Science and Technology of Thin Film Superconductors 2 R.D. McConnell, R. Noufi, 2012-12-06 This conference is the second on the Science and Technology of Thin Film Superconductors It proved to be an excellent forum for these specialists in thin film superconductivity The conference held April 30 May 4 1990 in Denver Colorado hosted 170 researchers from 17 countries The response to the conference again emphasized the need for a meeting devoted to the science and technology of thin film superconductors The breadth of articles and advances made in this technology since the first conference in November 1988 reflect on the maturity of the topic These proceedings contain articles on deposition methods by sputtering electron beam evaporation resistive evaporation laser ablation chemical vapor deposition and electrodeposition and on other studies related to substrates thermodynamics of formation grain boundaries and weak links characterization and some practical applications The program committee was pleased with the quality of the publications and contributed articles This conference was highlighted by a full day dedicated to presentations from the federal laboratories discussing a wide range of topics on the fabrication characterization and theory of high temperature superconductor thin films Other highlights at the conference dealt with 1 critical parameters or problems in measuring critical current density and other important parameters and 2 problems of scale up reproducibility and amenability to device fabrication It became evident from the presentations that three issues were developing into critical issues for the ultimate practical application of high temperature

Multicomponent and Multilayered Thin Films for Advanced Microtechnologies: Techniques, Fundamentals and Devices O. Auciello, Jürgen Engemann, 2012-12-06 The synthesis of multicomponent multilayered superconducting conducting semiconducting and insulating thin films has become the subject of an intensive worldwide interdisciplinary research effort. The development of deposition characterization techniques and the science and technology related to the synthesis of these films are critical for the successful evolution of this interdisciplinary field of research and the implementation of the new materials in a whole new generation of advanced microdevices. This book contains the lectures and contributed papers on various scientific and technological aspects of multicomponent and multilayered thin films presented at a NATO ASI. Compared to other recent books on thin films the distinctive character of this book is the interdisciplinary treatment of the various fields of research related to the different thin film materials mentioned above. The wide range of topics discussed in this book include vacuum deposition techniques synthesis processing characterization and devices of multicomponent multilayered oxide high temperature superconducting ferroelectric electro optic optical metallic silicide and compound semiconductor thin films. The book presents an unusual interdisciplinary exchange of ideas between researchers with cross disciplinary backgrounds and it will be useful to established investigators as well as postdoctoral and graduate students.
