Abstract. Process management is a method for improving Boeing's business processes, however many aspects have been difficult to implement. *eQuality* is a software system based on a framework called DDUCKS that is being designed to support the process management life cycle. We take a knowledge acquisition approach to the development of the tool, emphasizing the importance of mediating and intermediate knowledge representations. Sharing and reuse of tools, models, and representations is facilitated through a layered architecture. *eQuality's* process documentation capability includes a number of views, that can be used either in *sketchpad* or *model* mode. Using the views, an integrated business enterprise model may be developed. Analysis and simulation tools supporting process improvement are implemented with attribute, function, and task editors that make use of a user scripting language and extensible function library. A virtual *project notebook* is used to organize project information and help facilitate group meetings.

1 Process Management at The Boeing Company

The Boeing Company is undergoing fundamental changes in the way it manages its business processes. There are many catalysts for these changes, springing from both internal and external sources — for example, the Boeing Process and System Strategy, the need for concurrent product definition on the new 777 plane, cost management initiatives, CALS, and customer demand for low cost and high quality. Boeing CEO Frank Shrontz [72] has made continuous quality improvement the company's number one objective, affirming that it constitutes "the cornerstone of our business strategy to be the world's leading aerospace company."

In 1988, the company undertook a study of traditional aviation design and manufacturing processes. As a result of the study, the Corporate Computing Board developed a new process requiring *concurrent* design, build, and support activities. While concurrent design, build, and support efforts require significant advances in technology (e.g., 100% 3D CAD digital product definition and preassembly), an equally important challenge is to make the necessary cultural and organizational changes. In the past, processes and organizations remained unchanged when automated support tools were developed. However, new computing applications could do little of themselves to reduce problems of error and rework. Now we are required to document and streamline business, engineering, and
