Soft Tissue Biomechanical Modeling for Computer Assisted Surgery Yohan Payan, 2012-04-27 This volume focuses on the biomechanical modeling of biological tissues in the context of Computer Assisted Surgery CAS More specifically deformable soft tissues are addressed since they are the subject of the most recent developments in this field The pioneering works on this CAS topic date from the 1980 s with applications in orthopaedics and biomechanical models of bones More recently however biomechanical models of soft tissues have been proposed since most of the human body is made of soft organs that can be deformed by the surgical gesture Such models are much more complicated to handle since the tissues can be subject to large deformations non linear geometrical framework as well as complex stress strain relationships non linear mechanical framework Part 1 of the volume presents biomechanical models that have been developed in a CAS context and used during surgery This is particularly new since most of the soft tissues models already proposed concern Computer Assisted Planning with a pre operative use of the models Then the volume addresses the two key issues raised for an intra operative use of soft tissues models namely Part 2 how to estimate the in vivo mechanical behavior of the tissues i e what are the values of the mechanical parameters that can deliver realistic patient specific behavior and Part 3 how to build a modeling platform that provides generic real time or at least interactive time numerical simulations

Real-time Knowledge-based Fuzzy Logic Model for Soft Tissue Deformation Joey Sing Yee Tan, Amandeep S. Sidhu, 2019-04-06 This book provides a real time and knowledge based fuzzy logic model for soft tissue deformation The demand for surgical simulation continues to grow as there is a major bottleneck in surgical simulation designation and every patient is unique Deformable models the core of surgical simulation play a crucial role in surgical simulation designation Accordingly this book 1 presents an improved mass spring model to simulate soft tissue deformation for surgery simulation 2 ensures the accuracy of simulation by redesigning the underlying Mass Spring Model MSM for liver deformation using three different fuzzy knowledge based approaches to determine the parameters of the MSM 3 demonstrates how data in Central Processing Unit CPU memory can be structured
