Technology Of Food Product Development:

Food Product Development Richard Earle, Allan Anderson, 2001-10-09 Product development from refining an established product range to developing completely new products is the lifeblood of the food industry. It is however a process fraught with risk often ending in failure. What are the keys to making the process a success? Based on a wealth of experience gathered over 40 years, Food Product Development provides the answers. After an introductory chapter, the first half of the book considers the four core elements of product development: the overall business strategy which directs product development, the various steps in the product development process itself, the knowledge required to fuel the process, and last but not least, keeping product development focused on consumer needs and aspirations. The second part of the book looks at managing the product development process in practice with four case studies of successful product launches. It also discusses how to evaluate and improve the process to make future product innovation more successful. Filled with examples and practical suggestions and written by a distinguished team with unrivalled academic and industry expertise, Food Product Development will be an essential guide for R D and product development staff and all managers concerned with this key issue throughout the food industry. Mary D Earle and Richard L Earle are both Professors Emeritus in Massey University, New Zealand. Mary Earle is a pioneer in product development research and both she and her husband have worked with industry on numerous product development projects. Allan M Anderson is Chief Executive of the New Zealand Dairy Research Institute, the central R D organisation for the New Zealand dairy industry and has extensive experience of managing successful product development projects.

New Food Product Development Holger York Toschka, 2025-03-31 With a new subtitle to reflect its global perspective and a new author, this book continues the mission of earlier editions to describe the stages of food development in detail, beginning with sources of ideas and moving through development, final screening, and introduction into the marketplace. Every chapter contains one or more case studies. New chapters address the tools available for the food industry and manufacturers to select, sharpen, fine tune, and support new food product launches. More attention is given to the influence of global concerns about the deteriorating environment and here particularly the role and responsibility of the food industry and those working on new food products.

Key Features: This edition adds the perspective from single product or product range development to the overall portfolio management. This edition explains strategies for successful management of unpredictable, uncertain, and complex conditions in new food product development. NFPD Chapters contain one or more case studies to add pedagogy for students and practical applications for professionals. More focus is given to the role and responsibilities of research and development R D in innovation management. Two chapters are used to predict the future direction for NFPD. This book can serve as the core textbook for the capstone new food product development course typically found in the food science curriculum and is of equal value to early career food scientists finding themselves in a multidisciplinary team working on the creation of a new food product.
