Shahane, 1977     **The Graphical Solution of Hydraulic Problems** Freeman Clarke Coffin, 1897     Problems in Hydraulics and Fluid Mechanics Sandro Longo, Maria Giovanna Tanda, Luca Chiapponi, 2020-09-30 This textbook offers a unique introduction to hydraulics and fluid mechanics through more than 100 exercises with guided solutions which students will find valuable in preparation for their preliminary or qualifying exams and for testing their grasp of the subject. In some exercises two different solution methods are proposed to highlight the fact that the level of complexity of the calculations is often linked to the choice of method, though in most cases only the simplest method is presented. The exercises are organized by subject, covering forces on planes and curved surfaces, floating bodies, exercises that require the application of linear and angular momentum, balancing in inertial and non-inertial references, pipeline systems with particular applications to industrial plants, hydraulic systems with machines, pumps and turbines, transient phenomena in pipelines, and uniform and gradually varied flows in open channels. The book also features appendices that contain selected data and formulas of practical interest. Instructors of courses that address one or all of the above topics will find the exercises of great help in preparing their courses, while researchers will find the book useful as an accessible summary of the topics covered.
