

A MOUNTAIN COMES TO ANAHEIM

In the early months of 1959, a new form slowly emerged on the Orange County horizon. Residents could hardly believe that a mountain was actually "growing" — but there it was... in full view of the busy Santa Ana Freeway: Disneyland's own Matterhorn.

As was the case with many Disneyland attractions, the Matterhorn was born from the script of a Disney motion picture. In this case, the impetus was supplied by the film, "Third Man on the Mountain," which was inspired by Walt's love of Switzerland and his fascination with the legendary mountain.

Soon, Walt was making plans for a speeding bobbed adventure that picked up where the movie left off, a chance for the audience to experience firsthand the icy slopes of a Disneyland Matterhorn.

Numerous photographs of the Swiss peak were carefully studied to create the most accurate replica possible. Scale models led to blueprints, which eventually unfolded into lath, plaster, rebar and cement. The final result is a perfect 1/100th scale re-creation of the famous Swiss peak.

Surface Science The First Thirty Years:

Surface Science Charles B. Duke, 1994 A collection of articles describing the historical developments from 1964-92 of selected topics in surface science This text aims to provide readers with an overview of the field and an indication of future directions
Surface Science K. Oura, V.G. Lifshits, A.A. Saranin, A.V. Zotov, M. Katayama, 2013-03-14 Designed as a textbook for advanced undergraduate and graduate students in engineering and physical sciences who are seeking a general overview of surface science this book also provides the necessary background for researchers just starting out in the field It covers all the most important aspects of modern surface science from the experimental background and crystallographic basics to modern analytical techniques and applications to thin films and nanostructures All topics are presented in a concise and clear form accessible to a beginner At the same time the coverage is comprehensive and at a high technical level with emphasis on the fundamental physical principles Numerous examples references practice exercises and problems complement this remarkably complete treatment which will also serve as an excellent reference for researchers and practitioners

Frontiers in Surface Science and Interface Science C.B. Duke, E. Ward Plummer, 2002-05-21 Any notion that surface science is all about semiconductors and coatings is laid to rest by this encyclopedic publication Bioengineered interfaces in medicine interstellar dust DNA computation conducting polymers the surfaces of atomic nuclei all are brought up to date Frontiers in Surface and Interface Science a milestone publication deserving a wide readership It combines a sweeping expert survey of research today with an educated look into the future It is a future that embraces surface phenomena on scales from the subatomic to the galactic as well as traditional topics like semiconductor design catalysis and surface processing modeling and characterization And great efforts have been made to express sophisticated ideas in an attractive and accessible way Nanotechnology surfaces for DNA computation polymer based electronics soft surfaces interstellar surface chemistry all feature in this comprehensive collection
Assessment of Department of Defense Basic Research National Research Council, Division on Engineering and Physical Sciences, Committee on Department of Defense Basic Research, 2005-01-22 The Department of Defense DOD supports basic research to advance fundamental knowledge in fields important to national defense Over the past six years however several groups have raised concern about whether the nature of DOD funded basic research is changing The concerns include these Funds are being spent for research that does not fall under DOD's definition of basic research reporting requirements have become cumbersome and onerous and basic research is handled differently by the three services To explore these concerns the Congress directed DOD to request a study from the National Research Council NRC about the nature of basic research now being funded by the Department Specifically the NRC was to determine if the programs in the DOD basic research portfolio are consistent with the DOD definition of basic research and with the characteristics associated with fundamental research
Surface Science John Hudson, 2013-10-22 The whole field of surface science is covered in this work Starting with a description of the structure and thermodynamics of

clean surfaces the book goes on to discuss kinetic theory of gases and molecular beam formation This is followed by a large section on gas surface interactions and another major section on energetic particle surface interactions The final chapter provides the background to crystal nucleation and growth The approach adopted is interdisciplinary and slanted towards the experimental side with practical analytical techniques being used to illustrate general principles Templates in Chemistry III Peter Broekmann, Christoph A. Schalley, Karl Heinz Dötz, 2009-01-30 The

first two volumes in this Templates in Chemistry series have focused on templates that control solution phase reactions Among the templates discussed in these two volumes were convex and concave templates that mediate the formation of macrocyclic molecules and mechanically bound molecules with their intriguing intertwined topology Also three dimensional templates that are used to imprint polymers and that organize compounds in the solid state for predestined reactions have been included in the earlier volumes In the present volume we extend the template topology to surfaces that act as matrices for the controlled growth of two dimensional arrays Naturally the typical methods for the characterization of surfaces such as scanning probe microscopy are prominently represented in this volume

Different lateral interactions such as coordinative bonds or hydrogen bonding play a major role in assembling the 2D networks on surfaces in addition to the interaction of the samples with the underlying substrates Many phenomena that are also encountered in solution can be directly visualized on surfaces Reversible self assembly processes lead to the formation of large structures through multiple recognition of small building blocks and culminate in the engineering of crystals in two dimensions Self sorting processes drive the formation of highly ordered arrays through the geometric fit of the available components Either the surface itself is the template for example when clusters grow on metal oxide films or colloidal templates control the formation of macroporous networks on the substrate This volume highlights a selection of actual complementary aspects of surface templates We believe that the scope and the variety of topics covered in this volume will attract readers from different communities such as supramolecular chemistry materials sciences surface chemistry

surface physics and surface technology and we hope they will enjoy this new volume on Templates in Chemistry **Introduction to**

Surface and Thin Film Processes John Venables, 2000-08-31 This book covers the experimental and theoretical understanding of surface and thin film processes It presents a unique description of surface processes in adsorption and crystal growth including bonding in metals and semiconductors Emphasis is placed on the strong link between science and technology in the description of and research for new devices based on thin film and surface science Practical experimental design sample preparation and analytical techniques are covered including detailed discussions of Auger electron spectroscopy and microscopy Thermodynamic and kinetic models of structure are emphasised throughout The book provides extensive leads into practical and research literature as well as resources on the World Wide Web see <http://venables.asu.edu> book Each chapter contains problems which aim to develop awareness of the subject and the methods used Aimed as a

graduate textbook this book will also be useful as a sourcebook for graduate students researchers and practitioners in physics chemistry materials science and engineering

Quantum Theory of Real Materials James R. Chelikowsky, Steven G. Louie, 1996-02-29 A Festschrift in honor of Professor Marvin L Cohen This volume is a Festschrift in honor of Professor Marvin L Cohen The articles contributed by leading researchers in condensed matter physics high light recent advances in the use of quantum theory to explain and predict properties of real materials The invention of quantum mechanics in the 1920 s provided detailed descriptions of the electronic structure of atoms However a similar understanding of solids has been achieved only in the past 30 years owing to the complex electron ion and electron electron interactions in these systems Professor Cohen is a central figure in this achievement His development of the pseudopotential and total energy methods provided an alternate route using computers for the exploration of solids and new materials even when they have not yet been synthesized Professor Cohen s contributions to materials theory have been both fundamental and encompassing The corpus of his work consists of over 500 papers and a textbook His band structures for semiconductors are used worldwide by researchers in solid state physics and chemistry and by device engineers Professor Cohen s own use of his theories has resulted in the determination of the electronic structure optical properties structural and vibrational properties and superconducting properties of numerous condensed matter systems including semiconductors metals surfaces interfaces defects in solids clusters and novel materials such as the fullerenes and nanotubes

The Surface Science of Metal Oxides, 2000 The surface science of metal oxides is studied using a variety of experimental and theoretical techniques allowing the geometry electronic structure dynamics and the behaviour of the metal oxide metal interface to be explored Faraday Discussions documents a long established series of Faraday Discussion meetings which provide a unique international forum for the exchange of views and newly acquired results in developing areas of physical chemistry biophysical chemistry and chemical physics The papers presented are published in the Faraday Discussion volume together with a record of the discussion contributions made at the meeting Faraday Discussions therefore provide an important record of current international knowledge and views in the field concerned
