Solar Electricity An Economic Approach To Solar Energy:

Solar Electricity Wolfgang Palz,1978 *Solar electricity; an economic approach to solar energy* W. Palz,1978 *A Solar Manifesto* Hermann Scheer,2021-12-16 In the decade since the Earth Summit in Rio de Janeiro the response of the world's governments and authorities to the threats to the global environment has been to enforce the reduction of energy consumption and harmful emissions solutions primarily based around conventional energy resources and conventional thinking The question is though whether this strategy is radical enough to address the key challenges how facing the environment and whether it can be effective in avoiding catastrophe on a global scale For Herman Scheer the answer is a definite no In this fully updated edition of *A Solar Manifesto* he once more attacks the lack of political will to find answers outside a conventional frame of reference Climate change pollution deforestation destruction of the ozone layer poverty and the population explosion are all problems created or exacerbated by the use of conventional energy Seven years after the first edition of this book answers are now more urgently required than ever as current policies serve merely to alleviate the escalating symptoms rather than attempting a cure for what could become a terminal affliction Herman Scheer shows that this crisis may yet be reversed but it can only be made to happen through a fundamental change in political and economic strategies paving the way towards a global solar energy economy sustained by new social principles *A Solar Manifesto* champions the replacement of fossil and nuclear fuels with solar energy as a real solution to the threat to the environment and associated social consequences Scheer constructs a radical yet innovative political and economic model and argues the case with passion and conviction for the global solar economy as the route to a sustainable environment Thought provoking and profoundly challenging this book will be an inspiration to anyone concerned with energy and the global environment

The enormous public interest of specialists as well as of engaged and concerned citizens in the energy problem can be understood in view of the fact that the future of national and world wide economy depends on the availability of sufficient primary energy. The questions arising are which forms of primary energy exist principally, by what means and at what cost can they be brought to useful application and what is their possible role in the present and future energy scenario. Another reason which may not be so obvious but which eventually may prove to be of great importance as far as public acceptance of energy technologies is concerned lies in the fact that the existing conscious or subconscious fears arising from confrontation with scientific and technological progress to which even for the educated layman intellectual access is difficult have been sublimated onto the energy problem and especially onto the problem of nuclear energy. Unlike other developments the emergence of nuclear energy has brought to our notice the ambivalence of advancing science and technology which may either be used peacefully or misused militarily. Nuclear energy can help to overcome the increasing hunger for energy in the world but it can also lead to the extinction of human life from the surface of this planet. More and more mankind is confronted with chances and risks of new discoveries.
