Word Association Thematic Analysis Michael Thelwall,2022-05-31 Many research projects involve analyzing sets of texts from the social web or elsewhere to get insights into issues opinions interests news discussions or communication styles For example many studies have investigated reactions to Covid 19 social distancing restrictions conspiracy theories and anti vaccine sentiment on social media This book describes word association thematic analysis a mixed methods strategy to identify themes within a collection of social web or

other texts It identifies these themes in the differences between subsets of the texts including female vs male vs nonbinary older vs newer country A vs country B positive vs negative sentiment high scoring vs low scoring or subtopic A vs subtopic B It can also be used to identify the differences between a topic focused collection of texts and a reference collection The method starts by automatically finding words that are statistically significantly more common in one subset than another then identifies the context of these words and groups them into themes It is supported by the free Windows based software Mozdeh for data collection or importing and for the quantitative analysis stages This book explains the word association thematic analysis method with examples and gives practical advice for using it It is primarily intended for social media researchers and students although the method is applicable to any collection of short texts Approaches and Processes of Social Science Research Tshabangu, Icarbord, Ba', Stefano, Madondo, Silas Memory, 2020-12-18 For the social sciences the approach and processes in research are quite different The type of evidence that social scientists can collect is often very dependent on the method that has been used to gather the data The type of findings that can be discussed are often not straightforward at all and no easy comparison can be made with the natural sciences although this is not impossible The methodology in the social sciences has the same role as technology and lab techniques in the natural sciences as these need to be developed rapidly to account for the increasing complexity of the natural objects to be studied The methodologies in the social sciences need to go through an intense period of critique reflection and reformulation to consider the complexity of social issues under investigation Therefore the area of social sciences research and methodologies should continually be studied to advance the field Approaches and Processes of Social Science Research presents new research methodologies in the social science field and aims at providing a broad introduction to the methodology of social research in its main theoretical foundations as well as in its practical applications Readers will develop a critical thinking attitude about social problems which in turn will sharpen their analytic approach to research This book includes four main parts philosophical perspectives strategies for conducting research common approaches for handling and collecting data and critical aspects of research writing throughout the process While highlighting topics such as critical theory in research ethical issues research processes data analysis and more this book is ideal for researchers in the social sciences and practitioners stakeholders academicians and students interested in deepening their understanding of the ideas and the practices of social science research **Mixing Methods in Psychology** Zazie Todd, Brigitte Nerlich, Suzanne McKeown, David D.
