The Identification Problem In Econometrics:

The Identification Problem in Econometrics Franklin M. Fisher, 1970 Identification Problems in the Social Sciences Charles F. Manski, 1999-03-15 This book provides a language and tools for finding bounds on predictions social and behavioral scientists can logically make from nonexperimental and experimental data Manski draws on criminology demography epidemiology social psychology sociology and economics to illustrate this language and to demonstrate the usefulness of the tools The Identification Problem in Econometrics Walter Rudin, 1966 The identification problem in econometrics Henri Arvon, 1966 **Econometrics** John Eatwell, Murray Milgate, Peter Newman, 1990 First published in the New Palgrave a dictionary of economics in four volumes 1987 T p verso Includes bibliographical references The Formation of Econometrics Duo Qin, 1997 Duo Qin has produced a study of a crucial period in the history of econometrics She analyses the development of the theory and methodology between 1930 and 1960 arguing in particular that the probability revolution of the 1940s was incomplete and resulted in later problems *Identification in Dynamic Shock-Error Models* A. Maravall, 2012-12-06 Looking at a very simple example of an error in variables model I was surprised at the effect that standard dynamic features in the form of autocorrelation in the variables could have on the state of identification of the model It became apparent that identification of error in variables models was less of a problem when some dynamic features were present and that the category of pre determined variables was meaningless since lagged endogenous and truly exogenous variables had very different identification properties Also for the models I was considering both necessary and sufficient conditions for identification could be expressed as simple counting rules trivial to compute These results seemed somewhat striking in the context of traditional econometrics literature and provided the original motivation for this monograph The monograph therefore attempts to analyze econometric identification of models when the variables are measured with error and when dynamic features are present In trying to generalize the examples I was considering although the final results had very simple expressions the process of formally proving them became cumbersome and lengthy in particular for the sufficiency part of the proofs Possibly this was also due to a lack of more high powered analytical tools and or more elegant derivations for which I feel an apology could be appropriate With some minor modifications this monograph is a Ph D dissertation presented to the Department of Economics of the University of Wisconsin Madison Thanks are due to Dennis J Aigner and Arthur S **The Econometrics of Panel Data** László Mátyás, Patrick Sevestre, 2013-12-01 The aim of this volume is to provide a general overview of the econometrics of panel data both from a theoretical and from an applied viewpoint Since the pioneering papers by Kuh 1959 Mundlak 1961 Hoch 1962 and Balestra and Nerlove 1966 the pooling of cross section and time series data has become an increasingly popular way of quantifying economic relationships Each series provides information lacking in the other so a combination of both leads to more accurate and reliable results than would be achievable by one type of series alone Over the last 30 years much work has been done investigation of the properties of the

applied estimators and test statistics analysis of dynamic models and the effects of eventual measurement errors etc These are just some of the problems addressed by this work In addition some specific difficulties associated with the use of panel data such as attrition heterogeneity selectivity bias pseudo panels etc have also been explored The first objective of this book which takes up Parts I and II is to give as complete and up to date a presentation of these theoretical developments as possible Part I is concerned with classical linear models and their extensions Part II deals with nonlinear models and related issues logit and probit models latent variable models incomplete panels and selectivity bias and point processes

Econometrics Badi H. Baltagi, 2007-11-21 Here at last is the fourth edition of the textbook that is required reading for economics students as well as those practising applied economics Not only does it teach some of the basic econometric methods and the underlying assumptions behind them but it also includes a simple and concise treatment of more advanced topics from spatial correlation to time series analysis This book's strength lies in its ability to present complex material in a simple yet rigorous manner This superb fourth edition updates identification and estimation methods in the simultaneous equation model It also reviews the problem of weak instrumental variables as well as updating panel data methods **The Methodology of Economic Model Building (Routledge Revivals)** Lawrence A. Boland, 2014-05-01 The major methodological task for modern economists has been to establish the testability of models Too often however methodological assumptions can make a model virtually impossible to test even under ideal conditions yet few theorists have examined the requirements and problems of assuring testability in economics In *The Methodology of Economic Model Building* first published in 1989 Lawrence Boland presents the results of a research project that spanned more than twenty years He examines how economists have applied the philosophy of Karl Popper relating methodological debates about falsifiability to wider discussions about the truth status of models in natural and social sciences He concludes that model building in economics reflects more the methodological prescriptions of the economist Paul Samuelson than Popper's falsificationism This title will prove invaluable to both students and researchers and represents a substantial contribution to debates about the scientific status of economics The Econometrics of Panel Data László Mátyás, Patrick Sevestre, 2008-04-06 This restructured updated Third Edition provides a general overview of the econometrics of panel data from both theoretical and applied viewpoints Readers discover how econometric tools are used to study organizational and household behaviors as well as other macroeconomic phenomena such as economic growth The book contains sixteen entirely new chapters all other chapters have been revised to account for recent developments With contributions from well known specialists in the field this handbook is a standard reference for all those involved in the use of panel data in econometrics *The Demand and Supply of Outdoor Recreation* Charles J. Cicchetti, 1969 *Economics* Richard G. Lipsey, K. Alec Chrystal, 2015 Written to engage you with real world issues and questions in economics this book provides up to date coverage of the financial crisis and its many subsequent implications which are vital to understanding today's economic climate Case studies help you to

understand how economics works in practice and to think critically Back cover

Agent-Based Models in Economics Domenico Delli Gatti, Giorgio Fagiolo, Mauro Gallegati, Matteo Richiardi, Alberto Russo, 2018-03-22 In contrast to mainstream economics complexity theory conceives the economy as a complex system of heterogeneous interacting agents characterised by limited information and bounded rationality Agent Based Models ABMs are the analytical and computational tools developed by the proponents of this emerging methodology Aimed at students and scholars of contemporary economics this book includes a comprehensive toolkit for agent based computational economics now quickly becoming the new way to study evolving economic systems Leading scholars in the field explain how ABMs can be applied fruitfully to many real world economic examples and represent a great advancement over mainstream approaches The essays discuss the methodological bases of agent based approaches and demonstrate step by step how to build simulate and analyse ABMs and how to validate their outputs empirically using the data They also present a wide set of applications of these models to key economic topics including the business cycle labour markets and economic growth

From Neighborhoods to Nations Yannis Ioannides, 2013 Just as we learn from influence and are influenced by others our social interactions drive economic growth in cities regions and nations determining where households live how children learn and what cities and firms produce From Neighborhoods to Nations synthesizes the recent economics of social interactions for anyone seeking to understand the contributions of this important area Integrating theory and empirics Yannis Ioannides explores theoretical and empirical tools that economists use to investigate social interactions and he shows how a familiarity with these tools is essential for interpreting findings The book makes work in the economics of social interactions accessible to other social scientists including sociologists political scientists and urban planning and policy researchers Focusing on individual and household location decisions in the presence of interactions Ioannides shows how research on cities and neighborhoods can explain communities composition and spatial form as well as changes in productivity industrial specialization urban expansion and national growth The author examines how researchers address the challenge of separating personal social and cultural forces from economic ones Ioannides provides a toolkit for the next generation of inquiry and he argues that quantifying the impact of social interactions in specific contexts is essential for grasping their scope and use in informing policy Revealing how empirical work on social interactions enriches our understanding of cities as engines of innovation and economic growth From Neighborhoods to Nations carries ramifications throughout the social sciences and beyond

On the Estimation of Supply and Demand Elasticities of Agricultural Commodities Santeramo, Fabio Gaetano, This AGRODEP Technical Note provides a literature review on the topic of estimation of demand and supply elasticities To this end it starts the discussion by summarizing the main facets of production theory and consumer theory to introduce the concept of elasticities with examples of different types of elasticities most utilized in the literature Next it discusses the identification problem in estimating elasticities i.e. the issue of having to solve for unique values of the parameters of the structural model from the values of the

parameters of the reduced form of the model It summarizes various methodologies employed in the literature to solve this problem and gives practical examples These solutions include but are not limited to using instrumental variables adopting a recursive structure holding demand constant and imposing inequality constraints in order to restrict the domain of estimates
