Subcellular Biochemistry J. Robin Harris, 2013-11-11 In Volume 25 leading experts present studies on the value of increased ascorbic acid intake and explore its specific contributions to human and animal health Intracellular Parasites José-Luis Avila, J. Robin Harris, 2013-11-11 Volume 18 of the Subcellular Biochemistry series which specializes in various aspects of the biochemistry of the intracellular parasites was initially proposed by Jose Luis Avila and strongly supported by myself as Series Editor of Sub cellular Biochemistry Considerable assistance was received from Professor Frank Wunderlich University of Dusseldorf and more particularly from Dr Michael Miles London School of Hygiene and Tropical Medicine during the compilation of the list of possible chapters Our initial aim was to present a comprehensive survey of this broad field of study Although some interesting topics have been lost due to authors backing out late in the production schedule of the book the manuscripts that were submitted have provided a useful over view of the subject with notable strength within the field of Leishmania The 13 chapters of the book have been grouped according to subject The first five chapters deal with Leishmania and are followed by two chapters on Try ponosoma cruzi two on the malarial parasites and two on the Coccidia The fmal two chapters cover the Microsporidia and chemotherapy respectively **Physicochemical Methods in the Study** of Biomembranes Herwig J. Hilderson, Gregory B. Ralston, 2013-11-11 In mammalian cells many physiological processes rely on the dynamics of the organization of lipids and proteins in biological membranes The topics in this volume deal with physicochemical methods in the study of biomembranes Some of them have a long and respectable history in the study of soluble proteins and have only recently been applied to the study of membranes Some have traditionally been applied to studies of model systems of lipids of well defined composition as well as to intact membranes Other methods by their very nature apply to organized bilayers comprised of both protein and lipid Van Meer and van Genderen provide us with an introduction to the field Chapter I From their personal perspective regarding the distribution trans port and sorting of membrane lipids they formulate a number of biologically relevant questions and show that the physicochemical methods described in this book may contribute in great measure to solving these issues The methods of analytical ultracentrifugation have served faithfully for 60 years in the study of water soluble proteins. The use of detergent extraction of membrane proteins and the manipulation of density with H20 D20 mixtures has extended this technique to the study of proteins and in particular their interactions from biological membranes As described by Morris and Ralston in Chapter 2 this technique can be used to determine a number of important properties of proteins Mycoplasma Cell Membranes Shlomo Rottem, Itzahak Kahane, 2012-12-06 The mycoplasmas a trivial name used to denote organisms included in the class Mollicutes are a group of prokaryotic organisms comprising more than 120 species distinguished from ordinary bacteria by their small size and the total lack of cell walls The absence of a cell wall in mycoplasmas is a characteristic of outstanding importance to which the mycoplasmas owe many of their pecu liarities for example their morphological instability osmotic

sensitivity unique ion pumping systems resistance to antibiotics that interfere with cell wall bio synthesis and susceptibility to lysis by detergents and alcohols The fact that the mycoplasma cells contain only one membrane type the plasma membrane constitutes one of their most useful properties for membrane studies once the membrane is isolated it is uncontaminated with other mem brane types Another advantage in using mycoplasmas as models for membrane studies stems from the fact that their membrane lipid composition can be altered in a controlled manner This characteristic results from the partial or total inabili ty of the mycoplasmas to synthesize long chain fatty acids and cholesterol making mycoplasmas dependent on the supply of fatty acids from the growth medium The ability to introduce controlled alterations in the fatty acid composition and cholesterol content of mycoplasma membranes has been utilized in studying the molecular organization and physical properties of biological mem branes **Endocytic Components: Identification and** Characterization J.J.M. Bergeron, J. Robin Harris, 2013-11-11 In step with the rapid growth of research into the biochemical and functional characterization of the endosome Volume 19 surveys the recent advances in the methodological aspects of this field Coverage includes the use of free flow electrophoresis to define endosome subpopulations the endosomal compartments in rat hepatocytes the role of endosomes in transmembrane signalling and six additional articles Proteins: Structure. Function, and Engineering B.B. Biswas, Siddhartha Roy, 2013-06-29 Here researchers review the latest breakthroughs in protein research Their contributions explore emerging principles and techniques and survey important classes of proteins that will play key roles in the field s future Articles examine the possibility of a Boltzman like distribution in protein substructures the new technique of Raman spectroscopy and compact intermediate states of protein folding This well illustrated volume also features coverage of proteins that bind nucleic acids Comparative Animal Biochemistry Klaus Urich, 2013-04-17 tribute greatly to understanding the origins of The plan for this book goes back almost 20 years Already at that time it was possible to recognize organisms an extraordinary variation in metabolites and To provide the biochemist with a ready over processes superimposed upon the basic biochem view of the structural diversity of animals the book includes a simplified version of animal sys ical system of animals Each species each indi tematics for further information on the classifica vidual in fact each type of cell of the multicellu lar organism possesses its own biochemical char tion structure and life of particular animal spe acter and this molecular variety its biological sig cies the reader should consult the relevant text nificance and its evolutionary development books It is assumed that the zoologist reader has throw up many interesting questions The com a basic knowledge of biochemistry important general biochemical facts are in any case given for parative approach that has been so productive at many of the subjects covered the higher levels of complexity of morphology and physiology can also be used to great effect at I had already completed several chapters of the molecular level this book by the beginning of the 1970s Membrane Biogenesis A.H. Maddy, J. Robin Harris, 2013-11-11 Scientific reviews are now of two complementary types short very up to date articles as are found in the Trends series and the more traditional longer re views

which are more comprehensive but take longer to publish The Subcellu lar Biochemistry series belongs to the latter category where a number of reviews on a broad topic are collected together in the one volume It has been the aim of this volume to summarize the present state of knowledge of membrane assembly It is appreciated that some relevant topics have not been included and an editor s selection is restricted by the many calls on potential authors who are unable to meet all requests made to them The absence of a discussion of the roles of lipids is however a reflection of the fact that a recent volume in this series edited by Dr H 1 Hilderson has been devoted to this subject Vol 16 Intracellular Transfer of Lipid Molecules and readers are recommended to this source **Plant Genetic Engineering** B.B. Biswas,J. Robin Harris,2013-11-11 Eminent researchers provide broad coverage of plant molecular biology and genetic engineering detailing technological advances in plant cell transformation and responses This state of the art text includes coverage of molecular action of plant growth hormone signal transduction light mediated expression of genes and genetic engineering of crop plants and trees

Endoplasmic Reticulum N. Borgese, I. Robin Harris, 2012-12-06 In step with the surge of interest in the endoplasmic reticulum the current volume takes an integrated look at this functionally diverse organelle Coverage includes protein translocation and export lipid metabolism antigen presentation and many other subjects gleaned from such diverse fields as cell biology enzymology and membrane biochemistry immunology and signal transduction **Diet-induced Acvl** Modifications of Mouse Phospholipid Classes Alvin Berger, 1992 Cellular Fatty Acid-Binding Proteins II Jan F.C. Glatz, Ger J. van der Vusse, 2012-12-06 Twenty years have elapsed since cytoplasmic proteins exhibiting high affinity binding of long chain fatty acids were first identified Ockner et al Science 177 56 58 1972 These cellular fatty acid binding proteins FABPs are now well established to comprise a ligand defined group of macromolecules belonging to a family of cytoplasmic lipid binding proteins Unique features of the FABPs are the existence of distinct types of FABP and that these are found in a variety of tissues in remarkable abundance with some cells expressing more than one type The physiological significance of the FABPs has only partly been elucidated By increasing the cytoplasmic solubilization of fatty acids the cellular FABPs are considered to function primarily in intracellular fatty acid transport but may also be assigned important regulatory roles in cellular lipid homeostasis as well as in the modulation of cell growth and differentiation The broad interests in cellular FABPs has led to the organization of the 1st International Workshop on Fatty Acid Binding Protein held in Maastricht the Netherlands in 1989 Prompted by the success of the first meeting the 2nd International Workshop on Fatty Acid Binding Proteins which was held again in Maastricht on August 31 and September 1 1992 brought together scientific scpecialists in the field of FABP research for two days of intensive and fruitful discussion This volume is a collection of selected papers from this conference and thus provides the state of the art knowledge of cellular FABPs The contributors to this issue represent pioneering as well as new investigators and also reflect the multidisciplinary nature of research in this exciting and rapidly progressing field The FASEB Journal, 1991 The Ovary E. Y. Adashi, P. C. K. Leung, 1993 This authoritative and

contemporary reference provides the most up to date clinical and theoretical information available on ovarian physiology More than 75 of the world's leading experts in pertinent clinical and research areas examine all phases of the ovarian life cycle synthesizing molecular and cellular detail with classical physiology and pathophysiology in a highly organized manner
