The Code Of The City Standards And The Hidden Language Of Place Making:

The Code of the City Eran Ben-Joseph, 2005 Traces the evolution of urban development codes and standards examines their effect on city planning and design and proposes alternatives that will encourage innovation **Place-making and Urban Development** Pier Carlo Palermo, Davide Ponzini, 2014-12-05 The regeneration of critical urban areas through the redesign of public space with the intense involvement of local communities seems to be the central focus of place making according to some widespread practices in academic and professional circles Recently new expertise maintains that place making could be an innovative and potentially autonomous field competing with more traditional disciplines like urban planning urban design architecture and others This book affirms that the question of making better places for people should be understood in a broader sense as a symptom of the non contingent limitations of the urban and spatial disciplines It maintains that research should not be oriented only towards new technical or merely formal solutions but rather towards the profound rethinking of disciplinary paradigms In the fields of urban planning urban design and policy making the challenge of place making provides scholars and practitioners a great opportunity for a much needed critical review Only the substantial reappraisal of long standing technical cultural institutional and social premises and perspectives can truly improve place making practices The pressing need for place making implies trespassing undue disciplinary boundaries and experimenting a place based approach that can innovate and integrate planning regulations strategic spatial visioning and urban development projects Moreover the place making challenge compels urban experts and policy makers to critically reflect upon the physical and social contexts of their interventions In this sense facing place making today is a way to renew the civic and social role of urban planning and urban design The Making of Grand Paris Theresa Enright, 2023-09-19 A critical examination of metropolitan planning in Paris the Grand Paris initiative and the building of today's networked global city In 2007 the French government announced the Grand Paris initiative This ambitious project reimaged the Paris region as integrated balanced global sustainable and prosperous Metropolitan solidarity would unite divided populations a new transportation system the Grand Paris Express would connect the affluent city proper with the low income suburbs streamlined institutions would replace fragmented governance structures Grand Paris is more than a redevelopment plan it is a new paradigm for urbanism In this first English language examination of Grand Paris Theresa Enright offers a critical analysis of the early stages of the project considering whether it can achieve its twin goals of economic competitiveness and equality Enright argues that by orienting the city around growth and marketization Grand Paris reproduces the social and spatial hierarchies it sets out to address For example large expenditures for the Grand Paris Express are made not for the public good but to increase the attractiveness of the region to private investors setting off a real estate boom encouraging gentrification and leaving many residents still unable to get from here to there Enright describes Grand Paris as an example of what she calls grand urbanism large scale planning that relies on infrastructural megaprojects to reconfigure urban

regions in pursuit of speculative redevelopment Democracy and equality suffer under processes of grand urbanism Given the logic of commodification on which Grand Paris is based these are likely to suffer as the project moves forward

Cryptographic City Richard Coyne,2023-05-16 Cryptography s essential role in the functioning of the city viewed against the backdrop of modern digital life Cryptography is not new to the city in fact it is essential to its functioning For as long as cities have existed communications have circulated often in full sight but with their messages hidden In Cryptographic City Richard Coyne explains how cryptography runs deep within the structure of the city He shows the extent to which cities are built on secrets their foundations now reinforced by digital encryption and cryptocurrency platforms He also uses cryptography as a lens through which to inspect smart cities and what they deliver Coyne sets his investigation into the cryptographic city against the backdrop of the technologies claims and challenges of the smart city Cryptography provides the means by which communications within and between citizens and devices are kept secure Coyne shows how all of the smart city innovations from smart toasters to public transportation networks are enabled by secure financial transactions data flows media streaming and communications made possible by encryption Without encryption he says communications between people and digital devices would be exposed for anyone to see hack and misdirect He explains the relevant technicalities of cryptography and describes the practical difference it makes to frame cities as cryptographic Interwoven throughout the book are autobiographical anecdotes insights from Coyne s teaching practice and historical reports making it accessible to the general reader

A Just Transition for All J. Mijin Cha,2024-12-03 Why the energy transition must be more than a fuel source replacement and how we can seize the opportunity of the transition to build a more just future for all To meet the greenhouse gas emissions reductions needed to stave off the worst impacts of climate change a transition away from fossil fuels must occur as quickly as possible But there are many unknowns when it comes to moving from theory to implementation for such a large scale energy transition not least regarding the social impact In *A Just Transition for All* J Mijin Cha a seasoned climate policy researcher who also works with advocacy organizations and unions offers a comprehensive analysis of how we can enact transformational changes that meaningfully improve people s lives Cha provides a novel governance framework called the Four Pillars formulated from original research to provide a way to move from theory to practice The Pillars framework includes a novel analysis that guides readers in understanding how to formulate effective just transition policies what makes them just or unjust and similarly what makes transition just and unjust The framework also combines theoretical discussions with original empirical research and provides insights into perceptions of just transition Grounded in real world perspectives that make the case for policies that advance the interests of all not just of fossil fuel workers Cha charts the path forward to an equitable and sustainable future that no longer depends on fossil fuels

Bridging Silos Katrina Smith Korfmacher,2019-08-27 How communities can collaborate across systems and sectors to address environmental health disparities with case studies from Rochester New York Duluth Minnesota and

Southern California Low income and marginalized urban communities often suffer disproportionate exposure to environmental hazards leaving residents vulnerable to associated health problems Community groups academics environmental justice advocates government agencies and others have worked to address these issues building coalitions at the local level to change the policies and systems that create environmental health inequities In *Bridging Silos* Katrina Smith Korfmacher examines ways that communities can collaborate across systems and sectors to address environmental health disparities with in depth studies of three efforts to address long standing environmental health issues childhood lead poisoning in Rochester New York unhealthy built environments in Duluth Minnesota and pollution related to commercial ports and international trade in Southern California All three efforts were locally initiated driven by local stakeholders and each addressed issues long known to the community by reframing an old problem in a new way These local efforts leveraged resources to impact community change by focusing on inequities in environmental health bringing diverse kinds of knowledge to bear and forging new connections among existing community academic and government groups Korfmacher explains how the once integrated environmental and public health management systems had become separated into self contained silos and compares current efforts to bridge these separations to the development of ecosystem management in the 1990s Community groups government agencies academic institutions and private institutions each have a role to play but collaborating effectively requires stakeholders to appreciate their partners diverse incentives capacities and constraints

Global Cities Robert Gottlieb, Simon Ng, 2018-08-28 How Los Angeles Hong Kong and China deal with such urban environmental issues as ports goods movement air pollution water quality transportation and public space Over the past four decades Los Angeles Hong Kong and key urban regions of China have emerged as global cities in financial political cultural environmental and demographic terms In this book Robert Gottlieb and Simon Ng trace the global emergence of these urban areas and compare their responses to a set of six urban environmental issues These cities have different patterns of development Los Angeles has been the quintessential horizontal city the capital of sprawl Hong Kong is dense and vertical China s new megacities in the Pearl River Delta created by an explosion in industrial development and a vast migration from rural to urban areas combine the vertical and the horizontal All three have experienced major environmental changes in a relatively short period of time Gottlieb and Ng document how each has dealt with challenges posed by ports and the movement of goods air pollution Los Angeles Hong Kong and urban China are all notorious for their hazardous air quality water supply all three places are dependent on massive transfers of water and water quality the food system from seed to table transportation and public and private space Finally they discuss the possibility of change brought about by policy initiatives and social movements

Flint Fights Back Benjamin J. Pauli, 2019-05-07 An account of the Flint water crisis shows that Flint s struggle for safe and affordable water is part of a broader struggle for democracy When Flint Michigan changed its source of municipal water from Lake Huron to the Flint River Flint residents were repeatedly assured that the

water was of the highest quality At the switchover ceremony the mayor and other officials performed a celebratory toast declaring Here s to Flint and downing glasses of freshly treated water But as we now know the water coming out of residents taps harbored a variety of contaminants including high levels of lead In Flint Fights Back Benjamin Pauli examines the water crisis and the political activism that it inspired arguing that Flint s struggle for safe and affordable water was part of a broader struggle for democracy Pauli connects Flint s water activism with the ongoing movement protesting the state of Michigan s policy of replacing elected officials in financially troubled cities like Flint and Detroit with appointed emergency managers Pauli distinguishes the political narrative of the water crisis from the historical and technical narratives showing that Flint activists emphasis on democracy helped them to overcome some of the limitations of standard environmental justice frameworks He discusses the pro democracy anti emergency manager movement and traces the rise of the water warriors describes the uncompromising activist culture that developed out of the experience of being dismissed and disparaged by officials and examines the interplay of activism and scientific expertise Finally he explores efforts by activists to expand the struggle for water justice and to organize newly mobilized residents into a movement for a radically democratic Flint

Changing Lanes Joseph F.C. Dimento,Cliff Ellis,2014-08-29 The story of the evolution of the urban freeway the competing visions that informed it and the emerging alternatives for more sustainable urban transportation Urban freeways often cut through the heart of a city destroying neighborhoods displacing residents and reconfiguring street maps These massive infrastructure projects costing billions of dollars in transportation funds have been shaped for the last half century by the ideas of highway engineers urban planners landscape architects and architects with highway engineers playing the leading role In *Changing Lanes* Joseph DiMento and Cliff Ellis describe the evolution of the urban freeway in the United States from its rural parkway precursors through the construction of the interstate highway system to emerging alternatives for more sustainable urban transportation DiMento and Ellis describe controversies that arose over urban freeway construction focusing on three cases Syracuse which early on embraced freeways through its center Los Angeles which rejected some routes and then built I 105 the most expensive urban road of its time and Memphis which blocked the construction of I 40 through its core Finally they consider the emerging urban highway removal movement and other innovative efforts by cities to re envision urban transportation

Hybrid Nature Daniel Schneider,2011 A history of of the industrial ecosystem that focuses on the biological sewage treatment plant as an early example Biological sewage treatment like electricity power generation telephones and mass transit has been a key technology and a major part of the urban infrastructure since the late nineteenth century But sewage treatment plants are not only a ubiquitous component of the modern city they are also ecosystems a hybrid variety that incorporates elements of both nature and industry and embodies multiple contradictions In *Hybrid Nature* Daniel Schneider offers an environmental history of the biological sewage treatment plant in the United States and England viewing it as an early and influential example of an industrial ecosystem

The sewage treatment plant relies on microorganisms and other plants and animals but differs from a natural ecosystem in the extent of human intervention in its creation and management. Schneider explores the relationship between society and nature in the industrial ecosystem and the contradictions that define it: the naturalization of industry versus the industrialization of nature, the public interest versus private patented technology, engineers versus bacterial and human labor, and purification versus profits in the marketing of sewage fertilizer. Schneider also describes biotechnology's direct connections to the history of sewage treatment and how genetic engineering is extending the reaches of the industrial ecosystem to such natural ecosystems as oceans, rivers, and forests. In a conclusion that shows how industrial ecosystems continue to evolve, Schneider discusses John Todd's Living Machine, a natural purification method of sewage treatment as the embodiment of the contradictions of the industrial ecosystem.
