High Pressure Materials Properties: Magnetic Properties of Oxides Under Pressure

Yoshiyuki Kawazoe, Takeshi Kanomata, Ryunosuke Note, 2023-08-14 The subject of this supplement to Landolt B rnstein IV 22 Series is to present both the numerical and graphical data on the various magnetic properties of materials under pressure Data for transition metal binary oxides MmOn M transition metals O oxygen m n 1 15 MXO M transition metals X F Cl Br O oxygen and MM On M transition metals M transition metals or non transition metal elements O oxygen n 2 2 5 3 ternary oxides are presented As well known the data compiling principle in the Landolt B rrnstein series is to choose the best reliable values from many available experimental data The present compilation is done according to this principle Compounds and Alloys Under High Pressure E.Yu Tonkov, 2022 This is the first book to classify and systematize the available data on the behavior of binary alloys under high pressure Despite the fact that there is a strong correlation between temperature composition T C phase diagrams at normal pressure and three dimensional temperature composition pressure T C P diagrams many material scientists seldom refer to the T C P diagrams just as many high pressure researchers often ignore the data obtained at normal pressure This book aims to bridge the gap between data obtained at high pressure and that obtained at normal pressure The most recent research covers not only elements and stoichiometric compounds but also binary ternary and multicomponent alloys and so this book covers an extended range of substances The properties of 890 binary systems and a further 1153 pseudobinary and ternary systems are summarized and accompanied by an extensive bibliography The data includes information on the solubility of components in solid solutions melting and first and second order phase transformations in alloys and stoichiometric compounds **Science and Technology of High Pressure** Murli H. Manghnani, W. J. Nellis, Malcolm F. Nicol, 2000 These books presents a wide spectrum of research and development activities in the field of High Pressure Science and Technology These book provide comprehensive and interdisciplinary descriptions of recent research accomplishments in the biological chemical Earth materials physical physiological and related sciences Hydrogen Materials Science and Chemistry of Metal Hydrides Michael D. Hampton, Dmitry V. Schur, Svetlana Yu. Zaginichenko, V.I. Trefilov, 2012-12-06 In September 1999 with the generous support of NATO scientists from 18 different nations gathered in Katsiveli Yalta Ukraine at the NATO Advanced Research Workshop on Hydrogen Materials Science and Chemistry of Metal Hydrides to present their research and to discuss world energy problems and possible solutions interactions of hydrogen with materials the role of hydrogen in materials science and the chemistry of metal hydrides High level and highly professional presentations were accompanied by a great deal of discussion and debate of the issues from both fundamental and global perspectives The result was a large number of new collaborations new directions and better understanding of energy and materials issues The research presented at this meeting can be found in

this volume These papers range from global perspectives such as the new vision of energy and how hydrogen fits into that future to reviews such as a look at nickel hydride over the last 40 years to very specific current research A large number of papers are included on hydrogen and materials These papers include articles on properties such as superconductivity diffusion EMF magnetic properties physico chemical properties phase composition and permeability as a result of the interaction with or incorporation of hydrogen Also included are papers discussing the use of hydrogen as a processing or alloying agent The use of hydrogen in the synthesis of battery electrode materials composite materials and alloys is also presented

High-Temperature and High Pressure Crystal Chemistry Robert M. Hazen, Robert T. Downs, 2018-12-17

Volume 41 of *Reviews in Mineralogy and Geochemistry* introduces to the field of high temperature and high pressure crystal chemistry both as a guide to the dramatically improved techniques and as a summary of the voluminous crystal chemical literature on minerals at high temperature and pressure The three parts of the book introduces crystal chemical considerations of special relevance to non ambient crystallographic studies reviews the temperature and pressure variation of structures in major mineral groups and presents experimental techniques for high temperature and high pressure studies of single crystals and polycrystalline samples as well as special considerations relating to diffractometry on samples at non ambient conditions

Shock Waves in Condensed Matter Y. M. Gupta, 2012-12-06 The Fourth American Physical Society Topical Conference on Shock Waves in Condensed Matter was held in Spokane Washington July 22 25 1985 Two hundred and fifty scientists and engineers representing thirteen countries registered at the conference The countries represented included the United States of America Australia Canada The People s Republic of China France India Israel Japan Republic of China Taiwan United Kingdom U S S R Switzerland and West Germany One hundred and sixty two technical papers covering recent developments in shock wave and high pressure physics were presented All of the abstracts have been published in the September 1985 issue of the *Bulletin of the American Physical Society* The topical conferences held every two years since 1979 have become the principal forum for shock wave studies in condensed materials Both formal and informal technical discussions regarding recent developments conveyed a sense of excitement Consistent with the past conferences the purpose of this conference was to bring together scientists and engineers studying the response of condensed matter to dynamic high pressures and temperatures Papers covering experimental theoretical and numerical studies of condensed matter properties were presented A noteworthy feature of this conference was the participation by several leading scientists engaged in static high pressure research Donald Curran served as the Master of Ceremonies at the conference banquet which was attended by two hundred and seventy five conference participants and guests including Dr Samuel Smith the new President of Washington State University

Dr *Physics Briefs*, 1993 *Theoretical Studies of Electronic, Vibrational, and Structural Properties of Solids Under Pressure* Steven Paul Lewis, 1993 This dissertation describes first principles quantum mechanical investigations of several realistic solid state systems The main goal of this research has been to understand and

predict the electronic vibrational and structural properties of materials under pressure Microscopic information on these properties is obtained within local density functional theory using ab initio pseudopotentials This work focuses on three categories of materials 1 Part I deals with the high pressure behavior of elemental systems from group IV of the Periodic Table The pressure dependences of Raman active phonon modes of high pressure metallic phases of silicon germanium and tin are studied within the frozen phonon approximation In addition the structural properties of a recently discovered orthorhombic phase of silicon are calculated The aim of these two investigations is to understand and explain recent experimental results A third investigation predicts the existence of an orthorhombic high pressure phase of germanium 2 Part II focuses on group V of the Periodic Table The electronic and vibrational properties of elemental arsenic are studied with the aim of understanding the measured pressure dependences of the superconducting transition temperature and the normal state resistance In addition several candidate atomic phases of solid nitrogen are studied to determine their structural stability and electronic properties 3 Finally Part III considers the effect of varying the stoichiometry in compound systems In particular model calculations are performed to explore the Ga As system with the goal of motivating experimental studies The electronic properties of several model Ga As systems with varying stoichiometry are studied *Review*, 1985
