and most ambitious work it is the only work in which he attempted to actually deduce scientific knowledge from Cartesian metaphysics as he repeatedly claimed was possible Whatever the success of this attempt there can be no doubt that it was enormously influential Cartesian celestial mechanics held sway for well over a century and some of the best minds of that period including Leibniz Malebranche Euler and the Bernoullis attempted to modify and quantify the Cartesian theory of vortices into an acceptable alternative to Newton s theory of universal gravitation Thus the Principles is not only of inherent and historical interest philosophically but is also a seminal document in the history of science and of 17th Century thought Principles of Philosophy was first published in Latin in 1644 In 1647 a French translation done by the Abbe Claude Picot and containing a great deal of additional material and a number of alterations in the original text was published with Descartes s enthusiastic approval Unlike some English translations of portions of the Principles this translation uses the Latin text as its primary source however a good deal of additional material from Picot s translation has been included There are several reasons for this First there is good evidence that Descartes himself was responsible for some of the additional material including of course the Preface to the French translation

World Design Science Decade: Phase 1 Document 6 R.
Buckminster Fuller, The documents in this series originated with a proposal made by R Buckminster Fuller to the International Union of Architects I U A at their VIIth Congress in London England in July 1961 launching the World Design Science Decade He proposed then that the architectural schools around the world be encouraged by the I U A to invest the next ten years in a continuing problem of how to make the total world s resources which in 1961 serve only 40% serve 100% of humanity through competent design despite a continuing decrease of metal resources per capita In essence The World Design Science Decade series of documents suggests in great detail ways in which world architectural schools and specifically their students should initiate and assume The Design Science Decade The total series includes many of Fuller s most prescient ideas A note from the series editor John McHale Though the language of some of the texts may seem difficult at first approach it should be borne in mind that one of our major problems in thinking today 1965 is the use of language systems which still represent a fixed structurally compartmentalized world view The terms available to us for the expression of dynamic rather than static concepts are far from satisfactory Fuller s language is particularly representative of the transitional state of the western world between the older traditional noun centered culture to its present day changing verb centered culture In his search for an adequately descriptive terminology he tends to employ concepts and usages from many different fields juxtaposed in ways which may be unfamiliar to those more customarily restrained within the vocabularies of particular disciplines Description by the Buckminster Fuller Institute courtesy of The Estate of R Buckminster Fuller The Americana ,1911 *The Americana* Frederick Converse Beach,George Edwin Rines,1912
