Bitterroot River - Montana, USA Gary David Blount, Normal 0 The headwaters of the Bitterroot River originate from two major Head Waters. The East Fork of the Bitterroot River originates from the Sapphire Mountains and Anaconda-Pintler Wilderness Areas. The West Fork of the Bitterroot River originates from the Bitterroot Mountains and the Selway-Bitterroot Wilderness Areas. The West Fork of the Bitterroot River was dammed in the early 1900's, creating Painted Rocks Reservoir. Below Painted Rocks Reservoir lies the tail water fishery section of the West Fork of the Bitterroot River, which flows downstream to its confluence with the East Fork of the Bitterroot River north of the town of Conner, Montana. The East Fork of the Bitterroot River is still a free flowing stream. The Wild Fires of 2000 burned much of the timberland in the headwaters of both drainages. During spring run-off and summer thunderstorms, the East Fork of the Bitterroot River turns turbid from the ash that is washed into the river from the tributaries flowing into the river. The West Fork of the Bitterroot River, however, remains clear. Painted Rocks Reservoir allows the headwater run-off to settle out within the reservoir before entering the West Fork of the Bitterroot River below the dam. The East Fork of the Bitterroot River confluence with the West Fork of the Bitterroot River forms the mainstem of the Bitterroot River, which flows northerly to its confluence with the Clarkfork River outside the city of Missoula, Montana. The Bitterroot River trout fishery has experienced depuration from mankind since the early 1900's, when Marcus Daly, The Copper King, and others commissioned the building of an extensive network of irrigation canals throughout the Bitterroot Valley. The largest canal is the Big Ditch, which runs northerly over seventy-five miles in length, traversing the eastside of the Bitterroot River Valley. They built large diversion dams across the Bitterroot River and diverted most of the tributaries in the Bitterroot Valley. These diversion dams dewater the Bitterroot River severely during the summer months. Most of the Bitterroot Tributaries become dry during critical spawning periods for Rainbow Trout, Westslope Cutthroat Trout, Brown
