European Dept.,2016-02-11 This paper aims to contribute to the discussion by sketching ways in which the taxation equity efficiency frontier could be shifted outward in the Netherlands In a nutshell we argue that significant efficiency gains could be achieved by shifting the tax burden away from labor and toward consumption and capital especially housing The detrimental impact of the tax benefit system on labor supply in particular by mothers and the insufficient and distortionary use of the value added tax VAT as a revenue collection mechanism is also highlighted in the paper This paper also reviews the main features of the Dutch tax system and sketches the contours of a hypothetical tax reform **Your Federal Income Tax for Individuals** United States. treaties the other income article in other model conventions and notable deviations from Article 21 among bilateral tax treaties An appendix offers well grounded recommendations on how to potentially amend the wording of Article 21 and the related commentary and how the application of the article can be improved Although underexposed in the tax law literature heretofore the other income article raises important international taxation issues that remain problematic or unresolved Tax lawyers government officials and other interested professionals will find here a penetrating analysis that goes a long way towards clarifying the characterisation of income that resists the standard categories defined in tax treaties

Children and Pensions Alessandro Cigno, Martin Werding, 2007 An analysis of the effect of public pension schemes on a country's fertility rate and a proposal for policies to reform pension coverage in light of this The rapidly aging populations of many developed countries most notably Japan and member countries of the European Union present obvious problems for the public pension plans of these countries Not only will there be disproportionately fewer workers making pension contributions than there are retirees drawing pension benefits but the youth to age imbalance would significantly affect the total contributive capacity of future generations and hence their total income growth In *Children and Pensions* Alessandro Cigno and Martin Werding examine the way pension policy and child related benefits affect fertility behavior and productivity growth They present theoretical arguments to the effect that public pension coverage as such will reduce aggregate fertility and may raise aggregate household savings They argue further that public pensions as they are currently designed discourage parents from private human capital investment in their children to improve the children's future earning capacity After an overview of pension and child benefit policies focusing on the European Union Japan and the United States the authors offer an empirical and theoretical analysis and a simulation of the effects of the policies under discussion Their policy proposals to address declines in fertility and productivity growth include the innovative suggestion that relates a person's pension entitlements to his or her number of children and the children's earning ability proposing that in effect a person's pension could be financed in part or in full by the pensioner's own children
