Software Engineering Approaches for Offshore and Outsourced Development Olly Gotel,Mathai Joseph,Bertrand Meyer,2009-07-01 SEAFOOD 2009 Enabling Global Partnerships to Deliver on Business Needs Companies have been outsourcing areas of software development work for many years either because of the engineering challenges or because the outsourced aspect is not central to their core business A profound transformation has been affecting this model over recent years a massive transfer of development activities from the USA and Europe to a skilled labor force in service providing countries This transformation has been driven by the demands of a global business climate seeking to increase the value delivery of IT investment However the ability to realize this value can prove problematic in practice Of particular concern are the hidden costs of globally distributed models of working such as understanding and communicating the true business needs across organizational and cultural boundaries To address such issues offshore outsourcing requires different support from inhouse development and this means adapting familiar techniques processes and tools to this setting as well as perhaps creating innovative new ones Coupled with this industry transformation there is hence a pressing need to re-examine those software engineering approaches that either facilitate or impede this model of working With an inevitable focus on the economy in 2009 business decisions regarding the sourcing of software development projects will come under close scrutiny It will become increasingly critical to design global partnerships that both clarify costs and enable delivery on business needs

Software Engineering Approaches for Offshore and Outsourced Development Bertrand Meyer,Mathai Joseph,2007-09-22 This book constitutes the thoroughly refereed post-proceedings of the First International Conference on Software Engineering Approaches for Offshore and Outsourced Development SEAFOOD 2007 Zurich Switzerland in February 2007 The 15 revised full papers constitute a balanced mix of academic and industrial aspects and address topical regions such as processes education country reports evaluation and assessment communication and distribution as well as tools

Testing Code Security Maura A. van der Linden,2007-06-07 The huge proliferation of security vulnerability exploits worms and viruses place an incredible drain on both cost and confidence for manufacturers and consumers The release of trustworthy code requires a specific set of skills and techniques but this information is often dispersed and decentralized encrypted in its own jargon and terminology

The Use of Formal Specification of Software H.K. Berg,W.K. Giloi,2012-12-06 The notion that program design is an engineering task alleviating the software

crisis has been with us for about a decade With the recognized advantages of obeying to certain software design disciplines we are approaching the era of enforced system development standards which will ensure that end products will meet rigorous design requirements On the one hand advances in system architecture further the application of system development standards to software and firmware design and production On the other hand the growth in complexity of future system architectures in particular distributed systems with their special problems of cooperation and parallelism necessitate the use of rigorous specification and design techniques In addition to hampering the design process the lack of engineering techniques hinders research In many cases trial designs that are presented in abstract and informal terms do not force the designer to face the full problem spectrum and therefore may not sufficiently provide insight into the design process To prepare for the forthcoming discipline and to provide a snapshot view of recent advances in software and firmware engineering we organized in June of 1979 a seminar entitled The Use of Formal Specification of Software and Firmware The seminar took place at the Heinrich Hertz Institute Berlin and attracted over 60 participants most of them from the industry

another issue that needs to be addressed In many cases it has been found that compression and indexing can be successfully integrated since compressing the data by filtering out irrelevancy implies some degree of understanding of the content structure
