

Evaluating the potentials of PLSR and SVR models for soil properties prediction using field imaging, laboratory VNIR spectroscopy and their combination

1. Methodology

Soil spectroscopy performance varies depending on the physical and chemical properties of the soil, but it also depends on the instrumentation, dataset used (remote sensed image spectra/laboratory spectra), spectral range, and data analysis methods used to correlate reflectance data to soil properties.

Soil Properties Evaluation From Centrifugal Models And Field Performance:

Soil Properties Evaluation from Centrifugal Models and Field Performance Frank C. Townsend, 1988 Proceedings of a session at the ASCE National Convention held in Nashville Tennessee May 10 1988 Sponsored by the Geotechnical Engineering Division of ASCE This Geotechnical Special Publication contains eight papers on the evaluation of soil property values The performance of geotechnical projects is dependent upon the appropriateness of the design theory to the boundary conditions and the characterization of the soil properties used in the theory These papers assess the reliance of soil property values as verified by field or centrifugal model observations The papers on centrifugal modeling examine slope stability assessment due to phreatic surface elevations and surcharge loadings on the slope crest Centrifugal modeling was also used to evaluate settlements and capacities of shallow footings and large deformation consolidation of waste clays Field performance papers discuss pile load test verification of designs based upon in situ tests In addition in situ tests were used to characterize seismic resistance while visual observations evaluated braced cut performance **Dynamic Geotechnical Testing II** Ronald J.
