Recent Trends in Algebraic Development Techniques Jose L. Fiadeiro, 2003-07-31 The European conference situation in the general area of software science has long been considered unsatisfactory A fairly large number of small and medium sized conferences

and workshops take place on an irregular basis competing for high quality contributions and for enough attendees to make them financially viable. Discussions aiming at a consolidation have been underway since at least 1992 with concrete planning beginning in summer 1994 and culminating in a public meeting at TAPSOFT 95 in Aarhus. On the basis of a broad consensus it was decided to establish a single annual federated spring conference in the slot that was then occupied by TAPSOFT and CAAP ESOP CC comprising a number of existing and new conferences and covering a spectrum from theory to practice. ETAPS 98 the first instance of the European Joint Conferences on Theory and Practice of Software is taking place this year in Lisbon. It comprises five conferences: FoSSaCS, FASE, ESOP, CC, TACAS, four workshops, ACoS, VISUAL, WADT, CMCS, seven invited lectures and nine tutorials.

**Algebraic Foundations of Systems Specification** Egidio Astesiano, Hans-Jörg Kreowski, Bernd Krieg-Brückner, 2012-12-06. The aim of software engineering is the provision and investigation of methods for the development of software systems of high quality with correctness as a key issue. A system is called correct if it does what one wants if it meets the requirements. To achieve and to guarantee correct systems the need of formal methods with rigorous semantics and the possibility of verification is widely accepted. Algebraic specification is a software engineering approach of this perspective. When Liskov and Zilles Gutttag and the ADJ group with Goguen, Thatcher, Wagner and Wright introduced the basic ideas of algebraic specification in the mid seventies in the U S A and Canada they initiated a very successful and still flourishing new area. In the late seventies algebraic specification became a major research topic also in many European countries. Originally the algebraic framework was intended for the mathematical foundation of abstract data types and the formal development of first order applicative programs. Meanwhile the range of applications has been extended to the precise specification of complete software systems, the uniform definition of syntax and semantics of programming languages and to the stepwise development of correct systems from the requirement definitions to the running programs. The activities in the last 25 years have led to an abundance of concepts, methods, approaches, theories, languages and tools which are mathematically founded in universal algebra, category theory and logic.

*Advances in Water Pollution Research* B. A. Southgate, 2013-10-02. *Advances in Water Pollution Research* Volume 1 contains the proceedings of the International Conference on Advances in Water Pollution Research held in London in September 1962. The conference provided a forum for assessing advances in water pollution research and tackled a wide array of topics from biological extraction and accumulation in stream self purification to recovery and identification of organics in water as well as the effect of heated effluents on fish and the role of aquatic actinomycetes in self purification of freshwater streams. Comprised of 16 chapters this volume begins with a description of a working theory of the mode of action of biological extraction and accumulation in stream self purification. The discussion then turns to the oxygen regime and the processes of self purification in reservoirs with retarded discharge, the effect of current on the composition of biocenoses in flowing water streams and prediction of stream reaeration rates. Subsequent chapters focus on a small watercourse accidentally polluted by phenol.

compounds determination and charting of waste load in a flowing stream effects of domestic and industrial discharges on the ecology of riffles in Midland streams and effects of plants and animals on the conditions in freshwater streams with particular reference to their oxygen balance This book will appeal to practitioners and research workers with interest in the problems of water pollution

Spero and Kiki Smith      **The End of Gender** Shari L. Thurer, 2013-01-11 Gender isn't what it used to be. Categories are collapsing. What was deviant for baby boomers has become mainstream for their offspring like the coed who realizes she's bisexual but after a period of adjustment shrugs her shoulders and gets on with her otherwise mundane life. Gender as we once understood it is over and gender bending is the new beat. Men sport ponytails and earrings and teach nursery school; women flaunt tattoos and biceps and smoke cigars. In *The End of Gender* Shari L. Thurer argues that we are in the midst of a new sexual revolution. It is one where gender categories are blurring not just at the fringes of society but in mainstream lifestyle, media, fashion, and art. So why is this cultural phenomenon happening now? And what does it mean? In lively, non-technical language and with sometimes surprising case studies from her 25 years as a psychologist, Thurer answers these questions, bridging complex postmodern theory with cutting edge psychoanalysis.      **The Publishers Weekly**, 1972
