What Does It Mean to Have an Invisible Condition? Eilidh Cage,Danijela Serbic,2021-12-27 There are many people who experience invisible and often undiagnosed disabilities and conditions which affect their everyday lives On the surface it might not be immediately obvious that someone perhaps has a different way of thinking experiencing or processing the world around them Having an invisible disability usually means that it is difficult to provide concrete visible evidence for it and it can be perceived as not real by other people Indeed some individuals can often be made to feel they are not good enough and may end up masking or hiding their difficulties in order to just get by in day to day life without being judged In this collection we introduce and educate Young Minds about a range of invisible conditions for example mental health conditions like Post Traumatic Stress Disorder autism chronic pain conditions intellectual disabilities stuttering and many others We also highlight some of the wider challenges faced within society such as the lack of understanding from other people and discuss how Young Minds can potentially support their friends and family who might be experiencing some of these disabilities or conditions This collection covers what Young Minds could learn about what it means to have an invisible condition and how it can impact on relationships education thinking communication emotions behaviours and generally navigating everyday life Further some people might be unwilling to seek help and share their concerns with others because they are worried that others don t really understand what life is like for them We hope that this collection helps those without an invisible condition to think carefully about how they can make the world a more supportive and inclusive place for everyone
