DONALD M. MACKAY

The universe "is like a rare clock . . . where all things are so skilfully contrived that the engine being once set moving all things proceed according to the artificer's design."

Robert Boyle (1627-1692)

The Clockwork Image Donald MacCrimmon MacKay,1974 **The Clock Work Image** Donald MacCrimmon MacKay,1974 **Global Perspectives on Science and Christianity** Mike Brownutt,Keith R. Fox,2024-09-30 The discussion of how science and Christianity relate to each other is a truly global one Christianity around the world encompasses diverse sets of perspectives ideas and challenges Similarly the practice and perception of science can vary significantly from one region to another When brought together in their global contexts we find a richness in the engagement between science and Christianity that leads to diverse questions and distinctive answers Global Perspectives on Science and Christianity brings together scholars from six continents hailing from disciplines of natural and social sciences theology history and philosophy to provide a unique collection of perspectives on how science and Christianity relate around the world Tackling some issues that are seldom addressed as well as providing fresh perspectives on perennial topics this is an important relevant and genuinely global contribution to the discussion

Being Truly Human David W. Gooding,John C. Lennox,2018-07-06 We need a coherent picture of our world Life s realities won t let us ignore its fundamental questions but with so many opposing views how will we choose answers that are reliable In this series of books David Gooding and John Lennox offer a fair analysis of religious and philosophical attempts to find the truth about the world and our place in it By listening to the Bible alongside other leading voices they show that it is not only answering life s biggest questions it is asking better questions than we ever thought to ask In Book 1 *Being Truly Human* Gooding and Lennox address issues surrounding the value of humans They consider the nature and basis of morality compare what morality means in different systems and assess the dangerous way freedom is often devalued What should guide our use of power What should limit our choices And to what extent can our choices keep us from fulfilling our potential

Science & Its Limits Del Ratzsch,2000-01-12 Now updated to reflect current discussions of intelligent design and postmodern views of science this book by Del Ratzsch offers readers a thoughtful perspective on current trends and useful advice on how to approach faith and science issues *Explorations in Neuroscience, Psychology and Religion* Kevin S. Seybold,2016-04-15 In the 1990s great strides were taken in clarifying how the brain is involved in behaviors that in the past had seldom been studied by neuroscientists or psychologists This book explores the progress begun during that momentous decade in understanding why we behave think and feel the way we do especially in those areas that interface with religion What is happening in the brain when we have a religious experience Is the soul a product of the mind which is in turn a product of the brain If so what are the implications for the Christian belief in an afterlife If God created humans for the purpose of having a relationship with him should we expect to find that our spirituality is a biologically evolved human trait What effect might a disease such as Alzheimer s have on a person s spirituality and relationship with God Neuroscience and psychology are providing information relevant to each of these questions and many Christians are worried that their religious

beliefs are being threatened by this research Kevin Seybold attempts to put their concerns to rest by presenting some of the scientific findings coming from these disciplines in a way that is understandable yet non threatening to Christian belief

Neuromatic John Lardas Modern,2021-09-29 The story Modern tells ranges from eighteenth century brain anatomies to the MRI from the spread of phrenological cabinets and mental pieties in the nineteenth century to the discovery of the motor cortex and the emergence of the brain wave as a measurable manifestation of cognition from cybernetic research into neural networks and artificial intelligence to the founding of brain centric religious organizations such as Scientology from the deployments of cognitive paradigms in electric shock treatment to the work of Barbara Brown a neurofeedback pioneer who promoted the practice of controlling one s own brainwaves in the 1970s What Modern reveals via this grand tour is that our ostensibly secular turn to the brain is bound up at every turn with the religion it discounts ignores or actively dismisses Nowhere are science and religion closer than when they try to exclude each other at their own peril *Intelligent Design*

Creationism and Its Critics Robert T. Pennock,2001-12-21 The last decade saw the arrival of a new player in the creation evolution debate the intelligent design creationism IDC movement whose strategy is to act as the wedge to overturn Darwinism and scientific naturalism This anthology of writings by prominent creationists and their critics focuses on what is novel about the new movement It serves as a companion to Robert Pennock s Tower of Babel in which he criticizes the wedge movement as well as other new varieties of creationism The book contains articles previously published in specialized hard to find journals as well as new contributions Each section contains introductory background information articles by influential creationists and their critics and in some cases responses by the creationists The discussions cover IDC as a political movement IDC s philosophical attack on evolution the theological debate over the apparent conflict between evolution and the Bible IDC s scientific claims and philosopher Alvin Plantinga s critique of naturalism and evolution The book concludes with Pennock s Why Creationism Should Not Be Taught in the Public Schools **Computing the Mind** Shimon

Edelman,2008-09-08 In a culmination of humanity s millennia long quest for self knowledge the sciences of the mind are now in a position to offer concrete empirically validated answers to the most fundamental questions about human nature What does it mean to be a mind How is the mind related to the brain How are minds shaped by their embodiment and environment What are the principles behind cognitive functions such as perception memory language thought and consciousness By analyzing the tasks facing any sentient being that is subject to stimulation and a pressure to act Shimon Edelman identifies computation as the common denominator in the emerging answers to all these questions Any system composed of elements that exchange signals with each other and occasionally with the rest of the world can be said to be engaged in computation A brain composed of neurons is one example of a system that computes and the computations that the neurons collectively carry out constitute the brain s mind Edelman presents a computational account of the entire spectrum of cognitive phenomena that constitutes the mind He begins with sentience and uses examples from visual perception to demonstrate

that it must at its very core be a type of computation Throughout his account Edelman acknowledges the human mind's biological origins Along the way he also demystifies traits such as creativity language and individual and collective consciousness and hints at how naturally evolved minds can transcend some of their limitations by moving to computational substrates other than brains The account that Edelman gives in this book is accessible yet unified and rigorous and the big picture he presents is supported by evidence ranging from neurobiology to computer science The book should be read by anyone seeking a comprehensive and current introduction to cognitive psychology
