## Abstract

In 2008, the State of Utah implemented a 4-day workweek for their employees. This article examines the impact on employees using a postimplementation survey. For employees on the 4-day schedule, there were no significant differences by gender on work–family balance or on the impact of the schedule. However, women did demonstrate slightly more positive attitudes toward the 4-day schedule. Employees with children at home reported lower work–family balance and greater impact of the 4-day schedule. In contrast, no difference in attitudes toward the 4-day schedule was found by age, although work–family balance differed among age groups. There were differences in work–family balance between employees on the 4-day schedule and those on traditional schedules; however, the more substantial factor was whether an employee selected his or her schedule. The current study highlights the importance of engaging employees when making significant organizational changes, such as transitioning from traditional work schedules to alternative schedules.

**Men's Changing Roles in the Family** Robert A Lewis, Marvin B Sussman, 2014-05-01 How are men reacting to perceiving and behaving in light of the changes in gender roles Here is an important volume that provides new and interesting reading about contemporary husbands and fathers Men s Changing Roles in the Family offers

an overview of the causes and consequences of changes in men's family roles in recent decades Experts introduce you to the issues problems and methods on the cutting edge of those disciplines that study men in the context of their families Until now relatively little has been known empirically about men in contemporary families and even less has been known about husbands and fathers from direct reports of the men themselves This groundbreaking volume successfully closes this gap in the literature with an examination of the effects that fathers growing involvement with their children have on their wives and themselves a clinical assessment of some men's angry reactions to separation and divorce and those special therapeutic goals and strategies that may help reduce their distress examinations of the conflicting demands of the work world and the family upon some contemporary husbands and fathers and the negative effects of nonstandard work schedules upon men's family life and an examination of factors that make many men unhappy in patriarchal family structures Men's Changing Roles in the Family also contributes toward breaking new ground by examining family roles now performed by special groups of men Finally this important volume reports empirical findings about men in family like relationships illustrating evidence for the unique roles that male caregivers can offer children in day care centers and reviewing current empirical studies of men's friendships and their development

*Out of Time* Kadri Täht, Melinda Mills, 2015-12-14 This pioneering work aims at understanding the impact of non standard evening night weekend working time on family cohesion meaning parent child interaction partnership quality and divorce or partnership dissolution Out of time the Consequences of Non standard Employment Schedules for Family Cohesion is the first work to treat this important topic in a cross national comparative way by using data from two large comparable surveys The impact of work in non standard schedules on workers can be divided into individual and social consequences Research so far has shown the clear individual effects of these schedules such as increased stress levels and sleeping and physical disorders There is less clarity about social consequences Either no or positive effects of these types of schedules on workers and their families are found or a significant negative impact on the relations between the workers and others especially other members of the family is shown in research results This Brief compares the Netherlands and the United States of America countries that both show a high prevalence of non standard schedule work whereas both operate in very different institutional and welfare regime settings of working time regulation By combining both quantitative and qualitative data the authors are able to provide generalized views of comparative surveys and challenging those generalizations at the same time thus enabling the reader to get a better understanding and more balanced view of the actual relationship between non standard employment schedules and family cohesion

particularly marked such as relocation job insecurity and distinctive behavioural patterns which negatively affect employees' personal lives further. Work life balance has emerged as one of the most pressing management issues in the 21st century. For construction managers dealing with traditional models of work and rigid work schedules the issue may be especially difficult to manage and yet the work life balance is now recognised as an issue of strategic importance to the construction industry. It is critical to the construction industry's continued ability to attract and retain a talented workforce and it is also inextricably linked to organizational effectiveness and employees' well-being. This book presents the argument for the management of work life balance in the construction industry. It maps the changes to the workforce demographic profile and the changing expectations relating to work and personal life that occurred during the second half of the 20th century. Legal imperatives for managing work life balance are set out. It also presents work life balance theory and discusses the practical implications of research along with extensive empirical data collected from the industry. Lastly, practical advice is provided about what construction organizations can and should do to manage work life balance. This provides a unique guide to a key issue.
