Kaufer, Brian S. Butler, 2013-11-26 The design arts from the design of buildings and machines to software and interfaces are associated with types of knowledge and performance thought to be structured modular and systematic Such arts have become increasingly prestigious in our technocratic society Since Aristotle the art of rhetoric was conceived as a loosely structured practical art thought to be limited in the extent to which it could mimic more precise subject matters The art of rhetoric has been controversial since classical times but its status has sunk even lower since the industrial revolution a point when civic cultures began to cede authority and control to the cultures of specialized experts Many sympathizers of rhetoric have resisted its decline by calling for a civic art of public discourse to stand in opposition to a technocratic specialized discourse that has come increasingly to disenfranchise the ordinary citizen This is the first book to question the rhetoric technical knowledge split from a more fundamental perspective To get some perspective on what is at stake in rhetoric s traditional classification as a practical art the authors explore the distinction between practical and design arts enumerate the various criteria cited in the literature for qualifying a cluster of knowledge and performative skills to count as an art of design show how the knowledge and performative skills associated with the art of rhetoric meet the major requirements of

design knowledge propose a general architecture of rhetorical design one descriptive both of civic address and specialized academic argument turn to the Lincoln Douglas debates to embody and provide some empirical support and illustration for their architecture demonstrate how Lincoln and Douglas can be thought of as expert designers whose rhetoric is highly structured and modular and explain how the rhetoric of both rhetorical agents can be represented in the layers and modules that one needs to display plans for buildings software or other design artifacts These layers and modules are not just post hoc annotations of the debates they also illuminate new and systematic ways for viewing the debates and by implication other specimens of rhetoric in terms of strategies of artistic production Kaufer and Butler conclude their presentation by citing some of the research and educational implications that follow from housing rhetoric within the family of design arts

Carlopio, 2010-03-17 Strategy by Design illustrates how to use many of the principles processes and tools of the design profession to create innovative break through organizational strategies World Of Risk: A New Approach To Global Strategy And Leadership Mark Haynes Daniell, 2004-05-27 This book takes a fresh and critical look at the leading sources of global risk terrorism disease crime poverty environmental damage and others and sets out a practical way to respond far better than we have to each risk area Drawing from his state of the art knowledge of global strategy as applied in the business world the author provides analysis insight realistic strategies and hope for a better way forward His foresight has already been demonstrated Early in the year 2000 he wrote Sadly the history of mass terrorism is just about to be written Even the US is no longer a safe haven from foreign or local terrorists US policing has done little to limit the operations of terrorist Osama bin Laden The vulnerability of large government and civilian buildings and even military targets has also contributed to an increase in the scale of potential harm Without a more informed set of strategies and better global leadership the catastrophe of 9 11 will only be a forerunner of many more disasters in the future We can do much better This important book shows us how **Design Computing** Brian Johnson, 2016-11-18 Design Computing will help you understand the rapidly evolving relationship between computing designers and the many different environments they create or work in The book introduces the topic of design computing and covers the basics of hardware and software so you don't need to be an expert Topics include the fundamentals of digital representation programming and interfaces for design the shifting landscape of opportunity and expectation in practice and
