Superstrings: The First 15 Years Of Superstring Theory (Reprints + Commentary - In 2 Volumes) John H Schwarz, 1985-09-01 The discovery by Green and Schwarz in 1984 that ten dimensional superstring theory is anomaly free and finite only if the Yang Mills gauge group is $SO(32)$ or $E_8 \times E_8$ has made the phenomenological possibilities of superstrings evident This has resulted in a sudden surge of interest in superstrings unification Since this fast developing field is new to almost all theoretical physicist this collection of basic pre 1985 references should be very valuable This two volumes contain over 1000 pages of reprints plus some introductory comments by J Schwarz

Supergravities in Diverse Dimensions Abdus Salam, Ergin Sezgin, 1989 This book is a collection of reprints on the structure of Poincaré anti de Sitter and conformal supergravity theories in one to eleven dimensions their anomalies and compactification Each chapter contains introductory comments and an extensive list of references

Handbook of Quantum Gravity Cosimo Bambi, Leonardo Modesto, Ilya Shapiro, 2024-12-03 The search for a theory of quantum gravity is one of the most important and fascinating problems in modern theoretical physics While we do not have yet a complete theory of quantum gravity significant advancements have been done in the past decades In this handbook every section is dedicated to a specific approach towards a theory of quantum gravity and is edited by the leading experts in the field This book represents both a valuable resource for graduate students and an important reference for researchers in

Books in Print ,1993 Progress in String, Field and Particle Theory L. Baulieu,Eliezer Rabinovici,Jeff Harvey,Boris Pioline,Paul Windey,2012-12-06 The NATO Advanced Study Institute and EC Summer School Progress in String Field and Particle Theory was held in Cargèse from June 25th till July 11th 2002 The main focus of the school was the recent progress in the very active areas of superstring theory quantum gravity and the theory of elementary particles It covered topical problems in domains such as duality between gravity and gauge interactions string field theory tachyon condensation non commutative field theory string cosmology and string phenomenology The School featured daily introductory lectures and topical seminars An informal Gong Show session allowed young post doctoral researchers and senior graduate students to make a concise presentation of their current work The School gave an excellent opportunity to the youngest researchers to establish a close relationship with their seniors and with the lecturers These proceedings will further serve in fixing the acquired knowledge and hopefully become a useful reference for anyone working in this fascinating domain of physics Some of the contributions provide an elementary introduction to their subject while other ones are more geared to the specialist We are deeply indebted to the NATO Division for Scientific Affairs for funding and for their constant attention for our meetings and to the European Commission for a High Level Scientific Conference grant HPCFCT 2001 00298 *Advances*

in Geometry and Lie Algebras from Supergravity Pietro Giuseppe Frè,2018-02-24 This book aims to provide an overview of several topics in advanced differential geometry and Lie group theory all of them stemming from mathematical problems in supersymmetric physical theories It presents a mathematical illustration of the main development in geometry and symmetry theory that occurred under the fertilizing influence of supersymmetry supergravity The contents are mainly of mathematical

nature but each topic is introduced by historical information and enriched with motivations from high energy physics which help the reader in getting a deeper comprehension of the subject

Gravity, a Geometrical Course Pietro Giuseppe Frè, 2012-10-24 Gravity a Geometrical Course presents general relativity GR in a systematic and exhaustive way covering three aspects that are homogenized into a single texture i the mathematical geometrical foundations exposed in a self consistent contemporary formalism ii the main physical astrophysical and cosmological applications updated to the issues of contemporary research and observations with glimpses on supergravity and superstring theory iii the historical development of scientific ideas underlying both the birth of general relativity and its subsequent evolution The book is divided in two volumes Volume Two is covers black holes cosmology and an introduction to supergravity The aim of this volume is two fold It completes the presentation of GR and it introduces the reader to theory of gravitation beyond GR which is supergravity Starting with a short history of the black hole concept the book covers the Kruskal extension of the Schwarzschild metric the causal structures of Lorentzian manifolds Penrose diagrams and a detailed analysis of the Kerr Newman metric An extensive historical account of the development of modern cosmology is followed by a detailed presentation of its mathematical structure including non isotropic cosmologies and billiards de Sitter space and inflationary scenarios perturbation theory and anisotropies of the Cosmic Microwave Background The last three chapters deal with the mathematical and conceptual foundations of supergravity in the frame of free differential algebras Branes are presented both as classical solutions of the bulk theory and as world volume gauge theories with particular emphasis on the geometrical interpretation of kappa supersymmetry The rich bestiary of special geometries underlying supergravity lagrangians is presented followed by a chapter providing glances on the equally rich collection of special solutions of supergravity Pietro Fr is Professor of Theoretical Physics at the University of Torino Italy and is currently serving as Scientific Counsellor of the Italian Embassy in Moscow His scientific passion lies in supergravity and all allied topics since the inception of the field in 1976 He was professor at SISSA worked in the USA and at CERN He has taught General Relativity for 15 years He has previously two scientific monographs Supergravity and Superstrings and The N 2 Wonderland He is also the author of a popular science book on cosmology and two novels in Italian

Gauge Theories, Applied Supersymmetry And Quantum Gravity Ii - Proceedings Of The Workshop Alexander Sevrin, Kellogg S Stelle, Kris Thielemans, Antoine Van Proeyen, 1997-06-19 This volume contains the proceedings of a meeting held at Imperial College which is devoted to recent developments in string theory supersymmetry and quantum gravity The volume comprises two different sections The first consists of five pedagogical reviews by prominent physicists covering the currently important subjects of supermembranes duality D branes new non perturbative methods and string phenomenology The second section consists of research reports in these areas and also on other currently important topics such as supersymmetric gauge theories two dimensional quantum gravity and black holes

Supersymmetric Field Theories Sergio Cecotti, 2015-01-08 Adopting an elegant geometrical approach this advanced pedagogical text describes deep and intuitive methods for understanding the subtle logic of supersymmetry while avoiding lengthy computations The book describes how complex results and formulae obtained using other approaches can be significantly simplified when translated to a geometric setting Introductory chapters describe geometric structures in field theory in the general case while detailed later chapters address specific structures such as parallel tensor fields G structures and isometry groups The relationship between structures in supergravity and periodic maps of algebraic manifolds Kodaira Spencer theory modularity and the arithmetic properties of supergravity are also addressed Relevant geometric concepts are introduced and described in detail providing a self contained toolkit of useful techniques formulae and constructions Covering all the material necessary for the application of supersymmetric field theories to fundamental physical questions this is an outstanding resource for graduate students and researchers in theoretical physics Brane Worlds Alberto Salvio, 2013-06-12 This book is roughly divided in three parts The first one is a general introduction to theories with extra dimensions and more specifically to brane worlds Both old fashioned topics such as Kaluza Klein theories and more modern aspects e g Large Extra Dimensions and Randall Sundrum models are discussed The second and third parts which we refer to as Part I and II respectively are essentially two monographs There the reader is guided through the construction of the 4D effective field theory derived from higher dimensional in particular five dimensional and six dimensional models Part I is devoted to the study of how the heavy Kaluza Klein modes contribute to the low energy dynamics of the light modes Part II concerns instead the analysis of the spectrum arising from non standard compactifications of six dimensional supersymmetric theories involving a warp factor and conical defects in the internal manifold Several applications of the above mentioned topics are discussed providing an up to date overview of these subjects Cornelius Lanczos, Collected Published Papers with Commentaries Cornelius Lanczos, 1998 **Recent Developments in Pseudo-Riemannian Geometry** Dmitrii Vladimirovich Alekseevskii, 2008 This book provides an introduction to and survey of recent developments in pseudo Riemannian geometry including applications in mathematical physics by leading experts in the field Topics covered are Classification of pseudo Riemannian symmetric spaces Holonomy groups of Lorentzian and pseudo Riemannian manifolds Hypersymplectic manifolds Anti self dual conformal structures in neutral signature and integrable systems Neutral Kahler surfaces and geometric optics Geometry and dynamics of the Einstein universe Essential conformal structures and conformal transformations in pseudo Riemannian geometry The causal hierarchy of spacetimes Geodesics in pseudo Riemannian

manifolds Lorentzian symmetric spaces in supergravity Generalized geometries in supergravity Einstein metrics with Killing leaves The book is addressed to advanced students as well as to researchers in differential geometry global analysis general relativity and string theory It shows essential differences between the geometry on manifolds with positive definite metrics and on those with indefinite metrics and highlights the interesting new geometric phenomena which naturally arise in the indefinite metric case The reader finds a description of the present state of the art in the field as well as open problems which can stimulate further research

$N = 2$ Supergravity in $D = 4, 5, 6$ Dimensions Edoardo Lauria, Antoine Van Proeyen, 2020-03-11 This graduate level primer presents a tutorial introduction to and overview of $N = 2$ supergravity theories with 8 real supercharges and in 4 5 and 6 dimensions First the construction of such theories by superconformal methods is explained in detail and relevant special geometries are obtained and characterized Following the relation between the supergravity theories in the various dimensions is discussed This leads eventually to the concept of very special geometry and quaternionic Kähler manifolds This concise text is a valuable resource for graduate students and young researchers wishing to enter the field quickly and efficiently
