Bamhdi, 2023-12-07 Because of the growing reliance on software concerns are growing as to how reliable a system is before it is commissioned for use how high the level of reliability is in the system and how many vulnerabilities exist in the system before its operationalization Equally

pressing issues include how to secure the system from internal and external security threats that may exist in the face of resident vulnerabilities. These two problems are considered increasingly important because they necessitate the development of tools and techniques capable of analyzing dependability and security aspects of a system. These concerns become more pronounced in the cases of safety critical and mission critical systems. System Reliability and Security Techniques and Methodologies focuses on the use of soft computing techniques and analytical techniques in the modeling and analysis of dependable and secure systems. It examines systems and applications having complex distributed or networked architectures in such fields as Nuclear energy, Ground transportation systems, Air traffic control, Healthcare and medicine, Communications. System reliability engineering is a multidisciplinary field that uses computational methods for estimating or predicting the reliability aspects of a system and analyzing failure data obtained from real world projects. System security is a related field that ensures that even a reliable system is secure against accidental or deliberate intrusions and is free of vulnerabilities. This book covers tools and techniques, cutting edge research topics and methodologies in the areas of system reliability and security. It examines prediction models and methods as well as how to secure a system as it is being developed.

Optimization Models in Software Reliability Anu G. Aggarwal, Abhishek Tandon, Hoang Pham, 2021-09-29. The book begins with an introduction to software reliability models and techniques. The book is an informative book covering the strategies needed to assess software failure behaviour and its quality as well as the application of optimization tools for major managerial decisions related to the software development process. It features a broad range of topics including software reliability assessment and apportionment, optimal allocation and selection decisions and upgradations problems. It moves through a variety of problems related to the evolving field of optimization of software reliability engineering including software release time, resource allocating, budget planning and warranty models which are each explored in depth in dedicated chapters. This book provides a comprehensive insight into present day practices in software reliability engineering making it relevant to students, researchers, academics and practising consultants and engineers. Computer Safety, Reliability and Security Massimo Felici, Karama Kanoun, Alberto Pasquini, 2003-07-31. The European Commission emphasizes in its Fifth Research Framework the emerging generic dependability requirements in the information society stemming both from the ubiquity and volume of embedded and networked systems and services as well as from the global and complex nature of large scale information and communication infrastructures from citizens, administrations and business in terms of technologies, tools, systems, applications and services. The series of Conference on Computer Safety, Reliability and Security, Safecomp, contributes to satisfy these requirements by reviewing the state of the art, experiences and new trends in the relevant scientific and industrial areas. Safecomp is intended to be a platform for technology transfer among academia, industry and research institutions providing the opportunity for exchange of ideas, opinions and visions among experts. This year Safecomp celebrates the 20th anniversary, its first Conference having been organized in Stuttgart by EWICS, European

Workshop on Industrial Computer Systems in 1979 and we hope these Proceedings will contribute to the celebration by supporting Safecomp aims The Proceedings include the 25 papers that have been presented orally at the Conference and the full version of the 14 papers that have been presented as posters all of which were selected from 76 submissions Papers almost uniformly take up Safecomp topics dealing with the issues of Safety Assessment and Human Factors Verification and Validation Design for Safety Formal Methods and Security Software Reliability Assessment with OR Applications P.K. Kapur, Hoang Pham, A. Gupta, P.C.
