Higher Education in the United States James J. F. Forest, Kevin Kinser, 2002-06-21 Surveys the changing landscape of American higher education from academic freedom to virtual universities from campus crime to Pell Grants from the Student Privacy Act to student diversity In the years following World War II college and university enrollment doubled students revolted faculty unionized and community colleges evolved Tuition and technology soared as did the number of first generation minority and women students These changes radically transformed the American system of postsecondary education Today that system is in trouble Its aging professoriate prepares for retirement but low academic salaries can no longer attract the best minds to replace them A flood of corporate dollars funds commercial research but money for basic research the seedbed of American scientific preeminence has dried up Colleges and universities also face heated competition with for profit education providers for students faculty and external financial support along with the costs of providing remedial education to growing numbers of students who are unprepared for postsecondary education Higher Education in the United States provides a comprehensive analysis of these issues and others that scholars and practitioners of higher education study discuss and grapple with on a daily basis

Coding Democracy Maureen Webb, 2020-03-17 Hackers as vital disruptors inspiring a new wave of activism in which ordinary citizens take back democracy Hackers have a bad reputation as shady deployers of bots and destroyers of infrastructure In *Coding Democracy* Maureen Webb offers another view Hackers she argues can be vital disruptors Hacking is becoming a practice an ethos and a metaphor for a new wave of activism in which ordinary citizens are inventing new forms of distributed decentralized democracy for a digital era Confronted with concentrations of power mass surveillance and authoritarianism enabled by new technology the hacking movement is trying to build out democracy into cyberspace Webb travels to Berlin where she visits the Chaos Communication Camp a flagship event in the hacker world to Silicon Valley where she reports on the Apple FBI case the significance of

Russian troll farms and the hacking of tractor software by desperate farmers to Barcelona to meet the hacker group XNet which has helped bring nearly 100 prominent Spanish bankers and politicians to justice for their role in the 2008 financial crisis and to Harvard and MIT to investigate the institutionalization of hacking Webb describes an amazing array of hacker experiments that could dramatically change the current political economy These ambitious hacks aim to displace such tech monoliths as Facebook and Amazon enable worker cooperatives to kill platforms like Uber give people control over their data automate trust and provide citizens a real say in governance along with capacity to reach consensus Coding Democracy is not just another optimistic declaration of technological utopianism instead it provides the tools for an urgently needed upgrade of democracy in the digital era

Deconstructing Digital Capitalism and the Smart Society Mel van Elteren, 2025-01-01 Today's critics of big online platforms tend to consider privacy breaches monopolistic practices and the deployment of surveillance technologies as the main problems Internet reformers suggest the answers to these issues reside in more and better regulations While the questions of privacy data and size are indeed important they are secondary however to a deeper set of concerns about platform ownership and control and who benefits from the current status quo This book examines these issues and offers an historical overview and in depth analysis of digital capitalism and its prevailing practices as it has become increasingly intertwined with various forms of online surveillance behavior modification and the delegation of managerial functions to algorithmic and automated systems in platform economies The approach taken extends to the wider array of data driven internet connected and automated systems that involve digital devices and technologies centered on three smart spaces the smart self the smart home and the smart city Antitrust and other regulatory measures by the European Union and the United States that are aimed at restraining platform capitalism are also discussed The focus in particular is on recent developments regarding artificial intelligence and their potentially harmful implications This is followed by a critical look at proposals for more far reaching institutional reforms revolving around the creation of forms of platform socialism that build partly on existing practices of platform cooperativism The book concludes with a diagnosis of the global situation among the competing digital empires the United States the European Union and China and considers whether or not under the present conditions any form of democratic platform socialism could materialize on a wider scale in the near future
