field of biomaterials with a special interest in the creation of polymeric materials with improved biocontact properties via surface engineering

Mineral Scale Formation and Inhibition Z. Amjad, 2013-06-29 This book documents the proceedings of the symposium Mineral Scale Formation and Inhibition held at the American Chemical Society Annual Meeting August 21 to 26 1994 in Washington D C The symposium sponsored by the Division of Colloid and Surface Chemistry was held in honor of Professor George H Nancollas for his pioneering work in the field of crystal growth from solution A total of 30 papers were presented by a wide spectrum of scientists This book also includes papers that were not presented but were in the symposium program The separation of a solid by crystallization is one of the oldest and perhaps the most frequently used operations in chemistry Because of its widespread applicability in recent years there has been considerable interest exhibited by academic and industrial scientists in understanding the mechanisms of crystallization of sparingly soluble salts The salt systems of great interest in industrial water treatment area i e cooling and boiler include carbonates sulfates phosphates and phosphonates of alkaline earth metals Although not as common as calcium carbonate and calcium sulfate barium and strontium sulfates have long plagued oil field and gas production operations The build up of these sparingly soluble salts on equipment surfaces results in lower heat transfer efficiency increased corrosion rates increased pumping costs etc In the laundry application insoluble calcium carbonate tends to accumulate on washed fabrics and washing equipment parts resulting in undesirable fabric encrustation or scaling

Cariology for the Nineties William H. Bowen, Lawrence A. Tabak, 1993 Dental caries despite significant reductions in some populations continues to be a major public health problem and is the most prevalent disease affecting humans However even fundamental aspects of the pathogenesis of caries remain uncertain calling for continuing scientific enquiry and the application of sophisticated techniques from epidemiology to molecular biology Although recent changes in the pattern of dental caries are identifiable available data does not reveal whether overall caries is declining The conference Cariology in the Nineties held at the University of Rochester in 1991 by focusing on the etiology pathogenesis and prevention of dental caries emphasised the need to co ordinate research in monitoring populations worldwide and to change the focus of research to reflect the changing epidemiology and patterns of dental disease Contents Keynote address Epidemiology Saliva Teeth Clinical studies Microbiology Plaque Diet Nutrition Prevention W H BOWEN is Professor and Chair Department of Dental Research University of Rochester LAWRENCE A TABAK is Professor of Dental Research and of Biochemistry University of Rochester

Biomineralization Erich Konigsberger, LanChi Konigsberger, 2006-07-11 This title takes an interdisciplinary approach to the central role of solubility in pathological biomineralisation ranging from traditional thermodynamics and kinetics to unusual concepts such as the PILP process The scientific background and expertise of the contributors ranges accordingly from solubility modelling and database development renal stone and bone implant research Mossbauer spectroscopy and structural chemistry to biochemistry and crystallisation The chapters all have a quantitative physico chemical component

rather than giving purely phenomenological descriptions The contributors deal with aspects and concepts that have not previously been common in the study of pathological biomineralisation processes

Structure, Cellular Synthesis and Assembly of Biopolymers Steven T. Case, 2013-06-29 Many naturally occurring biopolymers have unique structures and unique physical or mechanical properties The understanding of the molecular basis of these biomolecules their synthesis assembly and processing is a prerequisite for any application to the design of novel biomolecular materials Several classes of biopolymers are sampled in depth in this volume such as nanolaminated ceramics adhesive proteins eggshell proteins protein fibres and silk which are synthesized by a variety of organisms molluscs parasitic trematodes fish and insects The reader will be introduced to the biological systems to understand Nature's use of each biopolymer and the highly differentiated cells responsible for their synthesis Corresponding to the variety of organisms and possible applications of biopolymers the combined expertise of interdisciplinary teams of scientists such as the authors of this volume have the greatest opportunity to decipher and exploit Nature's skill in biopolymer engineering

Water Soluble Polymers Zahid Amjad, 2007-05-08 This volume contains a series of papers originally presented at the symposium on Water Soluble Polymers Solution Properties and Applications sponsored by the Division of Colloids and Surface Chemistry of the American Chemical Society The symposium took place in Las Vegas City Nevada on 9 to 11th September 1997 at the 214th American Chemical Society National Meeting Recognized experts in their respective fields were invited to speak There was a strong attendance from academia government and industrial research centers The purpose of the symposium was to present and discuss recent developments in the solution properties of water soluble polymers and their applications in aqueous systems Water soluble polymers find applications in a number of fields of which the following may be worth mentioning cosmetics detergent oral care industrial water treatment geothermal wastewater treatment water purification and reuse pulp and paper production sugar refining and many more Moreover water soluble polymers play a vital role in the oil industry especially in enhanced oil recovery Water soluble polymers are also used in agriculture and controlled release pharmaceutical applications Therefore a fundamental knowledge of solution properties of these polymers is essential for most industrial scientists An understanding of the basic phenomena involved in the application of these polymers such as adsorption and interaction with different substrates i.e. tooth enamel hair reverse osmosis membrane heat exchanger surfaces etc is of vital importance in developing high performance formulations for achieving optimum efficiency of the system

Dove, James J. De Yoreo, Steve Weiner, 2018-12-17 Volume 54 of *Reviews in Mineralogy and Geochemistry* focuses upon the various processes by which organisms direct the formation of minerals Our framework of examining biominerals from the viewpoints of major mineralization strategies distinguishes this volume from most previous reviews The review begins by introducing the reader to overarching principles that are needed to investigate

biomineralization phenomena and shows the current state of knowledge regarding the major approaches to mineralization that organisms have developed over the course of Earth history By exploring the complexities that underlie the synthesis of biogenic materials and therefore the basis for how compositions and structures of biominerals are mediated or not we believe this volume will be instrumental in propelling studies of biomineralization to a new level of research questions that are grounded in an understanding of the underlying biological phenomena
