Surgery Of The Central Nervous System:

Surgery of the Central Nervous System, 1919 *Surgery of the Central Nervous System* D. W. Northfield, 1973 **Surgery of the Central Nervous System**, 1885 *The Surgery of the Central Nervous System* Pietro Mortini, Filippo Gagliardi, 2024-12-02 In this book the most recent technical and technological advancements in the treatment of intracranial tumours will be described and a wide and updated review of the literature on neurosurgical pathologies with high clinical impact will be offered to the readers Technical nuances and surgical pearls as well as tricks suggested by the most renowned experts in the field will be explained and illustrated in the light of the most modern approach to oncological neurosurgical pathologies Each surgical technique will be contextualized in a multi modal approach to the pathology defining specific aims and goals of surgery and a comparative analysis of surgical and clinical results deriving from the different approaches will be systematically discussed analyzing the specific drawbacks and advantages in approaching the different pathologies and emphasizing the preservation of patient s functioning and quality of life as well as the neurological status Through this book the editors aim to provide an effective educational support to already trained and experienced neurosurgeons who want to approach the multi modal management of intracranial tumors according to the principles of Evidence Based Medicine highlighting classes of evidence by using schemes and therapeutic algorithms based on most updated data available in the literature **Stereotactic Radiosurgery for the Treatment of Central Nervous System Meningiomas** Michele Longhi, Enrico D. F. Motti, Antonio Nicolato, Piero Picozzi, 2021-08-02 Meningiomas are the most frequently reported neuro oncologic condition accounting for 12% to 30% of all primary intracranial tumors The first case of intracranial meningioma treated with stereotactic radiosurgery was reported by Backlund E O in 1971 Since then more than 200 000 meningiomas have been treated with stereotactic radiosurgery worldwide to date The large number of patients treated using this method is due to the fact that meningiomas are frequently located in critical areas and microsurgery is often associated with severe and permanent neurological complications This book discusses the advantages risks and limits of stereotactic radiosurgery relating to all regions of interest for a neuroradiosurgical approach for the treatment of central nervous system meningiomas Firstly it presents an introduction focusing on the state of the art It then discusses the physics imaging neurological and neuro oncological issues in multidisciplinary management Lastly it features a summary of results including the most recent published papers regarding all the locations involved in the stereotactic radiosurgery treatment as well as new approaches to meningiomas with particular reference to the hypofractionated treatments Intended for anyone involved in the neuroradiosurgical treatment of brain diseases the book provides an up to date overview of the latest stereotactic radiosurgery treatment of central nervous system meningiomas **Tumors of the Central Nervous System, Volume 6** M.A. Hayat, 2012-02-08 This volume contains information on the diagnosis therapy and prognosis of spinal tumors Various aspects of different major types of spinal tumors astrocytomas ependymomas and oligodendroglioma are discussed

Insights into the understanding of molecular pathways involved in tumor biology are explained Classification of intradural spinal tumors including the percentages of each of the three major types is detailed Symptoms radiological features and clinicopathological parameters of spinal cord tumors are explained Diagnosis outcome and prognosis of primary spinal cord and oligodendroglioma are discussed Diagnosis of some other spinal tumors e g pilomyxoid and chordomas is also explained The useful role of neuroimaging in diagnosing spinal teratoid rhabdoid and gangliogliomas is included A wide variety of treatments of a number of spinal cord tumor types are presented in detail Therapies discussed include chemotherapy surgery radiosurgery stereotactic radiosurgery Cyberknife stereotactic radiotherapy standard radiation alone and rhenium 186 intracavity radiation Also are discussed embolization and spondylectomy The usefulness of transplantation of human embryonic stem cells derived oligodendrocyte progenitors and motoneuron progenitors in the repair of injured spinal cord is emphasized Symptoms of the advent of spinal tumors are pointed out Introduction to new technologies and their applications to spinal cord tumor diagnosis treatment and therapy assessment are explained
