Baumol, Dietrich Fischer, 1986 With his characteristic acuteness and lucidity William Baumol one of America's foremost economists tackles the problem of equity considerations in welfare economics by applying the novel superfairness criterion to the distribution of resources product income and wealth that arises from economic decisions

**with Applications to Distributive Problems and Equilibrium Models** Antonio Villar, 2012-12-06 Presentation Many economic problems as equilibrium models input output analysis rational behaviour etc are usually modelled in terms of operators in Euclidean spaces This monograph deals with the analysis of a number of formal problems involving this kind of operators with particular reference to complementarity problems and variational inequalities and their applications to distributive problems and equilibrium models Thus the purpose of this work is to provide a set of new results on the solvability of those problems and a number of economic applications that will illustrate the interest of these results in economics It is worth stressing from the very beginning that our analysis concentrates on the existence and in some cases optimality of solutions That is what is meant here by solvability in particular nothing will be said with respect to the uniqueness stability sensitivity analysis or computation of solutions The results on the solvability of operator problems presented here were actually arrived at as a way of solving specific economic models Yet we are going to relate this case by somehow reversing the way it happened that is starting with the formal results and then presenting a number of economic models which appear as applications of VIII these formal results The rationale for this approach is twofold First it provides a neat track via which to go through the whole work Then because I would like to emphasize the interest of complementarity and variational inequalities problems in economic modelling **Market Drive and Governance** Ralf Boscheck, 2001-12-13 Corporate moves towards focused production and outsourcing governmental reforms involving privatization and deregulation

and the globalization of trade and investments promise large efficiency gains. However, the necessary coordination mechanisms call for regulatory approval and policy guidelines to safeguard these undertakings against abuse which in turn are held up against the test of administrative efficiency and global regulatory competition. The question is what standard will ultimately inspire policy, satisfy administration and be acceptable to parties inside and outside of a given commercial and economic arrangement. Ralf Boscheck looks to the various approaches of institutional and constitutional economics to complement traditional market models in shaping policies to govern increasingly complex market conditions. This book clarifies, integrates and applies diverse perspectives to salient issues of governance and presents them in an accessible manner. It will be an invaluable contribution to this field. Regulatory Transformations Bettina Lange, Fiona Haines, Dania Thomas, 2015-09-10. The issue of whether transnational risk can be regulated through a social sphere goes to the heart of what John Ruggie has described as embedded liberalism: how capitalist countries have reconciled markets with the social community that markets require to survive and thrive. This collection, located in the wider debates about global capitalism and its regulation, tackles the challenge of finding a way forward for regulation. It rejects the old divisions of state and market, citizens and consumers, social movements and transnational corporations, as well as economic and social regulation. Instead, this rich multidisciplinary collection engages with a critical theme: the idea of harnessing the regulatory capacity of a social sphere by recognising the embeddedness of economic transactions within a social and political landscape. This collection therefore explores how social norms, practices, actors and institutions frame economic transactions and thereby regulate risks generated by and for business, state and citizens. A key strength of this book is its integration of three distinct areas of scholarship: Karl Polanyi's economic sociology, regulation studies and socio-legal studies of transnational hazards. The collection is distinct in that it links the study of specific transnational risk regulatory regimes back to a social theoretical discussion about economy-society interactions informed by Polanyi's work. Each of the chapters addresses the way in which economics, as well as economic and social regulation, can never be understood separately from the social, particularly in the transnational context. Endorsement: This thought-provoking collection asks the most critical question of our time: how to civilise markets through social accountability and political action. The climate and financial crises we face show how crucial this challenge is. Lange, Haines and Thomas have put together a series of fruitful case studies of the possibilities for embedding economic relationships in social relationships by a series of top-class researchers within their own illuminating and sensitive framing of the issue. Professor Christine Parker, Professor of Regulatory Studies at Monash University. *The Economic Psychology of Incentives* A. Pepper, 2015-07-07. This book proposes a revised theory of agency drawing on ideas from behavioural economics and built on more robust assumptions about human behaviour than the standard principal-agent model. The book proposes new design principles for executive pay but also explains the difficulties in changing current executive pay practices. **The Current State of Domain Name Regulation** Konstantinos Komaitis, 2010-07-12. This book

evaluates the behaviour of domain names within the rule of law as well as their regulatory frameworks Drawing on experience from various jurisdictions the book determines the property nature of domain names and suggests solutions as to how the regulation of domain names can be reformed      *Microeconomic Analysis (Routledge Revivals)* David Currie,David Peel,Will Peters,2016-05-20 First published in 1981 this book brings together a collection of essays on microeconomics and development presented at the conference of the Association of University Teachers of Economics Topics covered include the intergenerational transfer of economic inequality a review of the recent development in the theory of equity in the economy s distribution and production process labour and unemployment market structure and international trade taxation and the public sector Third World industrialisation and Indian agriculture This book will be of interest to students of Economics and Development Studies      *Superfairness, Application and Theory* William J. **Fairness** Nicholas Rescher, 2018-02-06 In theory and practice the notion of fairness is far from simple The principle is often elusive and subject to confusion even in institutions of law usage and custom In Fairness Nicholas Rescher aims to liberate this concept from misunderstandings by showing how its definitive characteristics prevent it from being absorbed by such related conceptions as paternalistic benevolence radical egalitarianism and social harmonization Rescher demonstrates that equality before the state is an instrument of justice not of social utility or public welfare and argues that the notion of fairness stops well short of a literal egalitarianism Rescher disposes of the confusions arising from economists penchant to focus on individual

preferences from decision theorists concern for averting envy and from political theorists sympathy for egalitarianism In their place he shows how the idea of distributive equity forms the core of the concept of fairness in matters of distributive justice The coordination of shares with valid claims is the crux of the concept of fairness In Rescher's view this means that the pursuit of fairness requires objective rather than subjective evaluation of the goods being shared This is something quite different from subjective equity based on the personal evaluation of goods by those laying claim to them Insofar as subjective equity is a concern the appropriate procedure for its realization is a process of maximum value distribution Further Rescher demonstrates that in matters of distributive justice the distinction between new ownership and preexisting ownership is pivotal and calls for proceeding on very different principles depending on the case How one should proceed depends on context and what is adjudged fair is pragmatic in that there are different requirements for effectiveness in achieving the aims and purposes of the sort of distribution that is intended Rescher concludes that fairness is a fundamentally ethical concept Its distinctive *modus operandi* contrasts sharply with the aims of paternalism preference maximizing or economic advantage Fairness will be of interest to philosophers economists and political scientists Intellectual Property and Information

Wealth Peter K. Yu, 2006-12-30 Until recently issues of intellectual property were relegated to the experts attorneys legal scholars rightsholders and technology developers who wrangled over interpretations and enforcement of copyright patent and trademark protections But in today's knowledge based economy intellectual property protection has taken on fundamentally new proportions as a subject of urgency for businesses whose survival depends on protection of their intangible assets and as a subject of cultural importance that grabs front page headlines as the controversy over Napster and high profile revelations of plagiarism for example have illustrated This landmark set of essays brings new clarity to the issues as societies around the world grapple with the intricacies and complexities of intellectual property and its impact on business law policy and culture Featuring insights from leading scholars and practitioners Intellectual Property and Information Wealth provides rigorous analysis historical context and emerging practical applications from the public private and non profit sectors Volume 1 focuses on protections to novels films sound recordings computer programs and other creative products and covers such issues as authorship duration of copyright fair use of copyrighted materials and the implications of the Internet and peer to peer file sharing Volume 2 explains the fundamental protections to inventors of devices mechanical processes chemical compounds and other inventions and examines such issues as the scope and limits of patent protection research exemptions and infringement IP in the software and biotech industries and trade secrets Volume 3 looks at the protections to distinctive symbols and signs including brand names and unique product designs and features chapters on consumer protection trademark and the first amendment brand licensing publicity and cultural images and domain names Volume 4 takes the discussion to the global level addressing a wide range of issues including not only enforcement of IP protections across borders but also their implications for international trade and investment economic development human
