SUBTECH '91 Society for Underwater Technology (SUT),2012-12-06 The concept of using flexible reelable pipe to transport liquids gases and vapours is not a new one As early as the 1940s a steel braided elastomeric pipeline was developed for the Allied Forces in order to transport fuels to support the Normandy Beachheads In fact the longest flexible pipeline ever constructed is likely to be that laid across the English Channel as part of Operation Pluto The methodology used to handle and instal such pipe is also not new Ellis 1943 London in an early patent specification identifies three basic objectives for a flexible pipelining method These are prefabrication of the pipe onshore coiling of the pipe on suitable drums or reels and using such reels to lay pipe from anchored or motorised barges The design concept for flexible pipe is also not a new invention given that flexible hoses and umbilicals have been in service for more than sixty years A break through was however achieved by the French Institute of Petroleum in the early 1970s when they developed an improved steel reinforced pipe structure having a high axial loading capacity which utilised corrosion and hydrocarbon resistant polymers to extend pipe service lifetime This early pipe design utilised established cable making techniques to apply steel armour and axially and radially reinforce alternating layers of polymer sheaths The pipe was primarily developed as a flowline for use in static seabed applications

Aspect '94 Society for Underwater Technology (SUT),2012-12-06 Aspect 94 is the most up to date and comprehensive assessment of the present and future of the pipeline systems industry It comprises papers from leading experts in all areas of pipeline engineering and technology As this book shows the last few years have seen great strides forward in the field of subsea pipelines Deepwater pipelines long distance pipelines and complex systems transporting hydrocarbons and fluids to and from marginal field subsea wellheads and templates are all being implemented without significant problems The pace of progress continues to accelerate in the subsea industry and the scope to make further improvements is constantly being explored Operators consultants suppliers and contractors are all researching developing and testing new techniques and ideas
