Resources in Education ,1975   *30-Second Coding* Mark Steadman,2021-12-14 The successful 30 Second series tackles coding the science of programming the technology which operates in almost every aspect of modern life Computer code operates behind nearly everything we do from small calculations in the home to complex executions that drive the global economy It influences who we see follow and like online and describes the websites we visit the connections between them the sounds heard on Spotify and videos watched on YouTube There is very little we do which hasn t in some way been codified analysed and computed electronically yet few of us possess a basic understanding of that ultimate language barrier That s a shame because coding is the key to so much Simple programming concepts can explain plenty about the modern world and the changes to come in the age of AI With insightful text edited by computer scientist and technology podcaster Mark Steadman and contributions from other industry experts learn the origins of computer code from the first computers developed in during the Industrial Revolution through the codebreaking machines used during World War II to the hyperfast computers of the present day Have all the key terms of this fascinating science explained in simple bitesize chunks of information rich text as well as meeting the key figures who have helped make computer science what it is today From algorithms and scripts to block chain bits and bots turn to 30 Second Coding to reveal the secrets behind this fascinating subject   Symbolic Simulation Methods for Industrial Formal Verification Robert B. Jones,2012-12-06 Symbolic Simulation Methods for Industrial Formal Verification contains two distinct but related approaches to the verification problem Both are based on symbolic simulation The first approach is applied at the gate level and has been successful in verifying sub circuits of industrial microprocessors with tens and even hundreds of thousands of gates The second approach is applied at a high level of abstraction and is used for high level descriptions of designs The book contains three main topics Self consistency a technique for deriving a formal specification of design behavior from the design itself The use of the parametric representation to encode predicates as functional vectors for symbolic simulation an important step in addressing the state explosion problem Incremental flushing a method used to verify high level descriptions of out of order execution Symbolic Simulation Methods for Industrial Formal Verification concludes with work on verification of simplified models of out of order processors   Programming Principles with COBOL I Don B.
