Nelson,2012-12-06 This book presents a mechanist philosophy of mind I hold that the human mind is a system of computational or recursive rules that are embodied in the nervous system that the material presence of these rules accounts for perception conception speech belief desire intentional acts and other forms of intelligence In this edition I have retained the whole of the fIrst edition except for discussion of issues which no longer are relevant in philosophy of mind and cognitive psychology Earlier reference to disputes of the 1960 s and 70 s between hard line empiricists and neorationalists over the psychological status of grammars and language acquisition for instance has simply been dropped In place of such material I have entered some timely or new topics and a few changes There are brief references to the question of computer versus distributed processing connectionist theories Many of these questions dissolve if one distinguishes as I now do in Chapter II between free and embodied
