**Supramolecular Structure and Function** Greta Pifat, 2012-12-06 The molecular basis of life has been a rapidly growing field of science There is perhaps no other field where such diverse profiles of scientists ranging from applied mathematicians and theoretical physicists to experimental biologists and medical doctors physicians are compelled to communicate and even to collaborate This diversity makes the exchange of information richer but at the same time more cumbersome One way to facilitate the exchange of information and to overcome the barriers between the different languages used by physicists chemists and biologists is to organize a meeting on a subject of common interest A particularly suitable form of such a meeting for younger scientists is a school at an undergraduate or postgraduate level This volume contains a collection of lectures presented at the International Summer School in Biophysics held under the title Supramolecular Structure and Function in Dubrovnik Yugoslavia in September 1981 The topics discussed at the school were inter and intramolecular interactions in biological systems and structure organization and function of biological macromolecules and supramolecular structures Although not all the lectures could be prepared in a written form on time for publication we hope that the present volume contains valuable up to date information on various aspects of the molecular basis of life We wish to express our gratitude to the eminent authors and to state that having received so much valuable assistance from them we as editors can only attach our names to apologies for any errors that may remain [Supramolecular structure and function six](#)

Greta Pifat-Mrzljak, 1998 **Supramolecular Structure and Function 8** Greta Pifat-Mrzljak, 2006-01-16 An enormous amount of new knowledge on the molecular basis of various biological phenomena has emerged in the rapidly expanding field of bioscience Since the frontiers in scientific research are difficult to define the creation of new knowledge depends not only on new methods and concepts but also on interaction with other fields of research The principles and methods of biophysics should be a rational language for discussion not only between scientists of the different disciplines of natural sciences such as physics mathematics biochemistry molecular biology and biotechnology but also for medicine and social sciences as well This is the general philosophy behind the organization of the Summer Schools organized by Rudjer Institute Zagreb Croatia and the Croatian Biophysical Society The International Summer Schools on Biophysics have a very broad scope This is in contrast to the other workshops or schools which are centred mainly on one topic or technique The intention was to organize courses which provided advanced training at doctoral or postdoctoral level in biosciences Therefore the Schools essentially have a catalytic role and are complementary to rather than competing with activities of parallel national or international programmes [Supramolecular Structure and Function 10](#) Jasminka Brnjas-Kraljević, Greta Pifat-Mrzljak, 2011-03-22 The book is based on lectures presented on the International Summer School on Biophysics held in Croatia in September 2009 The advantage of the School is that it provides advanced training in very broad scope of areas related to biophysics contrary to other similar schools or workshops that are centered mainly on one topic or technique In this volume tenth in the row the

papers in the field of biophysics are presented The topics are biological phenomena from single protein to macromolecular aggregations structure by using variant physical methods NMR EPR FTIR Mass Spectrometry etc The interrelationship of supramolecular structures and their functions is enlightened by applications of principals of these physical methods in the biophysical and molecular biology context **Supramolecular Structure and Function 9** Greta Pifat-Mrzljak,2007-10-08

**Endotoxins: Structure, Function and Recognition** Xiaoyuan Wang, Peter J. Quinn, 2010-06-30 Endotoxins are potentially toxic compounds produced by Gram negative bacteria including some pathogens Unlike exotoxins which are secreted in soluble form by live bacteria endotoxins are comprised of structural components of bacteria Endotoxins can cause a whole body inflammatory state sepsis leading to low blood pressure multiple organ dysfunction syndrome and death This book brings together contributions from researchers in the forefront of these subjects It is divided into two sections The first deals with how endotoxins are synthesized and end up on the bacterial surface The second discussed how endotoxins activate TLR4 and in turn how TLR4 generates the molecular signals leading to infectious and inflammatory diseases The way endotoxins interact with the host cells is fundamental to understanding the mechanism of sepsis and recent research on these aspects of endotoxins has served to illuminate previously undescribed functions of the innate immune system This volume presents a description of endotoxins according to their genetic constitution structure function and mode of interaction with host cells
