Neuroglia Molecular Mechanisms in Psychiatric Disorders Caterina Scuderi,Mami Noda,Alexei Verkhratsky,2019-01-21 Neuropsychiatric disorders have long been considered as specific dysfunctions of neuronal functions Studies of the recent decade however have challenged this simplistic view highlighting the important role played by neuroglial cells in the onset and or progression of neuropsychiatric diseases In the central nervous system CNS non excitable neuroglia are represented by cells of ectodermal origin astrocytes mainly responsible for CNS homeostasis and oligodendrocytes that provide myelination and support for axons and mesodermal origin microglial cells that are scions of foetal macrophages entering the neural tube early in development these cells provide for CNS defence and contribute to shaping neuronal networks Pathological changes of neuroglia are complex these changes are classified into reactive gliosis astrogliosis activation of microglia and hypertrophy of oligodendroglial precursors gliodegeneration with loss of function and glial pathological remodelling Combination of these processes defines the evolution of neurological diseases in general and neuropsychiatric disorders in particular In this research topic we addressed the contribution of neuroglia to major neuropsychiatric pathologies including major depression schizophrenia and addictive disorders

Molecular Regulation of Arousal States Ralph Lydic,2019-04-30 Arousal states are processes that include waking deep sleep and the dreaming phase of sleep REM Molecular Regulation of Arousal States explores the cellular and molecular mechanisms by which sleep and wakefulness are regulated and seeks explanations for the generation of arousal states It presents step by step research protocols that allow investigators to apply the techniques described to a wide range of physiological and behavioral research problems such as sleep neurobiology and state dependent disruption of cardiopulmonary control For the first time a single source integrates cellular and molecular research techniques with studies of arousal opening the door to exciting new research methodologies
