Steinbruner,2021-08-10 In this classic work John Steinbruner argues that the time is ripe for exploration of a new theoretical perspective on the decision making process in government He suggests that the cybernetic theory of decision as developed in such diverse fields as information theory mathematical logic and behavioral psychology generates a systematic but non rational analysis that seems to explain quite naturally decisions that are puzzling when viewed from the rational perspective When combined with the basic understanding of human mental operations developed in cognitive psychology the cybernetic theory of decision presents a striking picture of how decision makers deal with the intense uncertainty and fundamental value conflicts that arise in bureaucratic politics To illustrate the advantages of using cybernetic theory Steinbruner analyzes the issue of sharing nuclear weapons among the NATO allies *With and Against* Dominique Routhier,2023-10-24 The little known story of the Situationist International s struggle against the automation of everyday life No other art movement has so profoundly influenced radical politics as the Situationist International But beyond the clichés about its purported leader Guy Debord the society of the spectacle d tournament and d rive lies a more complex story about key historical shifts in the composition of capital work labor art and revolutionary theory during the 1950s and 60s With and Against reframes the history of the Situationist International as a struggle to come to terms with the then emerging ideologies of cybernetics and automation Through each of the book s four chapters Dominique Routhier dissects Situationist pamphlets documents artworks and objects that refract elements of a cybernetic hypothesis the theoretically hyperbolic belief that technological progress computers and automation make class struggle and the idea of revolution obsolete With equal attention to aesthetic detail and to the broader contours of political economy this book serves as a critical intervention in art history as well a call to reconsider more broadly the contemporary lessons of the most political of all artistic avantgardes *Automation, Communication and Cybernetics in Science and Engineering* 2015/2016 Sabina Jeschke,Ingrid Isenhardt, Frank Hees,Klaus Henning,2016-11-15 **Order in Chaos - Cybernetics of Brand Management** Oliver Errichiello,Marius Wernke,2022-08-11 Cybernetics is a science for understanding and systematically using information As a subject of cybernetics the brand is becoming increasingly important especially in times of acceleration and infinite global commodity markets Only those who are able to preserve their patterns in the age of change and adapt them again and again to the requirements of the times will survive Neither customer data nor creative ideas help here but a sound knowledge of the structural functioning of all living beings organic and social By bringing together brand sociology and management
