Baugh,Anne Miller Raymond,2003 Thirty seven essential articles from Learning Leading with Technology *The British National Bibliography* Arthur James Wells,2001 Pathways To Success Through Identity-based Motivation Daphna Oyserman,2015-02-27 Everyone can imagine their future self even very young children and this future self is usually positive and education linked To make progress toward an aspired future or away from a feared future requires people to plan and take action Unfortunately most people often start too late and commit minimal effort to ineffective strategies that lead their attention elsewhere As a result their high hopes and earnest resolutions often fall short In Pathways to Success Through Identity Based Motivation Daphna Oyserman focuses on situational constraints and affordances that trigger or impede taking action Focusing on when the future self matters and how to reduce the shortfall between the self that one aspires to become and the outcomes that one actually attains Oyserman introduces the reader to the core theoretical framework of identity based motivation IBM theory IBM theory is the prediction that people prefer to act in identity congruent ways but that the identity to behavior link is opaque for a number of reasons the future feels far away difficulty of working on goals is misinterpreted and strategies for attaining goals do not feel identity congruent Oyserman s book goes on to also include the stakes and how the importance of education comes into play as it improves the lives of the individual their family and their society The framework of IBM theory and how to achieve it is broken down into three parts how to translate identity based motivation into a practical intervention an outline of the intervention and empirical evidence that it works In addition the book also includes an

implementation manual and fidelity measures for educators utilizing this book to intervene for the improvement of academic outcomes

Learning Beyond Cognition Niels Kryger, Birte Ravn, 2007-06-11 *Learning beyond Cognition* goes beyond a merely cognitive understanding of learning. The concept denotes the ideological and mental formation of the individual as well as the individual's own shaping of an identity. *Learning beyond Cognition* expands on the notion of Building and the current debate about citizenship education. The book outlines contemporary educational policies and practices in Europe and other Western countries. The authors analyse dominating discourses and learning practices to identify their social and cultural grounding and potentials. The authors are experienced international scholars. This book is aimed to become an essential resource for researchers, teachers, students and policy makers who address the current challenges to learning.

How to Recognise and Support Mathematical Mastery in Young Children's Play Di Chilvers, 2021-07-12 This book explains how young children develop mathematically in their earliest years and shows the support and teaching needed by adults to accelerate their progress and attainment, helping them master mathematical concepts and skills. The practical guidance has been carefully developed over a number of years and is based on research undertaken with primary schools in Sheffield as part of the Talk for Maths Mastery initiative. It recognises that children's mathematical development is embedded within child-led play and connected to deeper levels of thinking and wider dispositions for learning. Maths is happening everywhere at any moment; we just need to keep an open mind, open eyes and listen. Including case studies, links to practice and reflective questions, the chapters reveal what mastery orientation looks like from the children's perspective in their learning and covers children's serve and return conversational talk, mathematical babies and their developmental momentum, schematic patterns of thinking, mathematical mark-making, child-led play, problem-solving, creative and critical thinking, how adults can support children's mathematical talk, thinking and mastery. This book will help all early years practitioners and teachers working with children throughout the EYFS and KS1 build their understanding, knowledge, experience and confidence of engaging in early mathematics.

Computer Tools and Problem Solving in Mathematics James H. Wiebe, 1993 Here is a complete overview of the use of technology in the mathematics classroom. James Wiebe focuses on the use of general purpose computer tools: spreadsheets, databases, word processors, graphics packages and programming languages for problem solving applications, revealing how each can be used to maximum advantage in math classes.

The Teaching and Learning of Mathematics at University Level Derek Holton, 2001-09-30 This is a text that contains the latest in thinking and the best in practice. It provides a state of the art statement on tertiary teaching from a multi-perspective standpoint. No previous book has attempted to take such a wide view of the topic. The book will be of special interest to academic mathematicians, mathematics educators and educational researchers. It arose from the ICMI Study into the teaching and learning of mathematics at university level initiated at the conference in Singapore 1998.

The Australian Mathematics Teacher ,2001 **Mathematical Reviews** ,1996 **Self-Concept, Motivation and Identity** Frédéric Guay,Herbert Marsh,Dennis M. McInerney,Rhonda G. Craven,2015-06-01 The concept of the Self has a long history that dates back from the ancient Greeks such as Aristotle to more contemporary thinkers such as Wundt James Mead Cooley Freud Rogers and Erikson Tesser Felson 2000 Research on the Self relates to a range of phenomena including self esteem self concept self protection self verification self awareness identity self efficacy self determination etc that could be sharply different or very similar Despite this long tradition of thinkers and the numerous studies conducted on the Self this concept is still not very well defined More precisely it is not a precise object of study but rather a collection of loosely related subtopics Baumesiter 1998 Also in the philosophical literature the legitimacy of the concept of self has been brought into question Some authors have argued that the self is not a psychological entity per se but rather an illusion created by the complex interplay between cognitive and neurological subsystems Zahavi 2005 Although no definitive consensus has been reached regarding the Self we emphasis in this volume that the Self and its related phenomena including self concept motivation and identity are crucial for understanding consciousness and therefore important to understand human behavior Self concept motivation and identity Underpinning success with research and practice provides thus a unique insight into self concept and its relationship to motivation and identity from varied theoretical and empirical perspectives This volume is intended to develop both theoretical and methodological ideas and to present empirical evidence demonstrating the importance of theory and research to effective practice
