## A Journey into the Essence of Space

Published in 2005, "The Idea of Spatial Form" delves into the fundamental principles governing spatial experiences in architecture. Pallasmaa argues that space is not merely an inert container but an active participant in the human experience, shaping our perceptions and interactions within built environments.

The book explores the intricate relationship between space and human senses, emphasizing the importance of sensory perception in architectural design. Pallasmaa posits that successful architectural compositions engage

## **The Idea Of Spatial Form:**

The Idea of Spatial Form Joseph Frank, 1991 The Idea of Spatial Form contains the classic essay that introduced the concept of spatial form into literary discussion in 1945 and has since been accepted as one of the foundations for a theory of modern literature It is here reprinted along with two later reconsiderations one of which answers its major critics while the second places the theory in relation to Russian Formalism and French Structuralism Originally conceived to clarify the formal experiments of avant garde literature the idea of spatial form when placed in this wider context also contributes importantly to the foundations of a general poetics of the literary text Also included are related discussions of Andr Malraux Heinrich W Ifflin Herbert Read and E H Gombrich New material has been added to the essays in the form of footnotes and postscripts to two of them These either illustrate the continuing relevance of the questions raised or offer Frank's more recent opinions on the topic

The Postmodern Chronotope Paul Smethurst, 2000 The Postmodern Chronotope is an innovative interdisciplinary study of the contemporary It will be of special interest to anyone interested in relations between postmodernism geography and contemporary fiction Some claim that postmodernism questions history and historical bases to culture some say it is about loss of affect loss of depth models and superficiality others claim it follows from the conditions of post industrial society and others cite commodification of place Disneyfication simulation and post tourist spectacle as evidence that postmodernism is wedded to late capitalism Whatever postmodernism is or turns out to have been it is bound up in rethinking and reworking space and time and Paul Smethurst's intervention here is to introduce the postmodern chronotope as a term through which these spatial and temporal shifts might be apprehended The postmodern chronotope constitutes a postmodern world view and postmodern way of seeing In a sense it is the natural successor to a modernist way of seeing defined through cubism montage and relativity The book is arranged as follows Part 1 is an interdisciplinary study casting a wide net across a range of cultural social and scientific activity from chaos theory to cinema from architecture to performance art from IT to tourism Part 2 offers original readings of a selection of postmodern novels including Graham Swift's Waterland and Out of this World Peter Ackroyd's Hawksmoor and First Light Alasdair Gray's Lanark J M Coetzee's Foe Marina Warner's Indigo Caryl Phillips Cambridge and Don DeLillo's The Names and Ratner's Star

**Theory of Urban Space Development** Jin Duan, 2024-08-29 This book is a systematic monograph on urban space development theory exploring the laws of urban space development and the basic principles of planning and design It clarifies the connotation and methods of urban space development research highlights the deep structure and four laws of urban space development expounds the obvious characteristics of urban and regional forms and discusses the interventional role of urban planning and the development mode of Chinese urban space It also discusses the methodological change of modern urban design and forms the principles and core content of China's national spatial planning Guided by the fundamental principles and methods

of development theory this book follows logical progression from concept to method from deep structure to manifest form from macro to micro and from law to planning By providing readers with a comprehensive and systematic urban space development research system this book is a valuable read for both researchers and graduate students in urban studies and architectural design The translation was done with the help of artificial intelligence A subsequent human revision was done primarily in terms of content

**Visualizing Loss in Latin America** Gisela Heffes,2023-05-19 Visualizing Loss in Latin America engages with a varied corpus of textual visual and cultural material with specific intersections with the natural world arguing that Latin American literary and cultural production goes beyond ecocriticism as a theoretical framework of analysis Gisela Heffes poses the following crucial question How do we construct a conceptual theoretical apparatus to address issues of value meaning tradition perspective and language that contributes substantially to environmental thinking and that is part and parcel of Latin America The book draws attention to ecological inequality and establishes a biopolitical ethics based reading of Latin American art film and literature that operates at the intersection of the built environment and urban settings Heffes suggests that the aesthetic praxis that emerges in from Latin America is permeated with a rhetoric of waste a significant trait that overwhelmingly defines it

**Partitioning a Many-Dimensional Containment Space** Dr. Martin Concoyle,2014-01-14 This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes The containment set has many dimensions and these dimensions possess macroscopic geometric properties which are discrete hyperbolic shapes Thus it is a description that transcends the idea of materialism i e it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being the spectral properties of both material systems and of the metric spaces that contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space

**Measures and Meanings of Spatial Capital** Lars Marcus,2025-02-25 How the built environment understood as spatial capital governs both everyday life in cities and urban systems more generally In an age of social and environmental crises we need to critically rethink the role of the built environment and how best to put it to work Measures and Meanings of Spatial Capital presents a new theory of spatial capital arguing that spatial form is essential for building resilience into highly complex urban systems Lars Marcus argues that the built environment constitutes a form of capital that enhances other forms of capital in cities such as social economic and ecological capital if designed with those goals in mind This represents an important and necessary shift in how we approach urban space in the numerous studies of cities that are conducted in a

range of disciplines today such as urban sociology urban economics and urban ecology In contemporary urban studies land has oddly lost its position alongside labor and capital as one of the three fundamental production factors in economic theory but as Marcus shows misconceptions of land are at the root of social and environmental crises worldwide By defining the challenges and modeling our use of spatial form to enhance improve land and then synthesizing data into a unified theory of spatial capital Marcus provides a crucial reframing of how we can best plan and design our cities for the global challenges we are facing

*Space Syntax* Laura Vaughan, John Peponis, Ruth Conroy Dalton, 2025-04-30 Professor Bill Hillier spent most of his career at The Bartlett University College London where he founded and developed with a team of colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology *Space Syntax Selected papers by Bill Hillier* provides a canon of works that reflects the progression of Hillier's ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier's key ideas

*The Mathematical Structure of Stable Physical Systems* Dr. Martin Concoyle & G.P. Coatmundi, 2014 This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes the containment set has many dimensions and these dimensions possess macroscopic geometric properties which are also discrete hyperbolic shapes Thus it is a description which transcends the idea of materialism ie it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being in fact the spectral properties of both material systems and of the metric spaces which contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space Partial differential equations are defined on the many metric spaces of this description but their main function is to act on either the usually unimportant free material components to most often cause non linear dynamics or to perturb the orbits of the quite often condensed material trapped by or within the stable orbits of a very stable hyperbolic metric space shape

***The Routledge Companion to Planning in the Global South*** Gautam Bhan, Smita Srinivas, Vanessa Watson, 2017-09-11 *The Routledge Companion to Planning in the Global South* offers an edited collection on planning in parts of the world which more often than not are unrecognised or unmarked in mainstream planning texts In doing so its intention

is not to fill a gap that leaves this mainstream unquestioned but to re theorise planning from a deep understanding of place as well as a commitment to recognise the diverse modes of practice that come within it The chapters thus take the form not of generalised universal analyses and prescriptions but instead are critical and located reflections in thinking about how to plan act and intervene in highly complex city regional and national contexts Chapter authors in this Companion are not all planners or are planners of very different kinds and this diversity ensures a rich variety of insights primarily based on cases to emphasise the complexity of the world in which planning is expected to happen The book is divided into a framing Introduction followed by five sections planning and the state economy and economic actors new drivers of urban change landscapes of citizenship and planning pedagogy This volume will be of interest to all those wanting to explore the complexities of planning practice and the need for new theories of knowledge from which to draw insight to face the challenges of the 21st century

*The Visual Arts, Pictorialism, and the Novel* Marianna Torgovnick, 2014-07-14 Marianna Torgovnick maintains that it is worthwhile to think about novels in terms of the visual arts in part because major novelists like James Lawrence and Woolf did so and did so fruitfully as they were influenced by their perceptions of artistic movements Originally published in 1985 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
