Indoor Air Quality, 1998 **Indoor Air Quality Assessment for Smart Environments** Jagriti

Saini, Maitreyee Dutta, Gonçalo Marques, Malka N. Halgamuge, 2022-05-15. Indoor air quality (IAQ) and indoor air pollution (IAP) are a matter of concern in many countries because they can significantly influence the general health and well-being of those who spend most of their time inside, whether at home or work. Poor IAQ and repeated exposure to dangerous concentrations of pollutants can contribute significantly to the healthcare burden along with increased absenteeism and lost productivity worldwide. This book, *Indoor Air Quality Assessment for Smart Environments*, explores the problem of IAQ and highlights potential challenges, gaps, and opportunities in the field. As the title suggests, it focuses on assessing IAQ in smart environments using emerging technologies such as the Internet of Things (IoT) and Wireless Sensor Networks (WSN) that can further contribute to the development of intelligent building management systems. The book contains 8 chapters written by various experts in the field, addressing significant elements of IAQ management, including definition, state of the art, and applications, sensing techniques, technological interventions, and smart environments, smart monitoring devices, green and smart hospitals, health risks of nano building products, the optimization of household ventilation, and an assessment of smart environments. While providing a useful source of knowledge for researchers, policymakers, public health professionals, and government agencies wishing to enhance the air quality in buildings, the book will also serve as a guide to building occupants who wish to take the necessary measures to enhance the built environment with improved ventilation arrangements.
