The

Architecture of Modern Italy Terry Kirk,2005-06-02 Modern Italy may sound like an oxymoron For Western civilization Italian culture represents the classical past and the continuity of canonical tradition while modernity is understood in contrary terms of rupture and rapid innovation Charting the evolution of a culture renowned for its historical past into the 10 modern era challenges our understanding of both the resilience of tradition and the elasticity of modernity We have a tendency when imagining Italy to look to a rather distant and definitely premodern setting The ancient forum medieval cloisters baroque piazzas and papal palaces constitute our ideal itinerary of Italian civilization The Campo of Siena Saint Peter s all of Venice and San Gimignano satisfy us with their seemingly unbroken panoramas onto historical moments untouched by time but elsewhere modern intrusions alter and obstruct the view to the landscapes of our expectations As seasonal tourist or seasoned historian we edit the encroachments time and change have wrought on our image of Italy The learning of history is always a complex task one that in the Italian environment is complicated by the changes wrought everywhere over the past 250 years Culture on the peninsula continues to evolve with characteristic vibrancy Italy is not a museum To think of it as such as a disorganized yet phenomenally rich museum unchanging in its exhibits is to misunderstand the nature of the Italian cultural condition and the writing of history itself

Architecture and the Novel under the Italian Fascist Regime Francesca Billiani, Laura Pennacchietti, 2019-09-14

Architecture and the Novel under the Italian Fascist Regime discusses the relationship between the novel and architecture during the Fascist period in Italy 1922-1943. By looking at two profoundly diverse aesthetic phenomena within the context of the creation of a Fascist State, art, Billiani and Pennacchietti argue that an effort of construction or reconstruction was the main driving force behind both projects: the advocated revolution of the novel form, realism, and that of architecture, rationalism. The book is divided into seven chapters which in turn analyze the interconnections between the novel and architecture in theory and in practice. The first six chapters cover debates on State art, on the novel, and on architecture, as well as their historical development and their unfolding in key journals of the period. The last chapter offers a detailed analysis of some important novels and buildings which have in practice realized some of the key principles articulated in the theoretical disputes.

The Meaning of Modern Architecture

Hans Rudolf Morgenthaler, 2016-03-09. Using empathy as established by the Vienna School of Art History, complemented by insights on how the mind processes visual stimuli as demonstrated by late 19th-century psychologists and art theorists, this book puts forward an innovative interpretative method of decoding the forms and spaces of Modern buildings. This method was first developed as scholars realized that the new abstract art appearing needed to be analysed differently than the previous figurative works. Since architecture experienced a similar development in the 1920s and 30s, this book argues that the empathetic method can also be used in architectural interpretation. While most existing scholarship tends to focus on formal and functional analysis, this book proposes that Modern architecture is too diverse to be reduced to a few common formal or ornamental features. Instead, by relying on the viewer's innate psycho-physiological perceptive abilities, sensual and intuitive understandings of composition, form, and space are emphasized. These aspects are especially significant because Modern Architecture lacks the traditional stylistic signs. Including building analyses, it shows how, by visually reducing cubical forms and spaces to linear configurations, the exteriors and interiors of Modern buildings can be interpreted via human perceptive abilities as dynamic movement systems commensurate with the new industrial transportation age. This reveals an inner necessity: these buildings express about themselves and their culture rather than just an explanation of how they are assembled and how they should be used. The case studies highlight the contrasts between buildings designed by different architects rather than concentrating on the few features that relate them to the zeitgeist. It analyses the buildings directly as the objects of study, not indirectly as designs filtered through a philosophical or theoretical discourse. The book demonstrates that with technology and science affecting culture.

Architectures of Bureaucracy Jens van de Maele, 2025-01-27 This monograph examines the interrelationship between politics and modernist architecture in interwar Belgium focusing on political architectural and administrative elites as propagators of new ideas of governance While Belgium was strongly influenced by neighbouring France and Germany it also developed its own avant garde approaches to socio political problems In the second half of the 1930s the country was the scene of a remarkable political and architectural experiment involving an ambitious plan for the large scale construction of modernist government office buildings These buildings were seen as essential to the development of a technocratic model of governance aimed at strengthening the role of the executive and minimising the influence of parliament More specifically the efficient new office architecture was supposed to create a new type of perfect civil servant whose loyalties would no longer lie with political parties but with scientists and management experts Such experts and scientists constituted a rising elite of homines novi with strong though often veiled political ambitions As such this book contributes to our understanding of political culture in the age of extremes

Materials and Meaning in Architecture Nathaniel Coleman, 2020-02-20 Interweaving architecture philosophy and cultural history *Materials and Meaning in Architecture* develops a rich and multi dimensional exploration of materials and materiality in an age when architectural practice seems otherwise preoccupied with image and visual representation Arguing that architecture is primarily experienced by the whole body rather than chiefly with the eyes this broad ranging study shows how the most engaging built works are as tactile as they are sensuous communicating directly with the bodily senses especially touch It explores the theme of material imagination and the power of establishing place identity in an architect's work to consider the enduring expressive possibilities of material use in architecture The book's chapters can be dipped into each individual chapter providing close readings of built works by selected modern masters Scarpa Zumthor Williams and Tsien insights into key texts and theories Ruskin Loos Bachelard or short cultural histories of materials wood brick concrete steel and glass And yet taken together the chapters build to a powerful book length argument about how meaning accrues to materials through time and about the need to reinsert the bodily experience of materiality into architectural design It is thus also in part a manifesto arguing for architecture to act as a bulwark against the tide of an increasingly depersonalised built environment With insights for a wide range of readers ranging from students through to researchers and professional designers *Materials and*

Fascist Modernism in Italy Francesca Billiani, 2021-08-26

Between 1917 to 1975 Germany Italy Portugal the Soviet Union and Spain shifted from liberal parliamentary democracies to authoritarian and totalitarian dictatorships seeking total control mass consensus and the constitution of a new man woman as the foundation of a modern collective social identity As they did so these regimes uniformly adopted what we would call a modernist aesthetic huge scale experiments in modernism were funded and supported by fascist and totalitarian dictators Famous examples include Mussolini s New Rome at EUR or the Stalinist apartment blocks built in urban Russia Focusing largely on Mussolini s Italy Francesca Billiani argues that modernity was intertwined irrecoverably with fascism that too often modernist buildings art and writings are seen as a purely cultural output when in fact the principles of modernist aesthetics constitute and are constituted by the principles of fascism The obsession with the creation of the new man in art and in reality shows this synergy at work This book is a key contribution to the field of twentieth century history particularly in the study of fascism while also appealing to students of art history and philosophy
