Economics as Social Science Roberto Marchionatti, Mario Cedrini, 2016-10-14 There is a growing consensus in social sciences that there is a need for interdisciplinary research on the complexity of human behavior At an age of crisis for both the economy and economic theory economics is called upon to fruitfully cooperate with contiguous social disciplines The term economics imperialism refers to the expansion of economics to territories that lie outside the traditional domain of the discipline Its critics argue that in starting with the assumption of maximizing behaviour economics excludes the nuances of rival disciplines and has problems in interpreting real world phenomena This book focuses on a territory that persists to be largely intractable using the postulates of economics that of primitive societies In retracing the origins of economics imperialism back to the birth of the discipline this volume argues that it offers a reductionist interpretation that is poor in interpretative power By engaging with the neglected traditions of sociological and anthropological studies the analysis offers suggestions for a more democratic cooperation between the social sciences Economics as Social Science is of great interest to those who study history of economic thought political economy and the history of economic anthropology as well as history of social sciences and economic methodology

Theoretical Perspectives on Cognitive Aging Timothy A. Salthouse, 2016-03-23 The phenomenon of age related cognitive decline has long been controversial both in terms of mere existence and with respect to how it is explained Some researchers have dismissed it as an artifact of declining health or lower levels of education and others have attributed it to general changes occurring in the external environment Still other interpretations have been based on the use it or lose it principle known as the Disuse Hypothesis or on the idea that there are qualitative differences in either the structure or the process of cognition across the adult years Perhaps the most popular approach at present relies on the information processing perspective and attempts to identify the critical processing component most responsible for age related differences in cognition The primary purposes of this book are first to review the evidence of age related differences in cognitive functioning and then to evaluate the major explanations proposed to account for the negative relations between age and cognition that have been established Included is a discussion of theoretical dimensions and levels of scientific theorizing assumed to be helpful in understanding and evaluating alternative perspectives on cognitive aging The various perspectives are then covered in detail and analyzed The text concludes with observations about the progress that has been made in explaining cognitive aging phenomena plus recommendations for research practices that might contribute to greater
