Petrov, Shuwen Dong, 2021 The book provides the results of tectonic geological and geophysical studies of Northern Central and Eastern Asia obtained over the last 20 years and a Tectonic map for this area overview as well as essays on its geodynamic evolution These new results were obtained by an international team of specialists within the project Atlas of geological maps of Central Asia and adjacent areas scale 1:2 500 000 initiated in 2003 by geological surveys of Russia China Mongolia Kazakhstan and South Korea under the auspices of the CGMW The most of the book contains the descriptions of the tectonic structure of major geological regions of Asia such as the Ural Sayan Baikal and Tien Shan orogenic systems The tectonic structure of the Pamirs Turan Plate Mongolia Southern China Korea and other regions is also discussed The book contains maps of gravity and magnetic anomalies sketch maps of deep structures of the area and the geotranssect crossing the most important geological structures of Asia The final chapter of the book describes the tectonic evolution of the Central Asian Orogenic Belt from the Neoproterozoic to the Mesozoic **Tectonic Evolution, Collision, and Seismicity of Southwest Asia** Rasoul Sorkhabi, 2017-12-21 Southwest Asia is one of the most remarkable regions on Earth in terms of active faulting and folding large magnitude earthquakes volcanic landscapes petroliferous foreland basins

historical civilizations as well as geologic outcrops that display the protracted and complex 540 m y stratigraphic record of Earth's Phanerozoic Era. Emerged from the birth and demise of the Paleo Tethys and Neo Tethys oceans, southwest Asia is currently the locus of ongoing tectonic collision between the Eurasia Arabia continental plates. The region is characterized by the high plateaus of Iran and Anatolia fringed by the lofty ranges of Zagros Alborz Caucasus Taurus and Pontic mountains; the region also includes the strategic marine domains of the Persian Gulf, Gulf of Oman, Caspian and Mediterranean. This 19 chapter volume published in honor of Manuel Berberian, a preeminent geologist from the region, brings together a wealth of new data analyses and frontier research on the geologic evolution, collisional tectonics, active deformation and historical and modern seismicity of key areas in southwest Asia.

Paleozoic and Mesozoic tectonic evolution of central and eastern Asia Gregory Arlen Davis, Marc S., 2001. Hendrix geology U of Montana and Davis earth sciences U of Southern California present 19 articles detailing ground based work on the history of assembly and intracontinental deformation of central and eastern Asia. Chapters look at the structural, thermochronologic and sedimentary records of the history of Paleozoic assembly in Mongolia and central and western China. Further information is presented on Mesozoic deformation in orogenic belts of central and eastern Asia. Asia's sedimentary basins are examined and the intracontinental deformation they record is documented. Many of these contributions, particularly the papers examining Mongolian geology, are the first ground based articles written in English. Annotation c. Book News, Inc. Portland, OR: booknews.com.

A Survey of Cenozoic Volcanism on Mainland Asia, 1987 Tectonics of Asia, 1984 **Postcollisional Tectonics and Magmatism in the Mediterranean Region and Asia** Yildirim Dilek, Spyros Pavlides, 2006-01-01. The Mediterranean region and Asia provide a natural laboratory to investigate the driving forces of continental tectonics in an ongoing collisional orogen and the crustal and mantle response to various modes of deformation associated with plate boundary processes. The multidisciplinary research efforts in this region over the last fifteen years have produced a wealth of new data to better understand the interplay and feedback mechanisms between crustal and mantle processes and the dynamic landscape evolution in a complexly deforming area. A number of discrete collisional events between the Gondwana derived continental fragments i.e. Adria, Pelagonia, Arabia, India and Eurasia controlled the geodynamics of the Mediterranean region and Asia during the late Mesozoic and Cenozoic. This book is a collection of research papers presenting new data, interpretations and syntheses on various aspects of the collision induced tectonic, magmatic, metamorphic and geomorphic processes that have affected the evolution of this orogenic belt. It should help us better understand the mode and nature of tectonic and magmatic processes and crustal evolution in active collision zones and the distribution and causes of seismic and volcanic events and their impact on landscape evolution.
