Playing the Scientist Game

It has often been assumed that the central aim of science education is to teach children as much as possible about what scientists have learnt. A similar view could be taken in design and technology where the subject would then be limited to teaching children about the products of influential schools of design, and about particular techniques and technologies. While all of these certainly have a place in science and design and technology education it is now widely agreed that the central focus of both subjects should be on the development of practical capability. Children should therefore be systematically introduced to the 'crafts skills' (Polanyi, 1958) of the scientist and those of the design technologist.

Children should therefore be introduced to these particular ways of working and particular ways of thinking and apply them to their own investigations and problems at an early stage. Just as portrait or landscape painters need to learn techniques and technicalities to practice their art effectively, and just as they will benefit from studying the paintings of others, so the scientist and the design technologist gain from similarly focused tuition in their own fields. The point is that these focused activities are not the ends in themselves, they are merely the means by which children are given their first appreciation and are later more formally introduced to each of these 'craft' communities.

As Robin Millar (1989) has suggested:

"In teaching children science, we are helping them to internalise the procedures and standards of the scientific community. We are assisting the child to construct for herself a mental representation of the scientific ways of working and judging". (p60)

Millar cites Lawrence Stenhouse (1978) to argue for a model of teaching in which:

"the teacher guides the learner towards an appreciation of the standards of judgment inherent in a discipline, through a process of day-to-day correction and critical comment on the learner's work". (op cit)

The most important personal skill for a scientist is the skill of reasoning. Or more accurately it is the skill of identifying mistaken reasoning. We can all reason incorrectly easily enough. Aristotle thought that a heavier object would fall to the ground faster than a light one. It won't, but the fact that he got it wrong doesn't mean that he was stupid, far from it. Aristotle would have been quick to correct himself if he had carried out a systematic study. Galileo is often credited as being the first to make the necessary measurements, but it is important to recognise that that was all that it took. Galileo may or may not have been the first to make the measurements, but his spectacular demonstration on the leaning tower of Pisa certainly popularised the idea. It made history! But let's take a more mundane example from a school PE lesson involving four and five year olds:

To the tune of 'The Sorcerers Apprentice' the group of infants were jumping, feet together, around the school hall imitating 'magical brushes' that were sweeping away the water. As the children began to tire one child, Sarah, suddenly exclaimed; "Its not fair Brahmajit can jump higher because he has longer legs!" The teacher stopped the class and repeated what

Supporting Science, Design and Technology in the Early Years N/A Siraj-Blatchford, Iain MacLeod-Brudenell, 1999-08-16
How do young children learn science design and technology How can we support young children and help them to develop scientific design and technology skills This practical and accessible text answers these questions and provides guidance for adults working with young children in a variety of formal and informal settings Concrete advice is given to show how parents carers teachers and other professionals can provide a rich learning environment and support children in this important area of the curriculum The differing needs of both adults and children are recognized and a variety of stimulating activities is illustrated A clear and helpful discussion of a developmental framework enables readers to strengthen their own practice and understanding The book will be of value to all early childhood professionals as well as being of great interest to parents and carers *Supporting Science, Design And Technology In The Early Years* Siraj-Blatchford,, MacLeod-Brudenell, Iain, 1999-08-01 This practical text seeks to answer such questions as how young children learn science design and technology and how they can be supported to develop these skills It gives advice on providing a learning environment and recognising needs **Teaching Science and Technology in the Early Years (3-7)** Dan Davies, Alan Howe, Christopher Collier, Rebecca Digby, Sarah Earle, Kendra McMahon, 2019-04-30 Teaching Science and Technology in the Early Years 3 7 celebrates young children s amazing capabilities as scientists designers and technologists Research based yet practical and accessible it demonstrates how scientific designing and making activities are natural to young children and have the potential for contributing to all aspects of their learning By identifying the scientific and technological concepts skills and activities being developed the book enables the reader to make more focused diagnostic observations of young children and plan for how they can help move them forward in their learning This third edition has been thoroughly updated and features fresh insights into young children s learning from neuroscience and new materialist perspectives a UK wide perspective on Early Years curricula and how they support the inclusion of science and technology as an entitlement for young children new case studies of successful evidence based Early Years practice alongside new examples of practical planning for learning and advice on documenting children s learning stories an updated chapter on assessing and documenting children s learning drawing upon findings from the Teacher Assessment in Primary Science TAPS project at Bath Spa University Based on the latest research and first hand experience this practical and accessible book is essential reading for Early Years and Primary students on undergraduate PGCE and Masters level courses *Supporting Science and Technology (1998)* Ann Montague-Smith, Lorna Winstone, 2018-02-19 Published in 1998 The Desirable Outcomes for pre fives and the National Curriculum for Key Stage 1 set out the requirements for learning from nursery through to the end of Key Stage 1 in both science and technology This book will increase the confidence of the classroom assistants by offering suggestions for improving their subject knowledge in line with these requirements and advice on how to support the teacher and the child

through appropriate learning activities The handbook will also benefit headteachers and teachers in early years settings who are training volunteers or classroom assistants perhaps taking STA BTEC or NNEB courses

Knowledge and Understanding of the World Richard Woolley, Jane Johnston, Emily Rotchell, 2011-01-13 International Handbook of Primary Technology Education Clare Benson, Julie Lunt, 2011-11-16 This international handbook offers an in depth study of the development of primary Technology or Design and Technology education worldwide It is unique in that it focuses on the way in which the building blocks for this subject have been established providing much needed research and information for those involved with secondary education and beyond to draw on The inclusion of Technology education into primary curricula has gathered momentum for the last two decades as its importance and relevance to children s lives has been realised by educators This handbook offers a detailed insight into the many and varied ways in which countries have incorporated the subject into children s primary school experiences and issues that have arisen during its implementation The authors all work in the field of primary technology education and have been actively involved in curriculum development and research in their own countries The first part of the book is devoted to the introduction the development and implementation of Technology education into the primary curricula of countries worldwide Reasons for this movement successes and barriers to development are discussed and speculation about the future of Technology education is reflected upon The second part of the book relates to issues that have arisen as the subject has grown over the last twenty years and consideration needs to be given to these if future successes are to be achieved Classroom practice including designing and ICT teacher education enterprise sustainability and indigenous technology are all reflected upon and support the notion of technology as a valued and valuable part of the primary curriculum This book should be of interest to undergraduate and graduate students practitioners researchers curriculum developers policy makers and professional development providers who are involved with and have an interest in primary technology education worldwide

The Professional Knowledge Base of Science Teaching Deborah Corrigan, Justin Dillon, Richard Gunstone, 2011-03-01 Over the past twenty years much has been written about the knowledge bases thought necessary to teach science Shulman has outlined seven knowledge domains needed for teaching and others such as Tamir have proposed somewhat similar domains of knowledge specifically for science teachers Aspects of this knowledge have changed because of shifts in curriculum thinking and the current trends in science education have seen a sharp increase in the significance of the knowledge bases The development of a standards based approach to the quality of science teaching has become common in the Western world and phrases such as evidence based practice have been tossed around in the attempt to measure such quality The Professional Knowledge Base of Science Teaching explores the knowledge bases considered necessary for science teaching It brings together a number of researchers who have worked with science teachers and they address what constitutes evidence of high quality science teaching on what basis such evidence can be judged and how such evidence reflects the knowledge basis of the modern day professional science teacher

This is the second book produced from the Monash University King s College London International Centre for the Study of Science and Mathematics Curriculum The first book presented a big picture of what science education might be like if values once again become central while this book explores what classroom practices may look like based on such a big picture
