Liberating Sociology: From Newtonian Toward Quantum Imaginations: Volume 1: Unriddling the Quantum

Enigma Mohammad H. Tamdgidi, 2020-01-20 In this major new study in the sociology of scientific knowledge social theorist Mohammad H Tamdgidi reports having unriddled the so called quantum enigma This book opens the lid of the Schrödinger's Cat box of the quantum enigma after decades and finds something both odd and familiar Not only the cat is both alive and dead it has morphed into an elephant in the room in whose interpretation Einstein Bohr Bohm and others were each both right and wrong because the enigma has acquired both localized and spread out features whose unriddling requires both physics and sociology amid both transdisciplinary and transcultural contexts The book offers in a transdisciplinary and transcultural sociology of self knowledge framework a relativistic interpretation to advance a liberating quantum sociology Deeper methodological grounding to further advance the sociological imagination requires investigating whether and how relativistic and quantum scientific revolutions can induce a liberating reinvention of sociology in favor of creative research and a just global society This however necessarily leads us to confront an elephant in the room the quantum enigma In Unriddling the Quantum Enigma the first volume of the series commonly titled Liberating Sociology From Newtonian toward Quantum Imaginations sociologist Mohammad H Tamdgidi argues that unriddling the quantum enigma depends on whether and how we succeed in dehabituating ourselves in favor of unified relativistic and quantum visions from the historically and ideologically inherited classical Newtonian modes of imagining reality that have subconsciously persisted in the ways we have gone about posing and interpreting or not the enigma itself for more than a century Once this veil is lifted and the enigma unriddled he argues it becomes possible to reinterpret the relativistic and quantum ways of imagining reality including social reality in terms of a unified nonreductive creative dialectic of part and whole that fosters quantum sociological imaginations methods theories and practices favoring liberating and just social outcomes The essays in this volume develop a set of relativistic interpretive solutions to the quantum enigma Following a survey of relevant studies and an introduction to the transdisciplinary and transcultural sociology of self knowledge framing the study overviews of Newtonianism relativity and quantum scientific revolutions the quantum enigma and its main interpretations to date are offered They are followed by a study of the notion of the wave particle duality of light and the various experiments associated with the quantum enigma in order to arrive at a relativistic interpretation of the enigma one that is shown to be capable of critically cohering other offered interpretations The book concludes with a heuristic presentation of the ontology epistemology and methodology of what Tamdgidi calls the creative dialectics of reality The volume essays involve critical comparative integrative reflections on the relevant works of founding and contemporary scientists and scholars in the field This study is the first in the monograph series Tayyeb Series in East West Research and Translation of Human Architecture

Journal of the Sociology of Self Knowledge XIII 2020 published by OKCIR Omar Khayyam Center for Integrative Research in Utopia Mysticism and Science Utopistics OKCIR is dedicated to exploring in a simultaneously world historical and self reflective framework the human search for a just global society It aims to develop new conceptual methodological theoretical historical practical pedagogical inspirational and disseminative structures of knowledge whereby the individual can radically understand and determine how world history and her his selves constitute one another Reviews Mohammad H Tamdgidi s Liberating Sociology From Newtonian Toward Quantum Imaginations Volume 1 Unriddling the Quantum Enigma hits the proverbial nail on the head of an ongoing problem not only in sociology but also much social science namely many practitioners allegiance consciously or otherwise to persisting conceptions of science that get in the way of scientific and other forms of theoretical advancement Newtonianism has achieved the status of an idol and its methodology a fetish the consequence of which is an ongoing failure to think through important problems of uncertainty indeterminacy multivariation multidisciplinary and false dilemmas of individual agency versus structure among many others Tamdgidi has done great service to social thought by bringing to the fore this problem of disciplinary decadence and offering in effect a call for its teleological suspension thinking beyond disciplinarity through drawing upon and communicating with the resources of quantum theory not as a fetish but instead as an opening for other possibilities of social including human understanding The implications are far reaching as they offer as the main title attests liberating sociology from persistent epistemic shackles and thus many disciplines and fields connected to things social This is exciting work A triumph The reader is left with enthusiasm for the second volume and theorists of many kinds with proverbial work to be done Professor Lewis R Gordon Honorary President of the Global Center for Advanced Studies and author of Disciplinary Decadence Living Thought in Trying Times Routledge Paradigm 2006 and Freedom Justice and Decolonization Routledge forthcoming 2020 Social sciences are still using metatheoretical models of science based on 19th century newtonian concepts of time and space Mohammad H Tamdgidi has produced a tour de force in social theory leaving behind the old newtonian worldview that still informs the social sciences towards a 21st century non dualistic non reductionist transcultural transdisciplinary post Einsteinian quantum concept of TimeSpace Tamdgidi goes beyond previous efforts done by titans of social theory such as Immanuel Wallerstein and Kyriakos Kontopoulos This book is a quantum leap in the social sciences at large Tamdgidi decolonizes the social sciences away from its Eurocentric colonial foundations bringing it closer not only to contemporary natural sciences but also to its convergence with the old Eastern philosophical and mystical worldviews This book is a masterpiece in social theory for a 21st century decolonial social science A must read Professor Ramon Grosfoguel University of California at Berkeley Tamdgidi s Liberating Sociology succeeds in adding physical structures to the breadth of the world changing vision of C Wright Mills the man who mentored me at Columbia Relativity theory and quantum mechanics can help us to understand the human universe no less than the physical universe Just as my Creating Life Before Death challenges bureaucracy s

conformist orientation so does Liberating Sociology liberate the infinite possibilities inherent in us Given our isolation in the Coronavirus era we have time to follow Tamdgidi in his journey into the depth of inner space where few men have gone before It is there that we can gain emotional strength just as Churchill Roosevelt and Mandela empowered themselves That personal development was needed to address not only their own personal problems but also the mammoth problems of their societies We must learn to do the same Bernard Phillips Emeritus Sociology Professor Boston University

Communitarian International Relations Emanuel Adler,2005 Emanuel Adler is one of the leading IR theorists of his generation This volume brings together a collection of his articles including four new and previously unpublished chapters

Beyond Atheism, Beyond God Philip A. Stahl,2013-08 In his new study Beyond Atheism Beyond God author Philip A Stahl uses atheism as a rational stepping stone to arrive at an emergent conception of the universe exposing features that might be described as transcendent He presents an impersonal approach to Being that is devoid of any specific religious overtones or affiliations Each person becomes a quantum based co creator in his or her own right according to physicist Henry Stapp As such we are able to thereby see ourselves and our humanity in a new light as opposed to being merely reactive cogs in a vast mechanical reductionist machine Effectively we emerge as much more than assemblies of molecules This volume the fourth and final entry in Stahl s series on atheism seeks to arrive at a transcendent concept of being that also surpasses absolutism and naive or dogmatic deity templates It considers the development of a more realistic cogent and effective ethics and morality less likely to be exploited by the power mongers or sacred source apologists and it answers the question of whether God exists though not in the way one would normally assume **American Journal of Physics** ,1981 Matrix of Mystery

Herbert V. Guenther,2001-05-01 World renowned Buddhist scholar Herbert V Guenther here offers the first comprehensive study of the rDzogs chen or Ati tradition of the Nyingma school of Tibetan Buddhism Matrix of Mystery explores man s ability to preserve as well as transmit essential insights into the structure of reality Utilizing a key root Buddhist scripture the Guhyagarbha Matrix of Mystery along with dozens of commentarial Tibetan textual sources Guenther presents the most profound teachings of the Buddhist tradition which represent the culmination of religious thought and practice in Tibet In relating these teachings in modern scientific and humanistic perspectives he demonstrates how in many cases the traditional religious and modern secular perspectives on the nature of reality interface Professor Guenther discusses the mandala and the deities that reside therein the organizing principles of body speech mind quality and action the three bodies of the buddha trikaya the inseparability of prajna and skillful means and the complex field of Buddhist iconography Throughout quotations from numerous Tibetan sources are used to illustrate various teachings His book will appeal to any serious student of Tibetan Buddhism *Coherent Optical Interactions in Semiconductors* R.T. Phillips,2013-06-29 The NATO Advanced Research Workshop on Coherent Optical Processes in Semiconductors was held in Cambridge England on August 11 14 1993 The idea of holding this Workshop grew from the recent upsurge in activity on coherent transient effects in

semiconductors The development of this field reflects advances in both light sources and the quality of semiconductor structures such that tunable optical pulses are now routinely available whose duration is shorter than the dephasing time for excitonic states in quantum wells It was therefore no surprise to the organisers that as the programme developed there emerged a heavy emphasis on time resolved four wave mixing particularly in quantum wells Nevertheless other issues concerned with coherent effects ensured that several papers on related problems contributed some variety The topics discussed at the workshop centred on what is a rather new field of study and benefited enormously by having participants representing many of the principal groups working in this area Several themes emerged through the invited contributions at the Workshop One important development has been the careful examination of the two level model of excitonic effects a model which has been remarkably successful despite the expected complexities arising from the semiconductor band structure Indeed modest extensions to the two level model have been able to offer a useful account for some of the complicated polarisation dependence of four wave mixing signals from GaAs quantum wells This work clearly is leading to an improved understanding of excitons in confined systems

Artificial intelligence - When do machines take over? Klaus Mainzer, 2019-10-14 Everybody knows them Smartphones that talk to us wristwatches that record our health data workflows that organize themselves automatically cars airplanes and drones that control themselves traffic and energy systems with autonomous logistics or robots that explore distant planets are technical examples of a networked world of intelligent systems Machine learning is dramatically changing our civilization We rely more and more on efficient algorithms because otherwise we will not be able to cope with the complexity of our civilizing infrastructure But how secure are AI algorithms This challenge is taken up in the 2nd edition Complex neural networks are fed and trained with huge amounts of data big data The number of necessary parameters explodes exponentially Nobody knows exactly what is going on in these black boxes In machine learning we need more explainability and accountability of causes and effects in order to be able to decide ethical and legal questions of responsibility e g in autonomous driving or medicine Besides causal learning we also analyze procedures of tests and verification to get certified AI programs Since its inception AI research has been associated with great visions of the future of mankind It is already a key technology that will decide the global competition of social systems Artificial Intelligence and Responsibility is another central supplement to the 2nd edition How should we secure our individual liberty rights in the AI world This book is a plea for technology design AI must prove itself as a service in society

American Book Publishing Record ,1982-04 **Interactions in Ultracold Gases** Matthias Weidemüller, Claus Zimmermann, 2011-02-10 Arising from a workshop this book surveys the physics of ultracold atoms and molecules taking into consideration the latest research on ultracold phenomena such as Bose Einstein condensation and quantum computing Several reputed authors provide an introduction to the field covering recent experimental results on atom and molecule cooling as well as the theoretical treatment *Amino Acids, Electrochemical Reactions, Sensory Interactions, and Molecular*

Biology Ron Legarski, 2024-09-09 Amino Acids Electrochemical Reactions Sensory Interactions and Molecular Biology Exploring Life's Building Blocks offers a comprehensive journey into the foundational elements of life examining the intricate relationships between amino acids electrochemical processes and sensory systems Written by Ron Legarski this book explores how the molecular structures that make up our bodies interact with environmental factors to shape our health perception and biological functions This detailed work provides a clear analysis of how amino acids serve as the building blocks of proteins how electrochemical reactions power cellular functions and how these processes are vital for sensory systems like vision hearing taste and touch By diving into the molecular biology behind these essential functions Legarski explains the fundamental mechanisms that allow us to interact with the world around us The book also delves into how environmental influences such as toxins pollutants and climate factors affect molecular and sensory systems impacting everything from our neurological health to our immune responses Through its exploration of gene expression cellular communication and electrochemical balance this book connects the molecular basis of life to larger themes of human interaction and environmental adaptation Accessible to both scientific and general audiences Amino Acids Electrochemical Reactions Sensory Interactions and Molecular Biology offers a valuable resource for students researchers and health professionals looking to deepen their understanding of molecular biology and its practical applications Through clear explanations and expert insights Ron Legarski sheds light on the unseen processes that drive life itself from the micro to the macro level This work serves as a crucial guide for understanding how the body's internal molecular world interacts with external conditions presenting a detailed exploration of life's building blocks and how they influence everything from cellular function to sensory perception *Subject Catalog* Library of Congress, **Quest for Eye Color Modification** Kambiz

Thomas Moazed, 2024-09-02 This book examines the existing modalities of changing the color of the eye with their limitations There has been no possible way to change the color of the eye with the natural looking result as of today There have been many years of research and trials due to the immense public desire to be able to change the color of their eyes without success From topical eye drops and colored contact lenses to the more aggressive treatments such as laser ablation corneal tattooing or even iris implants all have been tried and failed to achieve a natural looking result This book explains the reason for the failure of each of these approaches without bias and discusses the advantages and disadvantages of each of these modalities The book will cover the need for new approaches and new equipment and instruments that are necessary to achieve the goal of being able to modify the color of the eye to look natural Chapters will also explore the scientific theoretical possibilities of achieving the task of eye color modification in hope that future researchers have a blueprint for their studies and experiments to overcome this very difficult task **Philosophy in Science**, 1993 **The Philosophical Review**, 1981 **Journal of Current Laser Abstracts**, 1981 **Subject Catalog**, 1981 Library of Congress, 1981
