whistleblowing and ethical dilemmas in engineering Includes a foreword written by consumer advocate Ralph Nader

Prophets of Computing Dick van Lente, 2022-12-14 When electronic digital computers first appeared after World War II they appeared as a revolutionary force Business management the world of work administrative life the nation state and soon enough everyday life were expected to change dramatically with these machines use Ever since diverse prophecies of computing have continually emerged through to the present day As computing spread beyond the US and UK such prophecies emerged from strikingly different economic political and cultural conditions This volume explores how these expectations differed assesses unexpected commonalities and suggests ways to understand the divergences and convergences This book examines thirteen countries based on source material in ten different languages the effort of an international team of scholars In addition to analyses of debates political changes and popular speculations we also show a wide range of pictorial representations of the future with computers

The Invention of Technological Innovation Benoît Godin, 2019 p p1 margin 0 ppx 0 ppx 0 ppx 0 ppx font 10 ppx Arial This timely book provides an intellectual and conceptual history of a key representation of innovation technological innovation Tracing the history of the discourses of scholars practitioners and policy makers and exploring how and why innovation became defined as technological Benoît Godin studies the emergence of the term its meaning and its transformation and use over time

A Hybrid Imagination Andrew Jamison, Steen Hyldgaard Christensen, Lars Botin, 2022-05-31 This book presents a cultural perspective on scientific and technological development As opposed to the story lines of economic innovation and social construction that tend to dominate both the popular and scholarly literature on science technology and society or STS the authors offer an alternative approach devoting special attention to the role played by social and cultural movements in the making of science and technology They show how social and cultural movements from the Renaissance of the late 15th century to the environmental and global justice movements of our time have provided contexts or sites for mixing scientific knowledge and technical skills from different fields and social domains into new combinations thus fostering what the authors term a hybrid imagination Such a hybrid imagination is especially important today as a way to counter the competitive and commercial hubris that is so much taken for granted in contemporary science and engineering discourses and practices with a sense of cooperation and social responsibility The book portrays the history of science and technology as an underlying tension between hubris literally the ambition to play god on the part of many a scientist and engineer and neglect the consequences and a hybrid imagination connecting scientific facts and technological artifacts with cultural understanding The book concludes with

chapters on the recent transformations in the modes of scientific and technological production since the Second World War and the contending approaches to greening science and technology in relation to the global quest for sustainable development The book is based on a series of lectures that were given by Andrew Jamison at the Technical University of Denmark in 2010 and draws on the authors many years of experience in teaching non technical or contextual knowledge to science and engineering students The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED supported by the Danish Strategic Research Council from 2010 to 2013 Table of Contents Introduction Perceptions of Science and Technology Where Did Science and Technology Come From Science Technology and Industrialization Science Technology and Modernization Science Technology and Globalization The Greening of Science and Technology Nazi Germany and Southern Europe, 1933-45 Fernando Clara, Cláudia Ninhos, Sasha Grishin, 2016-04-29 Nazi Germany and Southern Europe 1933 45 is about transnational fascist discourse It addresses the cultural and scientific links between Nazi Germany and Southern Europe focusing on a hybrid international environment and an intricate set of objects that include individual social cultural or scientific networks and events

Broadcasting Fidelity Myles W. Jackson, 2024-09-17 A landmark history of early radio in Germany and the quest for broadcast fidelity When we turn on a radio or stream a playlist we can usually recognize the instrument we hear whether it is a cello a guitar or an operatic voice Such fidelity was not always true of radio Broadcasting Fidelity shows how the problem of broadcast fidelity pushed German scientists beyond the traditional bounds of their disciplines and led to the creation of one of the most important electronic instruments of the twentieth century In the early days of radio acoustical distortions made it hard for even the most discerning musical ears to differentiate instruments and voices The physicists and engineers of interwar Germany with the assistance of leading composers and musicians tackled this daunting technical challenge Research led to the invention in 1930 of the traultonium an early electronic instrument capable of imitating the timbres of numerous acoustical instruments and generating novel sounds for many musical genres Myles Jackson charts the broader political and artistic trajectories of this instrument tracing how it was embraced by the Nazis and subsequently used to subvert Nazi aesthetics after the war and describing how Alfred Hitchcock commissioned a later version of the traultonium to provide the sounds of birds squawking and flapping their wings in his 1963 thriller The Birds A splendid work of scholarship by an acclaimed historian of science Broadcasting Fidelity reveals how the interplay of science technology politics and culture gave rise to new aesthetic concepts innovative musical genres and the modern discipline of electroacoustics

Fatherlands Abigail Green, 2001-09-06 An exploration of the nature of identity in nineteenth century Germany **The Making of Green Engineers** Andrew Jamison, 2022-06-01 This book discusses the ways in which engineering educators are responding to the challenges that confront their profession On the one hand there is an overarching sustainability challenge the need for engineers to relate to the problems brought to light in the debates about environmental protection resource

depletion and climate change There are also a range of societal challenges that are due to the permeation of science and technology into ever more areas of our societies and everyday lives and finally there are the intrinsic scientific and technological challenges stemming from the emergence of new fields of technosciences that mix science and technology in new combinations In the book the author discusses and exemplifies three contending response strategies on the part of engineers and engineering educators a commercial strategy that links scientists and engineers into networks or systems of innovation an academic strategy that reasserts the traditional values of science and engineering and an integrative strategy that aims to combine scientific knowledge and engineering skills with cultural understanding and social responsibility by fostering what the author terms a hybrid imagination Professor Jamison combines scholarly analysis with personal reflections drawing on over forty years of experience as a humanist teaching science and engineering students about the broader social political and cultural contexts of their fields The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED funded by the Danish Strategic Research Council for which Professor Jamison has served as coordinator
