A Developmental-functionalist Approach To Child Language Nancy Budwig, 2013-04-15 Although there has been much empirical study within what has been referred to as functional approaches to child language there has yet to be a major attempt to compare and contrast such proposals In addition much of the work carried out within child language from a functionalist perspective has not been specific with regard to the nature of the approach adopted In attempting to fill the gap the author of this book begins with a comparison of various functionalist approaches By concentrating on one domain agentivity and control Budwig develops a set of research questions based on an examination of findings stemming from linguistics psycholinguistics and developmental psychology and also provides an in depth discussion of related methodological issues In the second part of the book she traces the development of linguistic means to refer to oneself within a developmental functionalist perspective Individual case studies as well as group analyses of six children in the early phases of acquiring English grammar are provided In the last part Budwig examines the relationship between forms and functions in development with special attention to potential generalizations about the organization and reorganization of the children's linguistic systems

White,Catherine A. Lutz,1992 The field of psychological anthropology has changed a great deal since the 1940s and 1950s when it was often known as Culture and Personality Studies Rooted in psychoanalytic psychology its early practitioners sought to extend that psychology through the study of cross cultural variation in personality and child rearing practices Psychological anthropology has since developed in a number of new directions Tensions between individual experience and collective meanings remain as central to the field as they were fifty years ago but alongside fresh versions of the psychoanalytic approach other approaches to the study of cognition emotion the body and the very nature of subjectivity have been introduced And in the place of an earlier tendency to treat a culture as an undifferentiated whole psychological anthropology now recognizes the complex internal structure of cultures The contributors to this state of the art collection are all leading figures in contemporary psychological anthropology and they write about recent developments in the field Sections of the book discuss cognition developmental psychology biology psychiatry and psychoanalysis areas that have always been integral to psychological anthropology but which are now being transformed by new perspectives on the body meaning agency and communicative practice Words and the Mind Barbara Malt,Phillip Wolff,2010-03 The study of word meanings promises important insights into the nature of the human

mind by revealing what people find to be most cognitively significant in their experience. However, as we learn more about the semantics of various languages, we are faced with an interesting problem. Different languages seem to be telling us different stories about the mind. For example, important distinctions made in one language are not necessarily made in others. What are we to make of these cross-linguistic differences? How do they arise? Are they created by purely linguistic processes operating over the course of language evolution? Or do they reflect fundamental differences in thought? In this sea of differences, are there any semantic universals? Which categories might be given by the genes, which by culture, and which by language? And what might the cross-linguistic similarities and differences contribute to our understanding of conceptual and linguistic development? The kinds of mapping principles, structures, and processes that link language and non-linguistic knowledge must accommodate not just one language but the rich diversity that has been uncovered. The integration of knowledge and methodologies necessary for real progress in answering these questions has happened only recently, as experimental approaches have been applied to the cross-linguistic study of word meaning. In *Words and the Mind*, Barbara Malt and Phillip Wolff present evidence from the leading researchers who are carrying out this empirical work on topics as diverse as spatial relations, events, emotion, terms, motion, events, objects, body part terms, causation, color categories, and relational categories. By bringing them together, Malt and Wolff highlight some of the most exciting cross-linguistic and cross-cultural work on the language-thought interface from a broad array of fields, including linguistics, anthropology, cognitive and developmental psychology, and cognitive neuropsychology. Their results provide some answers to these questions and new perspectives on the issues surrounding them.

Gumperz who ranges over his long career trajectory and reflects on his scientific achievements and how they relate to the contemporary linguistic scene. In this way, the reader is presented with a snapshot introduction to Gumperz's work in a contemporary context. A number of commentaries provide a stimulating and illuminating series of theoretical and applied encounters with Gumperz's work from different perspectives. In so doing, they shed new light on Gumperz's seminal contribution to the study of language and interaction. In his Response Essay and in a final discussion, Gumperz clarifies his views on many of the topics discussed in the volume, as well as sharing with readers his
