Mather, Magaly Koch, 2022-04-11 Computer Processing of Remotely Sensed Images A thorough introduction to computer processing of remotely sensed images processing methods and applications Remote sensing is a crucial form of measurement that allows for the gauging of an object or space without direct physical contact allowing for the assessment and recording of a target under conditions which would normally render access difficult or impossible This is done through the analysis and interpretation of electromagnetic radiation EMR that is reflected or emitted by an object surveyed and recorded by an observer or instrument that is not in contact with the target This methodology is particularly of importance in Earth observation by remote sensing wherein airborne or satellite borne instruments of EMR provide data on the planet's land seas ice and atmosphere This permits scientists to establish relationships between the measurements and the nature and distribution of phenomena on the Earth's surface or within the atmosphere Still relying on a visual and conceptual approach to the material the fifth edition of this successful textbook provides students with methods of computer processing of remotely sensed data and introduces them to environmental applications which make use of remotely sensed images The new edition's content has been rearranged to be more clearly focused on image processing methods and applications in remote sensing with new examples including material on the Copernicus missions microsatellites and recently launched SAR satellites as well as time series analysis methods The fifth edition of Computer Processing of Remotely Sensed Images also contains A cohesive presentation of the fundamental components of Earth observation remote sensing that is easy to understand and highly digestible Largely non technical language providing insights into more advanced topics that may be too difficult for a non mathematician to understand Illustrations and example boxes throughout the book to illustrate concepts as well as revised examples that reflect the latest information References and links to the most up to date online and open access sources used by students Computer Processing of Remotely Sensed Images is a highly insightful textbook for advanced undergraduates and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments

**Bakersfield** J. Michael Stork, 2024-11-02 Bakersfield By J M Stork In Bakersfield a darkly surreal novel of self discovery and reckoning Michael embarks on a cross country road trip that will force him to confront the depths of his own fractured soul Lost and spiraling after another failed job Michael is haunted by addiction regret and a sense of purposelessness he can no longer outrun But the open road has plans for him When he encounters Sa an enigmatic woman who seems to know more about him than he knows about himself Michael is drawn into a supernatural landscape where the boundaries between reality and illusion blur Sa reveals that she is from a dimension called the Fade a place where human spirit energy fuels her world and where a machine known as Archangel has destabilized the delicate boundaries between dimensions plunging both worlds into a slow decay As Michael journeys deeper into the heart of the Fade he's pulled into a hallucinatory dreamscape where a second voice Ezekiel stirs within him a force of destruction of cold logic urging him to abandon his futile hopes and accept the darkness within Michael's struggle to reconcile his need for

redemption with Ezekiel's thirst for chaos leads him to the ultimate question: can he become both savior and destroyer? Equal parts psychological thriller and metaphysical journey, *Bakersfield* explores the duality within us all: the light and dark, creation and destruction, as Michael confronts the ghosts of his past and the frightening possibility that true transformation may require him to lose himself completely. Anchored by haunting prose and a relentless drive toward self-exploration, *Bakersfield* is a profound meditation on addiction, redemption, and the terrifying beauty of embracing our most hidden selves. For readers of Haruki Murakami, Neil Gaiman, and fans of dystopian/existential fiction, *Bakersfield* is a gripping and unforgettable odyssey into the unknown.
