Software And Compilers For Embedded Systems 7th International Workshop Scopes 2003 Vienna Austria September 24-26 2003 Proceedings:

Software and Compilers for Embedded Systems Andreas Krall, 2003-09-16 This book constitutes the refereed proceedings of the 7th International Workshop on Software and Compilers for Embedded Systems SCOPES 2003 held in Vienna Austria in September 2003. The 26 revised full papers presented were carefully reviewed and selected from 43 submissions. The papers are organized in topical sections on code size reduction, code selection, loop optimizations, automatic retargeting, system design, register allocation, offset assignment, analysis and profiling, and memory and cache optimizations.

Software and Compilers for Embedded Systems Andreas Krall, 2003-09-16 This volume contains the proceedings of the 7th International Workshop on Software and Compilers for Embedded Systems SCOPES 2003 held in Vienna Austria September 24-26 2003. Initially the workshop was referred to as the International Workshop on Code Generation for Embedded Systems. The first workshop took place in 1994 in Schloss Dagstuhl Germany. From its beginnings the intention of the organizers was to create an atmosphere in which the researchers could participate actively in dynamic discussions and profit from the assembly of international experts in the field. It was at the fourth workshop in St. Goar Germany in 1999 that the spectrum of topics of interest for the workshop was extended and not only code generation but also software and compilers for embedded systems were considered. The change in fields of interest led to a change of name and this is when the present name was used for the first time. Since then SCOPES has been held again in St. Goar Germany in 2001, Berlin Germany in 2002 and this year 2003 in Vienna Austria. In response to the call for papers 43 very strong papers from all over the world were submitted. The program committee selected 26 papers for presentation at SCOPES 2003. All submitted papers were reviewed by at least three experts in order to ensure the quality of the work presented at the workshop. Software and Compilers for Embedded Systems Henk Schepers, 2004-10-29 This volume contains the proceedings of the 8th International Workshop on Software and Compilers for Embedded Systems SCOPES 2004 held in Amsterdam The Netherlands on September 2 and 3 2004. Initially the workshop was referred to as the International Workshop on Code Generation for Embedded Systems. The first took place in 1994 in Schloss Dagstuhl Germany. From its beginnings the intention of the organizers has been to create an interactive atmosphere in which the participants can discuss and profit from the assembly of international experts in the field. The name SCOPES has been used since the fourth edition in St. Goar Germany. In 1999 when the scope of the workshop was extended to also cover general issues in embedded software design. Since then SCOPES has been held again in St. Goar in 2001, Berlin Germany in 2002, Vienna Austria in 2003 and now in Amsterdam The Netherlands. In response to the call for papers almost 50 very strong papers were submitted from all over the world. All submitted papers were reviewed by at least three experts to ensure the quality of the workshop. In the end the program committee selected 17 papers for presentation at the workshop. These papers are divided into the following categories:

application specific co design system and application synthesis data flow analysis data partitioning task scheduling and code generation In addition to the selected contributions the keynote address was delivered by Mike Uhler from MIPS

Stuijk, 2020 The influence of embedded systems is constantly growing Increasingly powerful and versatile devices are

developed and put on the market at a fast pace Their functionality and number of features is increasing and so are the

constraints on the systems concerning size performance energy dissipation and timing predictability To meet all these

constraints multi processor systems on a chip MPSoCs are becoming popular in embedded systems In order to meet the

performance and energy constraints of embedded applications heterogeneous architectures incorporating functional units

optimized for specific functions are commonly employed This technological trend has dramatic consequences on the

parallelization mapping compiler and design technology used to develop these systems The SCOPES workshop focuses on the

software generation process for these modern embedded systems Topics of interest include all aspects of the compilation and

mapping process of embedded single and multiprocessor systems **Proceedings of the 13th International Workshop**
